Adoption.—Where children are lacking, or an adult son has died unmarried or childless, the family succession is provided for by adoption. The most usual course is to adopt a son. Sometimes—perhaps as a cheaper expedient—a daughter is adopted, and a son-in-law brought in for her. The adopted son is often a nephew, or is one belonging to the family of a near relative, or at least is of the same surname. In one case known to the present writer, adoption from another surname is forbidden under an ancestor's malediction. There is, however, no absolute rule on this point. An adopted son is, as to his rights and his duties towards his adoptive parents, in the position of a son by birth.

Property.—The father's discretion in the division of the family property is strictly limited, and any departure from use and wont would be checked by the collective opinion of the family expressed through the nearer relatives. Daughters do not inherit. The eldest son usually receives a larger share than any of his brothers, in view of his greater responsibility for the carrying out of the rites of filial piety ('Incense lamp fields'); but in this, as in other matters, custom seems to vary (cf. A. H. Smith, *Village Life*, 327). Sons of concubines take a smaller share than sons of the wife. If the family property has not been divided by the father among his sons before his death, they may continue to hold it in common, and to do so is a laudable evidence of fraternal harmony; or they may proceed to a division by mutual agreement. In this case, their mother's brother is considered a proper person to act as 'divider.' A part of the family property may be set aside to provide for the family's ancestral worship. Such property is held in annual rotation by the sons or their representatives, the holder for the year having to provide what is needed for the ancestral worship, while the remainder of the income falls to himself. In some wealthy families an endowment is also provided for the scholars of the family. Before alienating any family property, the seller is supposed to give his near relatives the option of buying.

3. The family and larger groups.—All families descended from a common ancestor recognize in that a bond of union, and a special kinship is recognized between persons who derive from a common ancestor not more than five generations removed. Among such kinsfolk, mourning is regulated according to the degree of propinquity. Theoretically, all persons of the same surname, however widely separated their native places may be, form one great clan. This clan system, though naturally of little influence except where members of the clan are in geographical proximity, is a very prominent feature of Chinese life. There are villages with hundreds or thousands of inhabitants, all of one surname, and tracing their descent from a common ancestor whose sons were the founders of the 'fathers' houses,' to some one of which each villager belongs. These 'fathers' houses' are distinct entities, and may be friendly or hostile to each other. It is, therefore, a matter of no small moment not only to belong to a powerful clan, but in it to belong to a 'father's house' which is powerful, the degree of its power being determined not by seniority, but by its numbers, wealth, or the official persons who belong to it. The bond of common ancestry is recognized, even though the descendants are not congregated in one village. A centre of union is found in the common ancestral temple or grave, although worship of the common ancestor is apt to decay unless there is common property the tenure of which depends on it. A family register is also kept; and to have his name erased from it is one of the greatest disgraces to which a Chinaman can be subjected. In connexion with the register there is an ingenious plan by which the generation to which a man belongs may be known from his family name. In mnemonic verses, chosen characters are arranged in a certain order, and each of these chosen char-

acters is appropriated to a certain generation, and forms part of the name of all the males belonging thereto. Mutual responsibility is a marked feature of Chinese life; senior relatives for their juniors, and the elders of a clan for its members.

4. Servants and slaves.—In the lower ranks, servants or hired workers are treated very much as being of the family, and take their meals with its members. In the higher ranks this is not so. There, on the one hand, servants show to their masters a ceremonious deference; on the other, they often exercise a freedom of intervention in their master's affairs, both of which are strange to Western manners. Slavery is by no means a prominent feature of Chinese life; though, even where it is unknown as such, there may be those who through stress of poverty have been sold, or have sold themselves, into service. A much more usual type of slavery is seen in the slave girls of well-to-do families. They are the property of their owners, and dependent for their happiness on the goodwill of their mistresses. They are distinguished from daughters of the house by not having their feet bound, and by some differences of attire. When they have grown to womanhood, they may remain in the family as female attendants, though this is rare, or be taken as concubines, or (more reputably) be disposed of in marriage, or as concubines to others. Eunuchs employed as slaves are unknown outside court circles.

5. Social changes.—China is in a state of transition, and the family also is sure to undergo change. Among the influences which may modify her social system are education, increased knowledge of other social systems, female education, changes in industrial conditions with the rise of manufactures, greater facilities for travel, the general shock of the recent revolution, and last, though not least, the spread of Christianity.

P. J. MACLAGAN.

FAMILY (Egyptian).—The Egyptian family presents many points of contrast both with the Semitic and with the Greek. Its most interesting characteristics are a distinct preservation of matriarchy, the prominent position of women, and a comparative promiscuity of sexual relations. We may, therefore, regard it as in some ways more primitive than the family in other countries of the ancient world. The prominent position of the women in the family led generally to a prominence of women in Egypt much greater than that allowed to them either among the Semites or in later Greece, and analogous to that apparently enjoyed in a greater degree by the women in early (Mycenæan) Greece. There also, among a people probably racially connected with the Egyptians, a matriarchal idea of the family may be assumed to have brought about a feminine prominence even more pronounced than in Egypt. It was no idea of the equal intelligence of women and men that in Egypt placed the two sexes almost on the same level, and in Minoan Crete perhaps made the women quite as important as the men. This equality arose simply from the matriarchal idea that descent is absolutely certain through the mother, but not through the father, so that the family centres in the house-mother rather than in the house-father; and the woman, instead of being the man's slave, as among the Semites, is in many respects his equal or even superior. But this view of family life makes at the same time for what we should regard as sexual immorality. Thus, at any rate in the royal family, the Egyptians, in order to secure the succession of the mothers in the same family, often married their own sisters. In Roman times we find this practice common among ordinary people.

The most important person in the family was, then, not the father, as among the Semites, but the mother. She was the house-ruler, the *nebt-per*, the focus of the family. Nevertheless, she was the inferior of the man, her husband, in that she was always mentioned after him: on the tombstones she is always the wife (*ḥemet*) of the man, he is never the husband (*zai*) of the woman. After all, she could not become *nebt-per* unless she were first *ḥemet*, and that, when all was said and done, depended on the pleasure of the man. So far the man dominated, but never as the Semitic man did, who was the *ba'al*, 'lord' of his wife, his *b*ᵉ*rî'ah*, 'chattel,' or as did the Greek man, who, like Hesiod (*Works and Days*, 403), regarded a wife simply as a necessary possession on a level with his ox and his plough; at Athens only the *hetairai* had any freedom or influence. But, on the other hand, the Semite preserved far greater privacy and holiness of the sexual relations. This agrees perhaps with the Egyptian character, which was and is naturally more open and frank than that of the Semite. Actual marriage with sisters was more or less confined to the royal house (with disastrous results to the Pharaohs), but the indefiniteness of the relations of the women of the family to the men is shown in the fact that the word *senet*, 'sister,' was used not only for the real sisters of a man, but also for his concubines, and even for his *ḥemet*, or wife. Similarly 'brother' might mean 'husband.' The woman who sits at the side of a man in some funerary sculptured group may be described as 'his sister, whom his heart loveth,' or as 'his beloved wife.' He might have many of these 'sisters' together with one wife (rarely two), or no wife at all; in that case there was no properly constituted *nebt-per*, for this only a wife could be. If there were two wives, one was the *nebt-per*; if two *nebut-per* are mentioned on a man's tombstone, it means either that the one succeeded the other in the dignity of house-mother, or that the man had maintained two separate establishments, which had no link save the fact that the same man maintained and fathered both. This a noble might do, and besides the regular 'houses' of his 'wives' he might also possess a *harîm* of concubines. But these had nothing to do with his family or families proper, however much he might favour his natural children. The father could, if he wished, make his son his heir, but this was somewhat opposed to usual custom, which, in accordance with the matriarchal theory, preferred that property should descend in the female line. Thus, ordinarily, it was to the eldest son of the man's eldest daughter that his goods went, and a man's maternal grandfather was considered more closely related to him than his own father. Naturally this elaboration of primitive custom was at war with all parental affection, and so the men constantly broke through it; those in high station, and, above all, the kings, consistently did so. It was rarely that a dead monarch was not succeeded by his own son.

The maternal line of descent had the effect of confusing families, so that the Egyptians had little idea of family history, of genealogies and pedigrees, and never developed the surname or 'patronymic.' Even tribal surnames were unknown. The ordinary man was the son born of his mother So-and-so. Only the man of better class is such-and-such a man's son, the son of him who begat him. Until quite late times the Egyptian traced no genealogy further back than three or four generations, even in the case of a noble house. It is only in the decadence, when Egypt was con-

scious of her great age, that she became interested in her past, and her children reckoned back the generations of men.

Marriage was effected by means of a properly drawn up legal contract, but of these we have none till the Greek period. There may have been, as in later times, a probationary year, after which, by a certain payment, the marriage might be annulled. The concubine, if free, no doubt was taken by force or came of her own accord; if a slave, she had no voice in the matter, and was sold to her master. Whether a slave-woman could legally be made a full wife we do not know. The king was subject to the same laws and customs in this regard as his subjects. In contrast to Assyria, where only one queen appears on the monuments, and only two or three are even mentioned during the whole course of the empire's history, the queen of Egypt is always mentioned, and always appears with her consort, who not infrequently derived his sole right to the crown from her, as in the case of Thutmosis (Thothmes) I. She is called the 'king's wife' simply, or the 'great king's wife,' to distinguish her from other and inferior wives; often she is both 'great king's wife' and 'king's mother' (*hemet-nsi ueret*, and *met-nsi*). The 'king's son' (*si-nsi*) might, were he the son of an inferior wife, conceivably have in his veins not a drop of the blood of his father's predecessors on the throne. In this case, his succession could only be assured by force if necessary. Thutmosis III. was related to Amonhatpe (Amenhetep) I. only through the female line, and was actually the son of an inferior wife, if not of a concubine. This last fact rendered his right to the crown so weak that, in order to give him a good claim, it was necessary to marry him to his aunt Hatshepsut, who was wholly of the blood-royal as the eldest daughter of a 'great king's wife' (but whose father, Thutmosis I., was not of royal blood at all). She kept her nephew in the background, herself assuming the royal dignity, not as queen merely but as actual 'king.' In spite of the pre-eminence of the *nebt-per* in the family, there was no precedent for Egypt being directly ruled by a woman; so, as Hatshepsut would have no lord and master in the kingdom, she was obliged to assume, officially, the dress and status of a man. The husband-nephew considered himself wrongfully kept from his rights, for, though the son of a concubine or inferior queen, his marriage with his aunt had at once legitimized his claim to the throne. By herself assuming the crown, Hatshepsut undoubtedly became in law and custom an usurper, and Thutmosis was legally justified in the punishment which he meted out to her adherents after her death.

Difficulties of a similar kind must have repeated themselves indefinitely in the homes of subjects, and yet Egyptian family life was very close and very affectionate. On his tombstone a man's immediate relatives, whether gone before him or surviving him, are all represented bearing the offerings to him and praying that the gods of the dead will give him the kingly funeral meats. The words 'love' and 'beloved' recur more frequently in Egyptian mouths than in those of any other ancient nation, for none, whether father, mother, brother, sister, son, or daughter, seems to have been unbeloved by the rest of his family, judging from the inscriptions of the tombstones. This must at times have been an artificial convention, of course (we may be sure that Thutmosis III. did not love his aunt Hatshepsut), but at the same time the convention would not have grown up had not the reality been there, and we obtain the impression in old Egypt of a very close and very loving family life. It is so still: the modern Egyptian is usually a fond father, though Islām has turned his relation to his wife into a tyranny (albeit often a kind one) which his forefathers did not know. The ancient Egyptian knew no other object in marriage than the possession of children by both man and wife in common; children came normally to all, whether prince or peasant, as one of the best of the good gifts of the gods, and, though not necessary to his soul's health after death, it was at least desirable that a man should have sons to make the funerary offerings and pray for the safety of their father's spirit in the under world. We have not, even in the funerary stelæ of ancient Greece, such constant insistence on family solidarity and affection as we see in the Egyptian gravestones, especially those of the Middle Kingdom; and in later times the same spirit is revealed in the repeated bas-reliefs in the tombs of el-Amarna, which show the heretical king, Akhenaten, with his sister-queen Nefert-iti and their little daughters, always together and represented as exhibiting the closest mutual affection. From Babylonia and Assyria we have nothing of the same kind; king Asshurbanipal is shown once feasting with his queen (with the head of his enemy, the king of Elam, hanging in a bush close by), but no sign of marital affection appears, and the king's children are never represented. The greater harshness of the Semitic nature and the more 'human' character of the Egyptians are very apparent when we compare their 'family life.'

Families were usually large, especially under the Middle Kingdom. No pressure of economic conditions existed, as in modern times, to act as a check upon the increase of offspring; there was subsistence for all, within reason. Only a king could, if he desired, bring an enormous number of children into the world, but we may be sure that not many cared to emulate Rameses II., who is said to have had two hundred children; one hundred and three of his sons and fifty-nine of his daughters are actually known to us. The descendants of these people formed an important body of princely parasites for centuries; reasons of policy would forbid such reckless conduct on the part of later monarchs. As in all societies in a similar stage of development (*e.g.* India and China to-day), pestilence and war served as the natural checks on a too prolific increase of the race. Death took early toll then, as it does now, of the Egyptians; and, though we have many instances of very aged persons, yet the funerary stelæ show how enormous a proportion of the population died young. The age of the deceased is never given, but we see from their representations that they were commonly young: children with the side-lock (see below) constantly appear in rows, one after the other, each with the epithet *ma'at-kheru* ('acquitted,' *sc.* of sin in the Hall of Osiris) or *uhem-'ankh* ('repeating life'), the usual equivalents of our 'deceased,' after its name. These representations of children, one often a head taller than the next, and so on, remind us of the rows of sons and daughters shown on the brasses of the 15th to 17th centuries in our churches. Of course, as in these modern brasses, all the children or other persons shown on an Egyptian stele are not dead; the whole family is shown, dead and living together, bringing offerings to the tomb of the owner of the stele.

The large number of children often caused confusion in family nomenclature. After the death of a child bearing a certain name, another might be born to whom the same name might be given, and both appear on the same stelæ of their parents. But very often two, sometimes many more, children living at the same time might bear the same appellation—a fact which makes the ancient genealogies often very difficult to unravel.

Children in ancient Egypt were differentiated

from their elders by a special mark—the manner of dressing their hair. Whereas, with the exception of the soldiers and often the peasants, the Egyptian men always shaved the whole head and wore wigs, the boys either shaved or close-cropped only part of it, leaving on one side a long lock, which was always carefully plaited in a pigtail hanging to the shoulder or below it. Sometimes the whole hair seems to have been worn gathered into this single thick pigtail over the ear. Rarely, and only under the Old and Middle Kingdoms, does the tail appear to have been worn at the back of the head. It was usually retained till manhood; sometimes we find portrait-figures of young men who wear both the natural pigtail and a wig, the former coming out of a hole in the latter! In later times the princes seem all their lives to have worn this lock, which marked their position as 'royal children' (in their case it seems sometimes to have been a representation of the lock rather than natural hair). The girls wore the same lock, but often in a number of small braids or not plaited at all, whereas that of the boy was always a single plait. And very often the girls did not shave the rest of the head, but wore the rest of their hair hanging down, the 'lock of youth' being simply tied separately at the side. On reaching womanhood a great wig was often worn on the top of the natural hair, though sometimes the women seem to have shaved their heads or cropped their hair short like the men, always, of course, wearing their long wig over it.

Children of both sexes usually wore no clothing whatever till the age of puberty, and even then the girls often wore nothing but a slight girdle. The mother was assisted in their care by the nurse (*men'at*), who was an important person in the family, and is commonly represented on the tombstones as a member of it. The ideograph of her name shows that she was primarily a wet-nurse or foster-mother. The name was transferred to male nurses (like our 'nurse'), and we find the great nobles who acted as tutors or governors of royal princes bearing it as their official title ('royal nurse').

We thus see that the love of the Egyptians for their children, the important position of their wives, and their interest in their families and dependants enable us to give a very full idea of the ancient Egyptian family and its life.

See also CHILDREN (Egyptian) and MARRIAGE (Egyptian).

LITERATURE.—Good general account in A. Erman, *Life in Ancient Egypt*, tr. Tirard, London, 1894, p. 150 ff. For the funerary stelæ, see Lange and Schäfer, *Grab- und Denksteine des mittleren Reichs*, Cairo Catalogue, Berlin, 1902; and Hall and Scott-Moncrieff, *Hieroglyphic Texts from Egyptian Stelæ in the British Museum*, pt. 2, London, 1912. The present writer has in this article used his general knowledge of the stelæ in the British Museum. For the reliefs of Akhenaten and his family, see N. de G. Davies, *Rock Tombs of El Amarna*, London, 1903 ff., and A. E. P. Weigall, *Akhnaton, Pharaoh of Egypt*, London, 1910. On the relationship of Thutmosis III. to Hatshepsut, the present writer's position is midway between that of Naville and that of Sethe and Breasted (see the long controversy in *ZÄ*, *passim*: the matter is not yet settled satisfactorily). On marriage with sisters at Arsinoë in Roman times, see U. Wilcken, in *Abhandl. k. preuss. Akad.*, 1883, p. 903.

H. R. HALL.

FAMILY (Greek).—**1. Position of women in society.**—The position of women in Athens in the 5th cent. B.C. and afterwards differs strikingly from their position in Doric States like Sparta, or in the earlier period pictured by the Homeric poems. The *Odyssey* presents Penelope as the honoured wife and queen; Arete is almost on the same plane as her husband Alcinous; and, when Telemachus is entertained by Menelaus in the Spartan court, Helen takes precedence over her husband in caring for the guests, she corrects his mistakes, and her advice is followed in the questions under discussion. In *Il.* xxiv. 200 ff. we find Hecuba present with the men in council, as was Arete in the council of the Phæacians (*Od.* xi. 335). The princes of these poems have each one wife, though they may also have concubines, and the wife shares her husband's position before the world.

While in the Sparta of later days women shared the respect paid to men, since in bearing children they also performed a great duty to the State, the condition of affairs in Athens was decidedly different. Normally a woman could not appear before the courts, but must be represented by her husband or her guardian; in fact, her position legally was almost comparable with that of a slave. Unfair as it would be to accept the estimate of comedy or of such a poet as Euripides, still the whole trend of literature, history, and philosophy, as well as poetry, points to the subordinate place of woman in Athenian life. Her sphere is the home; and, although she is not locked up in an Oriental *harîm*, her life is compared with that of a tortoise in that it is restricted to the home (Plut. *Mor.* 142 B). Silence becomes her, even in her husband's presence; she does not meet his guests; nor is she in any sense his intellectual or social companion. Even in time of war the woman of position is not expected to leave the house without her husband's knowledge or without proper attendants. Under these restrictions she might visit women friends near by, she was expected to attend certain religious festivals, mainly festivals of women, and she performed rites in honour of the dead. In the home the entire administration of the household fell to her: the care of the stores, the arrangement of the meals, and, in particular, the direction of spinning and weaving to provide garments for the family. Her special duty was to care for the children, boys up to the age of eight or ten, and girls till they were married. It was this preoccupation with simple tasks and the seclusion in the house which prevented any real development of intellectual life among women, and consequently any ability to share the husband's intellectual life. Moreover, the education of girls before marriage was extremely limited (see EDUCATION [Greek]). It was primarily of a practical nature—training in morals and manners, in spinning, in weaving, and in the direction of the household. The intercourse even with other girls was limited, and it was only on the occasion of some religious festival that a girl had any opportunity to see men other than her father and the slaves of the household. See, further, WOMAN (Greek).

2. The reasons for marriage.—Such being the position of women at Athens as daughters and wives, it is not strange that some brilliant women, of whom Aspasia is a typical example, should not have conformed to the standards of Athenian family life. It is not so strange at first sight that Athenian society gave great freedom to men, both unmarried and married, in matters of social morality, as it is that the family thus strictly defined should have existed at all. The reason for the existence of the family and for the strictness with which daughters and wives were guarded is the same, namely, the importance of securing sons to continue the activities of the father in service to the State and to the gods. It is true that occasionally the need of a housekeeper is emphasized (Eur. *Alc.* 946 f.; Arist. *Eth. Nic.* viii. 14, p. 1162), but the house might have been managed, as a business was managed, through a competent slave. The Athenian married that he might have sons who would be recognized by law and religion. To them he might safely look for care in his old age, and in their activities he could see with satisfaction the continuation of the work to which he had devoted his life (Plato, *Symp.* 207). In rearing them he performed his best service to the State,

for citizenship was limited to men of legitimate birth; and the preservation of the reputation of the family in the State was a very strong incentive to good citizenship. In Sparta the fines for men who did not marry (Stob. *Flor.* lxvii. 16), in Athens the demand that statesmen and generals be married (Dein. *in Dem.* § 71), and the disgrace of daughters who did not find a husband (Soph. *Œd. Tyr.* 1500), illustrate the importance attached to this duty, which naturally is emphasized in Plato's philosophy of the State. Religion also demanded that a man marry and raise up sons to continue his line. The worship of the State-gods was carried on by legitimate citizens, and on this ground also Plato rests the duty of marriage (*Leg.* vi. 773 E). Further, certain forms of religious service were the duty and privilege of particular families, which must be kept up in order that this service may be performed. Finally, the wellbeing of the dead (of a man's ancestors, and his own wellbeing after death) depended on offerings by his descendants (Isocr. xiv. 60; Plato, *Hipp. Maj.* 291 E), so that actual or adopted sons (Isæus, vii. 30) were necessary to perform this important service.

3. **The choice of a wife** depends on this conception of marriage as a duty to the State, to the gods, and to one's self. A man's wife is ordinarily chosen by his father, who deals with the father of the proposed bride, and there is little or no opportunity for romance or individual choice, since ordinarily the girl has had no opportunity of seeing her future husband before betrothal, and hardly any opportunity before marriage. Even the consent of the parties themselves need not be asked, for the girl has no occasion to object, and the youth can have his income cut off if he does not agree. The picture of Hæmon and Antigone in Sophocles' *Antigone* is evidently an exception to the rule, even in literature. That marriage was conceived as a duty and arranged by the parents does not, of course, mean that in ancient Athens (any more than in modern countries where marriage is arranged by parents) the husband did not often come to have real regard and love for his wife.

The woman chosen for a wife must, of course, be the daughter of an Athenian citizen, for only the children of such a marriage would be legitimate. She might be, and often was, a near relative of her future husband. Usually the bride would be a girl between fifteen and twenty, unless, indeed, she were a widow; and her husband would be between twenty and thirty years of age. Her beauty would count for something, her skill in the feminine arts, such as spinning and weaving, for more; but the important thing was rather that her social position and her dowry should be comparable with the position and wealth of her future husband. The reason for this is simple, in that a woman with small dowry would often fail to win her husband's respect, while a wife with a very large dowry might make her husband very uncomfortable by interfering with his financial management of the property, if not with other sides of his life (cf. Plato, *Leg.* vi. 774 D; Plut. *de Educ. Puer.* 13 F; Arist. *Eth. Nic.* viii. 10. 5, p. 1161*a*). See, further, MARRIAGE (Greek).

4. **The family a religious institution.**—While marriage and the family were definitely legal institutions, the religious side must be clearly recognized. Like every other human institution, the family needed the divine blessing, and religious rites to obtain this blessing were not neglected even in times when belief in the gods became vague or insincere. Indeed, they could not well be neglected, for, in so far as the family was recognized by the State, it was a duty to the State to follow the customary rites in invoking the blessing of the gods. So far as the marriage ceremony was concerned, the religious rites attending it resembled in principle the religious rites attending any important undertaking. They consisted in sacrifices to the patron gods of marriage on the day before the wedding, and again in connexion with the wedding banquet. The choice of the gods to whom these sacrifices were offered, rather than the character of the sacrifices, was significant. Zeus and Hera, who, with local deities, were honoured in the preliminary sacrifices, were not only the patrons of marriage as a human institution, but also the gods whose relations represented the type of the human family in the Olympian circle. Similarly, the gods of the household and Aphrodite, who were honoured at the marriage feast itself, were the gods who watched over the relations of the new family. Just as the religious character of any Greek institution finds expression in the gods with whom it is associated, so the religious character of the family is seen in the nature of the gods invoked in the marriage ceremony.

Further, Greek religion was a matter of social groups like the family or the tribe or the State, before it was a matter of the individual. The worship of the family centred in Hestia (Vesta), the personified hearth-flame. At her round altar, hung with fillets, in the main room of the house, libations were offered at each meal, and she was recognized in connexion with every sacrifice that took place in the home. Other gods also were worshipped—Apollo the Guardian, whose symbol or altar stood outside the door; the patron gods of their race, whose shrine might be in a room off the main hall; Zeus Herkeios, whose altar stood in the court; and the gods of property like Zeus Ktesios; even gods from different shrines in the city might be represented by small images in the home. At all the events of family life, such as the birth of a child, the coming of age of a son, or in cases of sickness or death, the gods of the home were worshipped. On home anniversaries such as birthdays, and often on the occasion of public worship in the city, sacrifices were offered in the home. In a word, the Greek family was a religious institution, because every social institution in Greece was essentially religious.

5. **The relation of members of the family.**—The effort to ascertain from Greek literature the meaning of the family as an ethical institution is complicated by various difficulties. Pictures of private life are not found in the earlier literature, and we are left to deduce the facts from occasional allusions in philosophical writings and speeches, or from the exaggerations of comedy, or from the high ideal plane of tragedy. Xenophon's account of the training he proposed to give his young wife on marriage (in the *Œconomicus*) is a welcome exception, even if Xenophon can hardly be regarded as the type of an Athenian citizen.

If we go back to the Homeric poems, we find charming pictures of the intimate relations of husband and wife, in particular of Hector and Andromache (*Il.* vi.), of Alcinous and Arete (*Od.* vi.–viii.), of Odysseus and Penelope. In the words of Odysseus to Nausicaa (*Od.* vi. 180 f.; cf. Hesiod, *Erga*, 702), 'There is nothing mightier and nobler than when man and wife are of one heart and mind in a house, a grief to their foes, and to their friends great joy, but their own hearts know it best' (tr. Butcher and Lang).

In later literature the references to this subject are few but striking. It is Euripides who describes the chaste wife who makes the home life happy, so that the husband rejoices when he enters, and calls himself fortunate as he goes out (*Iph. Aul.* 1158 ff.). Euripides also speaks of the sweet deceit of a wife who softens the trouble and cheers the illness of her husband (frag. 819). In her husband's absence

it is her lot to suffer (Æsch. *Agam.* 861 f.); in his presence there is such complete trust and understanding that burdens are lightened (Soph. *Œd. Tyr.* 769 f., and *passim*). By the time of Aristotle the entire community of life between husband and wife is emphasized (Arist. *Eth. Nic.* viii. 14, p. 1162*a*, 19–29; cf. Isocr. iii. 40); and Plutarch (*Mor.* 59 F) names honour to the wife as one of the essentials of family life.

While these references in literature can hardly be regarded as pure imagination of poets and theories of philosophers, we must not fail to recognize the conditions which limited the development of such relations. In general it is clear that the possibilities of intellectual companionship were limited by the very restricted opportunities of the wife for any intellectual development. Where books hardly existed in the home, and where women never came in contact with any one but slaves, even if the latter were sometimes educated persons, they could not be expected to meet their husbands on common ground intellectually. Certain pleasures belonged to husband and wife in common—pleasure in the comfortable, well-regulated home and in the growing children; perhaps sometimes the pleasures of music. Common purposes and ideals they certainly shared so far as the sons and daughters were concerned. Of affection between husband and wife one can say but little. It seems hardly possible, however, that the pictures of affectionate husbands and wives in Greek tragedy could have been appreciated by the Athenian audience, or even conceived at all, if they had no counterpart in the actual life of the day.

The relation of parents to children is frequently referred to in literature. Three similes in the *Iliad* (iv. 130, xv. 362, xvi. 7) express the tender sympathy of the mother for her child. The joy of Æson in his son Jason and of Telamon in his son Ajax is described by Pindar (*Pyth.* iv. 120 f., *Isthm.* v.); the love of Creon for Hæmon, temporarily blinded by passion, in Sophocles' *Antigone*, the mother's joy in Cleobis and Biton (Herod. i. 31), and the pain Medea inflicted on Jason by killing their children (Eur. *Medea*), are examples that might be multiplied indefinitely. The reverse of the same thought is found in the pain when children turn out badly (Isæus, v. 39; Theog. 271 ff.); and, when this feeling of tenderness to children seems to be lacking, as in the case of Demosthenes, who placed the prosperity of the State above his personal loss in his daughter's death, it is a fit subject for public reproach (Æschin. *in Ctes.* 77).

The visible record of parental affection is preserved to us in the representations of mother and child on Attic vases, and in various representations of the family on Attic grave-reliefs. The duty of parents to bring up their children in right ways, and in particular to develop honour to the State and respect for parents, is ordinarily presupposed rather than stated explicitly (cf. Demosth. *Coron.* 22–23; Eurip. *Antiope*, fr. 219). This training in earlier years was supervised by the mother; and, as girls never passed out from the mother's immediate care till they were married, the relation developed between mother and daughter must have been an intimate one. The son early passed from his mother's hands to the schoolmaster, the training slave (παιδαγωγός), and, in less degree, to the father. As to any intimate relation of father and son, we know little except from the evidence of tragedy. It is clear, however, that both sons and daughters were trained strictly in the feeling for the unity of the family, with the duties and the privileges which this imposed.

The relation between brothers, and between a brother and a sister, is not infrequently mentioned from the Homeric poems onwards. The account of Agamemnon and Menelaus in the *Iliad* (iv. 148 ff., vii. 107) only serves to illustrate the general principle (*Od.* viii. 546). The affection of a brother and sister is best illustrated by the story of Electra and Orestes as it was developed in literature and in art.

The duty of children toward their parents is first a material one, namely, to care for them in their old age (Lysias, xiii. 45; Isæus, vii. 30). More broadly it is described as honour towards parents (Lycurg. *Leocr.* 94; and esp. Pindar, *Pyth.* vi. 23 ff.). Plato goes so far as to say that piety towards parents is the best worship of the gods (*Leg.* xi. 930 E ff.), and the absence of such piety was at Athens a legal bar from public office (Dein. ii. 17). For the Athenians the most repulsive phase of the Sophistic attack on moral ideals concerned this point (Aristoph. *Clouds*, 994 f.; Xen. *Mem.* iii. 5. 15), and the problems which arose for sons, when one parent was turned against another, as in the story of Eriphyle or of Clytæmnestra, proved extremely interesting to the Greeks.

Judged by the only data at our disposal—those of myth and literature and art—the unity of the family was the fundamental conception of Greek society and Greek morals. When the hold of other social and political institutions had begun to weaken, the family still retained its solidarity, and duties to the family were observed with care.

ARTHUR FAIRBANKS.

FAMILY (Hindu).—**1.** The family in India is of the *joint-family* type, and it is chiefly for this reason that the Indian family law differs so much from that of Europe. Its main principles were early reduced to writing in the well-known legal Sanskrit treatises called *Dharmaśāstras* or *Smṛtis*, all the more important of which have been published in English. This so-called Hindu law is still applied, throughout British India, in all questions relating to the inheritance, succession, and marriage of Hindus, to caste, and to Hindu religious usages or institutions.

2. The state of a family living in union implies a common habitation as well as community of property, of meals, and of cultus. It may be described, with H. Maine, as 'a group of natural or adoptive descendants held together by subjection to the eldest living ascendant, father, grandfather, or great-grandfather. The head of such a group is always in practice despotic' (*Early History of Institutions*, London, 1875, p. 116; cf. *Ancient Law*[10], do. 1907, p. 133). It should be added that, if the family chose to continue united after the father's death, the eldest son would generally become its head, as stated in the lawbook of Nārada: 'Let the eldest brother, by consent, support the rest like a father.' The position of such an eldest son managing the family estate is also a very influential one, though not equal in dignity to that of a father, whose power resembles the *patria potestas* of the paterfamilias in ancient Roman law.

Thus 'a wife, a son, and a slave, these three are declared to have no property; the wealth which they earn is (acquired) for him to whom they belong' (Manu, viii. 416). 'That is declared a valid transaction which is done by the senior or head of a family. That is not valid which has been transacted by one who does not enjoy independence' (Nārada, i. 42).

Even nowadays the manager (*kartā*) does not confine himself to the financial part of the household; there is not a single domestic affair of any

importance which may be undertaken without his consent or knowledge; and he is even expected to watch over the spiritual needs of all the members, and to check irregularities of all kinds by his sound discipline. The extent of his sway may be gathered from the facts that married sons in India, with their wives and children, generally choose to remain under the paternal roof, as they marry very early, and avoid the responsibility and expense of a separate establishment; that adopted and illegitimate sons may have to be added to the legitimate sons; that polygamy and concubinage are not forbidden, whereas the re-marriage of widows is objected to; and that a respectable Hindu is often obliged to support indigent relatives together with their families, as well as a hereditary family-priest and other hangers-on. It should be remarked, however, that the general body of an undivided family extends further than the coparcenary, which consists of the three generations next to the owner of certain property in unbroken male descent, and possesses a right of survivorship for all the descendants included in it.

3. The *eldest son* is not infrequently allowed by the father to manage the affairs of the family under his direction, and he may even himself become the *kartā* during the lifetime of the father, if the latter is advanced in years and unable or unwilling to continue to concern himself with matters of a secular nature. After the father's death, the eldest son, as mentioned before, will generally succeed him, though this is no invariable rule. The precept of Nārada is still occasionally followed, that even the youngest brother may govern the family if specially capable, because the prosperity of the whole family depends on ability. It is seldom, if ever, that more than one member of a family takes part in the management, though there is nothing to prevent such democratic methods of family government. The *kartā* is, however, liable to render an account; it has been so held by a full bench of the Calcutta High Court.

4. The *wife* of the manager, called *ghinni*, also occupies a responsible position, as she has to look after the inner department of the household, to see that every one is duly fed, to regulate her expenses according to the means of the family, to exercise a mild and prudent sway over her daughters and daughters-in-law and over the domestic servants, to get her daughters married at an early age, and have their nuptials properly celebrated. As for the task of educating her children, it would be a mistake to expect too much from a mother who herself is in most cases unacquainted with the barest elements of knowledge, entirely governed by religious notions of the crudest kind, and given to superstitious practices.

5. The *daughters* and *daughters-in-law*, whose attitude towards one another is not always that of strict harmony and peace, are not only subject to the control of the female head of the house, shut up as they are in the family *zenana*; they also labour under all the disadvantages and hardships incidental to the difficult position of females in an Eastern country. Thus a young daughter-in-law in a genteel family is regarded as immodest and unmannerly, if she should happen accidentally to enter the outer or male compartment of the house. No married female is permitted to leave the house, without having first obtained the sanction of the male or female head of the family, or otherwise than in a closed conveyance, either a *pālkī* or a carriage. Women take their meals after the men, and the choicest part of the food is first offered to the males, and the residue kept for the females.

6. Most women in India are strictly religious; the *ghinni* in particular hardly ever fails, after breakfast, to go through her morning service in the domestic place of worship, at the close of which she invokes the blessing of her guardian deity. All the inmates of the house, both male and female, are expected to be present at the daily *pūjā* performed by the hereditary priest of the family, and to make their obeisance to the stone or metal image of the tutelary god of the house. In rich families, a sufficient endowment in inalienable landed property is set apart for the permanent support of the idol.

7. From a legal point of view, the subject of *maintenance* is important, especially as this includes defraying the expense incurred for the nuptials and other religious ceremonies, or *saṁskāras*, of the younger male members of the family. Those who, owing to some bodily or mental defect, are disqualified from inheriting under the Hindu law have a claim to maintenance against the head of the house. Illegitimate sons and concubines are also entitled to be maintained.

8. *Partition* is another important subject. According to the 11th cent. *Mitākṣarā* (a well-known authoritative Sanskrit commentary), partition is the adjustment into specific portions of divers rights of the several members of a joint-family, *i.e.* the ascertaining of individual rights which during the joint condition—where the members share in food, worship, and estate—are not thought of. Partition, according to the same authority, may take place at the desire of a single male member, who is therefore at liberty, as far as he is concerned, to terminate the joint-tenancy, the other coparceners having to submit to it whether they like it or not. In Bengal, however, real partition may take place only after the father's death, when any co-sharer is at liberty to demand it. Such is the law as laid down in the 15th cent. *Dāyabhāga*, the author of which is supposed, in order to prevent the growth of disobedience by sons, to have deprived the latter of the right of enforcing partition against the father's wish. It appears probable that throughout India partition against the father's will was, down to very recent times, considered very much *contra bonos mores*, even where it was not forbidden.

9. The early Sanskrit lawbooks contain long lists of *secondary sons* who may be used to supply the place of a legitimate son, if the latter should happen to be wanting. This topic of the secondary sons (*gauṇaputra*) is also treated in the learned Sanskrit commentaries of later times, though all the various ancient modes of filiation had gradually become obsolete except the device of adoption, which has remained a highly important and vigorous institution down to the present day (see ADOPTION [Hindu]). Of the other subsidiary sons, the *kṣetraja*, or son of the wife, was the son begotten of one man's wife by another, after express authorization, the legitimate husband being childless and impotent, disordered in mind, incurably diseased, or dead.

Thus, in the Sanskrit Epics, King Saudāsa is reported to have induced the sage Vasistha to beget for him a son by his queen; and the two brothers Dhṛtarāṣṭra and Pāṇḍu, the ancestors of the chief heroes of the *Mahābhārata*, are said to have been begotten by the sage Vyāsa for King Vichitravirya. This custom corresponds in part to the *levirate* of the Israelites, and has been found to prevail among many nations of antiquity and recent times in all parts of the globe.

A son secretly born (*gūḍhaja*) from adulterous intercourse is also said to become the son of his mother's husband: if a pregnant young woman marries, her son belongs to the husband, and is called a son received with the bride (*sahoḍha*); and the son of a girl (*kānīna*), if she marries, becomes her husband's son; whereas, should she remain unmarried, he is reckoned as the son of her father. The latter principle is equally applicable in the case of the *putrikāputra*, or son of an appointed daughter, whose son became the son of her father, if the latter had no male issue. Somewhat peculiar

is the case of the *paunarbhava*, or son of a woman twice married, who appears among the secondary sons, because women, under the Brahman law of marriage, are not permitted to marry more than once—a prohibition which has only been removed by the English legislation of the last century.

10. The hankering after sons, which is evidenced by the recognition of these various substitutes for a real legitimate son, seems to have originated in the exigencies of a primitive state of society when male issue was greatly prized, because the prosperity of a family used to depend on the number of hands able to cultivate the family property; and the very existence of a tribe surrounded by enemies depended on the number of its male members capable of bearing arms. The happiness of a man even in the next world was connected with the existence of a continuous line of male descendants capable of making the customary offerings to deceased ancestors. Procreation by the father does not appear to have been a necessary element in the conception of sonship, and the chastity of women was not valued very highly.

11. It is not necessary, on the other hand, to explain these anomalies in the early family law of the Brahmans from a supposed universal practice of *polyandry* in ancient India, and to connect them with the polyandrous practices which are no doubt widely prevalent among the non-Aryan races of India. The well-known tale of Draupadī in the *Mahābhārata*, who became the joint-wife of all the five Pāṇḍava brothers, is the only instance of an Aryan woman said to have been the legal wife of several men, and the *Mahābhārata* itself represents the match of Draupadī as unusual and shocking. As for polyandry among non-Aryans, it exists, according to Risley and Gait's *Census Report*, both in the matriarchal form, where a woman forms alliances with a plurality of men not necessarily related to each other, and succession is therefore traced through the female, and in the fraternal, where she becomes the wife of several brothers.

Thus, among the Kannuvans of Madura, a woman may legally marry any number of men in succession, and may bestow favours on paramours without hindrance. Among the carpenter and blacksmith classes in Malabar, the four or five chosen husbands are said to be in the habit of celebrating their polyandrous marriage openly with much pomp. In the Malabar and Canarese *tarwāds* generally, a woman may freely associate with men unrelated to each other, so that the only family group is that of the mother with her children. The family is perpetuated by the female members only, and the person occupying the position of son to a man is the son of his sister. This is the *marumakathayam* law, lit. descent in the line of a nephew or sister's son, which is nowadays confined to the Nāyars or Nairs and other castes on the Malabar coast and in Travancore, but even there is falling into disrepute, and gradually passing into the fraternal form of polyandry or into monandry. The great facilities for divorce which exist in some parts of the Madras Presidency may also be viewed perhaps as a relic of, or akin to, matriarchal polyandry. The fraternal system is still widely spread along the whole of the Himālayan range, including Kashmir, as well as in some parts of S. India, *e.g.* among the Todas in the Nilgiris. In Kashmir the woman is regarded as the wife of all the brothers, as in the case of Draupadī, and the children call them all father.

12. In the Aryan marriage system of India, what strikes a European observer most is the well-nigh universal prevalence of the married state, which is brought about by the custom of *infant marriage* (see CHILD MARRIAGE [in India]). This custom, the gradual growth of which may be traced in the Sanskrit lawbooks, has gone on spreading from the higher castes to the lower till it has become almost universal. There is no greater opprobrium, at least in a genteel family, than to have a daughter unmarried at the age of puberty; hence no father dares run the risk of deferring his daughter's marriage till she is grown up. It may be supposed that the patriarchal power of the *kartā* was adverse, from the outset, to the female members of the family exercising the right of choosing their husbands for themselves. It may be hoped that the movement against infant marriage will gradually gain ground in India, though hitherto it has made but little progress.

13. The prohibition of *widow re-marriage*, which is said to be the social complement of infant marriage, is also a custom of ancient standing which has been spreading from the higher castes to the lower. Among the latter, however, it often meets with strenuous resistance, women being more of a power than in the higher castes, and naturally prone to set their influence against the obstacles placed in the way of their re-marriage. Among the upper classes, also, social reformers have been constantly advocating the propriety and necessity of widow marriage.

14. *Polygamy*, though permitted in the Sanskrit lawbooks, is rarely practised nowadays, the excess of wives over husbands not amounting to more than 8 and 7 in the thousand respectively among Hindus and Buddhists. It is quite unusual to take a second wife, unless the first wife should be barren or afflicted with some incurable disease; and, even then, a man has often to obtain the consent of his first wife, or of his caste *panchāyat*, or of both.

15. The *Śāstras* contain many curious rules regarding *prohibited degrees* in marriage, the principal rule being that bride and bridegroom should never belong to the same *gotra*, or clan (see CASTE, § 11). These exogamous rules are crossed by an endogamous principle, under which intermarriage between persons differing in caste is strictly forbidden (see MARRIAGE [Hindu]). In practice, any marriage may be said to be valid which has been celebrated in the presence, and with the presumed assent, of the relatives and leading members of the caste.

16. It should be observed, perhaps, that the otherwise strict rule against intermarriage between different castes is relaxed in the case of what has been called *hypergamy*, or 'marrying up,' *i.e.* the custom forbidding a woman to marry a man of a group lower than her own, and compelling her to marry into a group equal or superior in rank. This custom is both wide-spread and ancient, the Code of Manu styling marriages between men of a higher class and women of a lower class as according to the order of nature, while marriages of the converse type are unnatural. Social reformers have endeavoured to check the operation of the general rule against intermarriages by a proposed fusion of the existing sub-castes.

17. The universally prevailing custom of celebrating the *nuptials* with great pomp, and often lavish expense, may be cited as a proof of the importance and sanctity of marriage in the eyes of the people. Some of the ceremonies customary at a wedding are extremely ancient, and seem to have come down from Aryan times. It is true that *concubinage* is tolerated, both the concubine or female slave and the illegitimate son being mentioned in the Sanskrit Commentaries as members of a joint-family. Since the abolition of slavery, however, public opinion on this head has greatly changed; and it is only in the case of holders of *rājyās*, or large estates, or among very low-caste people, that concubines living as members of the family of the man keeping them may now sometimes be found. See also ADULTERY (Hindu).

J. JOLLY.

FAMILY (Japanese).—The earliest family system in Japan was that known as *uji*. This word is of the same origin as *uchi*, signifying 'interior' or 'household'; but from the earliest times it has been used exclusively in the sense of 'name,' especially the name of a clan. *Uji* existed from the most ancient times, and constituted the first units of Japanese society.

The organization of the *uji* was quite complex. It was not a matter of blood relationship alone, but of social, economic, and political interests as well. Originally but a few noble families possessed names and received recognition as *uji*. These *uji* included all the members of the given family, and were named after the favour of the Royal *uji*, the occupation of the family members, or the place of residence. As the numbers within the family increased, the branches were made subdivisions, called *ko uji*, or lesser families, under the authority of the central *uji*, *o-uji*, which in turn was governed by its *kami*, or superiors. Each central *uji*, with its various branches, formed a social body, for the most part sufficient unto itself; and its chief interest became that of self-preservation and self-perpetuation along clear and distinct lines.

As early as the reign of Suinin (29 B.C.), there were laws governing the names of *uji*; and the court carefully looked after their preservation, not allowing names once fixed to be changed except by special arrangement; and, later, establishing such historic *uji* as the Fujiwara, the Minamoto, and the Taira. As the offshoots of the various *uji* still further multiplied, they took various family names, often from the locality, such as Hōjō, Ashikaga, Tokugawa, etc. These names were known as *mioji* (the name of a descendant), as distinct from *uji*; but the use of even the *mioji* was not allowed to the common people until after the opening of the Meiji era in 1868.

As economic groups the *uji* were important. Occupations, trades, and professions were considered hereditary; and, while caste system in the strict sense never existed in Japan, very real bonds held a man to the calling of his father, whether that was the making of swords or the teaching of mathematics at the Government University of the time.

As political factors, the *uji* constituted the very material and machinery of government. Theoretically, the people of Japan were all included in the various branch *uji* of the central *uji*, of which the Emperor was the head; and the national administration, such as it was in those early days, was carried on for the most part through the *uji*. In course of time the large *uji* became very powerful, holding many in a kind of serfdom, and defying the central authority of the Court. Such a state of affairs led to the Taikwa reformation in A.D. 645, which sought to strengthen the Imperial authority by the overthrow of certain powerful *uji*, and the organization of provinces and prefectures as political units in their place. This system, copied from China, was not adapted to conditions in Japan at the time, and soon gave way before the influence of other rising families; but during those years the *uji* underwent modification, which led, by the latter part of the 12th cent., to a more complete development of what may be termed the patriarchal system.

In the *uji* the family, as including the members of one household merely, was merged to a great extent in the larger body of the clan, and possessed no real social influence; but in the patriarchal system its organization became more clearly defined and efficient. The patriarchal system reached its most complete development during the period of the *buké*, or warrior; and it remained practically unchanged for centuries, until the Restoration of 1868. The chief characteristic of the family under this system was the absolute authority of its head. A 'house,' consisting of relatives to the third or fourth generation, was governed by one head, who, of necessity a male but not necessarily the father or senior, exercised almost unlimited power over the property, personal conduct, and lives of his subordinates, the only check upon his actions being a council of relatives who held in sacred regard that which was deemed for the honour and best interests of the family. Both legislative and executive power belonged to the head of a family. He controlled the education of the children, the marriage of the young, the occupation of all. Ceremonies of all kinds were under his direction; and punishment even up to the extreme penalty of death was at his bidding. But this great authority was combined with great obligations; upon the head of a family devolved the duty of its support, and the maintenance of its honour under all circumstances.

Thus far we have considered the position mainly of the male members of the family. In the family of early Japan, the wife and daughter held by nature a place of greater influence and importance than was allowed after the coming of Confucian and Buddhist teachings, which won the allegiance of practically the entire country. Woman's duty became that of obedience to her father, her husband, and her son. She was literally given in marriage by her family; and, when married, she had to render absolute obedience to her husband's parents. Whatever property she brought became the possession of her new family; and there were seven reasons recognized by the law for any one of which she could be sent back divorced to her father's household—barrenness, adultery, disrespect towards father-in-law or mother-in-law, loquacity, theft, jealousy, and foul disease. Furthermore, in the family of the strong and wealthy, the wife, whatever her condition and character, was doomed to association with many concubines in proportion to her husband's prosperity and position.

Filial duty was the chief obligation, including that of revenge. When the head of a family, or a grandfather or grandmother, or a relative was injured or slain by one of another family, the duty of private revenge rested upon his subordinates, upon the children or grandchildren. This obligation was publicly recognized; and in its performance all conceivable obstacles were overcome and dangers met, even women feeling the necessity of obedience to this duty. Private revenge may be considered natural in an age and society where laws are not formulated or firmly enforced by organized government, especially in the country where the military ideal has commanded the respect and adoration of the people.

A sacred meaning was attached to the conception of family under this system. The individual was swallowed up in the common family life, not temporarily but permanently. The family, from its first ancestor to the latest generation, was a unit; and its unbroken continuance was all-important. The departed were regarded as still interested in the condition of the family, affected by its doings, and able to aid its undertakings. In a very real sense the past lived in the present, and was to be honoured by it. Ancestor-worship, while not peculiar to Japan but shared by all clan-peoples, attained among the Japanese a remarkable hold through this sense of family unity; and Shinto,

the most essentially Japanese of the faiths, developed at a time when the worship of ancestors was strong and vital. The deified spirits of ancestors, *uji-gami*, protected the home and made it a holy place sanctified by their presence.

Loyalty to the family of the past required that the family of the present should take thought for the family of the future. This perpetuity of the family was attained through the perpetuity of the family head. The eldest son and his eldest son preserved the family name, and so preserved the family. Thus the heir to the family headship was obliged to marry; and for him to die without a male descendant to continue the family and pay due respect to the spirits of the departed was a grave offence against the most sacred law of filial piety. Divorce of the barren and the taking of concubines were honourable if intended for this purpose.

Heirship in the family was not so much a matter of property as of birthright to the position of family head. From this fact grew the system of adoption, when no son was born to succeed to the family name. The adoption was preferably of a relative; but, if circumstances required, it might be of a stranger. The obligation which rested upon the head of the family, as representing the hallowed past, and as responsible for the present and the future, was great; and hence it was most important that he should be a man of real character and ability. From this consideration arose the custom of retirement, *inkyo*, by which one resigned his position as the head of a family to his son or another who should succeed him. This was very common, for various family reasons; and, in the case of influential or royal families, it took place, for political reasons, at the age of fifty, or even much earlier.

With the entrance of Western influence at the dawn of the Meiji era (1868) great changes began in the social and family, as well as business and political, life of Japan. Social changes, to be made safely, have to be made slowly; and many elements of the old patriarchal system are strongly operative to-day; but gradually the principle of individualism is gaining ground. The present Civil Code was compiled, after years of careful study in comparative legislation, by scholars and lawyers. It is modelled in many particulars upon German law, taking ancient customs into due consideration. It became operative on 16th July 1898. In the section concerning the family the old calculation of relationship is abolished; and relatives by blood to the sixth degree, husband and wife, and relatives by affinity to the third degree are recognized as forming a family. An adopted son is recognized as related to the other members of the family as a natural son would be. A 'house' is declared to be the sphere of its headship without regard to personality; and, with a view to putting an end to the objectionable custom of early retirement from active life, it is provided that the headship of a family shall not be resigned before the age of sixty. Furthermore, marriage is recognized as an act requiring formality, and is legalized upon report to the proper Government registrar. Mutual consent and judicial decision are recognized as conditions, one of which must obtain, in securing divorce. A legal agreement may be made concerning the property of husband and wife; but the official head of a family may manage the property of a wife—or of a husband if the head be a woman—unless a special arrangement be made. The wife is regarded as the representative of her husband in the ordinary domestic affairs of the home.

In spite of the spirit of the new laws and the changes which are taking place, it must be said that the country people and farmers still follow, in large measure, the old system in all matters of personal family influence, the young being fettered by the family authority of generations living and dead. Among the educated and in the great centres, on the other hand, the individualistic family of the English and American type, consisting of husband, wife, and children, is becoming the rule. There is everywhere a growing recognition of the individual; but beneath the apparent calm a bitter struggle is going on. Two principles are contending for supremacy: the principle of communism within the family—personal absorption in its interests; and the principle of personal freedom—the right of personal initiative and realization. The young men and women who have received a modern education are at present the greatest sufferers from the strife if, as often happens, they are forced by old customs into an uncongenial marriage, or, on the other hand, if they break too thoughtlessly into rebellion. Nevertheless, 'the old order changeth, yielding place to new.'

TASUKU HARADA.

FAMILY (Jewish).[1]—Though considerably affected on the legal side by non-Jewish environments, Jewish family life has retained, throughout the centuries, a distinct character to which Bible and Talmud contributed. The influence of the family relations has been one of the strongest religious and social forces, making for sobriety and purity, and forming an intimate bond between the individual and the community. Family solidarity, in its aspects of piety and altruism, led to the establishment at once of a private code of morality and a communal linking of the generations. On the one hand, the individual was merged in the family; and, on the other, the family was merged in the community. Every Jew found his joy and his sorrow in all Jews' joys and sorrows. He took a personal interest in the domestic life of the community, for the community was in a very real sense one united family. A marriage, a funeral, each was a congregational event. And, more generally, the social outlook of the whole was based on the virtue of the parts. The serenity and purity of the home worked outwards, and made the communal life pure and serene amid even the most sordid of external conditions. Family chastity, affection, piety, forbearance, and joyousness formed the base of the pyramid on which the communal life was securely erected. Hence the life of Jewry, in the Ghetto period, was independent of, and rose superior to, restrictions which must otherwise have proved demoralizing.

The whole of the family life was pervaded by religion; the home ceremonial in general and the special Sabbath and festival rites combined to make the table an altar. The commonest acts of the daily round were sanctified. The Sabbath in particular had this effect. The legalistic observance of its many restrictions was associated with a spirit of joy and beatitude. On the Sabbath eve the children were blessed—a custom which still widely prevails in Jewish homes.

'Before the children can walk, they should be carried on Sabbaths and holidays to the father and mother to be blessed; after they are able to walk, they should go of their own accord, with bowed body, and should incline their heads and receive the blessing' (Moses Henochs, *Brandspiegel*, tr. Hellprin, Basel, 1602, xliii.).

Jewish family life was based on this mutual reverence between parents and children. It was naturally founded also on law. The parent—especially the father—exercised authority over

[1] See also 'Jewish' sections of BIRTH, EDUCATION, MARRIAGE.

children during their minority (which, in important aspects, ended with the boy at the beginning of the fourteenth and with the girl at the beginning of the thirteenth year). Up to this date the father had power to give his daughter in marriage, though she had certain rights of repudiating (*mi'un*) such marriage. The general tendency has, however, been to postpone marriage until the girl has reached her majority, and the parental authority within the family thus becomes moral rather than legal. A first-century saying shows aptly the combination of the legal with the moral side of the father's influence:

'Our masters have taught, He who loves his wife as himself, and honours her more than himself; who leads his sons and daughters in the straight path, and marries them near their time of maturity;—to his house the words of Job apply (5^{24}), "Thou shalt know that thy tent is in peace"' (Bab. *Yebamoth*, 62*b*).

The child, in accordance with Biblical precept, was bound to honour his parents. This duty was far-reaching—the son was not to occupy the father's seat; he was not to contradict him, or call him by his name. The reader of David Qimhi's commentaries will recall the regularity with which this author cites his father as 'my lord, my father.' The son could be compelled to maintain his parents. The daughter was bound to honour her father and mother, but, as after her marriage she came under her husband's authority, she was not amenable to all the obligations which fell on the son. On his part the father was expected to teach his children, to have his sons apprenticed to a trade, and to avoid putting unnecessary strains on their respect. Thus the text, Lv 19^{14}, 'Thou shalt not put a stumbling-block before the blind,' was taken as a caution against striking a grown-up child (*Mo'ed Qaṭon*, 17*a*); the child might be tempted to retaliate with a passionate blow.

The confined quarters occupied by the Jews in the Middle Ages, as well as the survival of patriarchal sentiments, often led to the dwelling of the whole family, of several generations, under the same roof. After marriage, the bride's parents would frequently provide accommodation for the son-in-law. In the Orient the system sometimes leads to very complicated legal questions of ownership in the large houses occupied in common by many distinct coteries of the family. This system prevailed more extensively while marriages were contracted at an early age. But, though it was the father who mostly remained head of the family, the mother filled a high place in the esteem of her children and more remote descendants. We have a striking instance of this in the Memoirs of Glückel of Hamelin (17th cent.). After her husband's death (1689) she not only brought up her eight children, but carried on her husband's business. She travelled to the great fairs, and spent her days usually in the warehouse. Her influence over her children was extraordinarily complete, her piety no less than her capacity winning their love and veneration. No greater blow was dealt to the Jewish theory of life than was inflicted by such interferences as the *Familianten-Gesetz* which prevailed in Bohemia, Moravia, and Silesia in the 18th century. In those States no Jew could marry without a special permit from the Government. The avowed object was to prevent any increase of the Jewish population. The law was repealed in 1849, but in many parts of the world the problem of harmonizing Jewish with modern legal requirements has much modified the old family relations which, as Heine has made the modern world understand, turned the Jewish home into 'a haven of rest from the storms that raged round the very gates of the ghettos, nay, a fairy palace in which the bespattered objects of the mob's derision threw off their garb of shame and resumed the royal attire of freemen. The home was the place where the Jew was at his best. In the market-place he was perhaps hard and sometimes ignoble; in the world he helped his judges to misunderstand him; in the home he was himself' (I. Abrahams, *Jewish Life in the Middle Ages*, London, 1896, p. 113; see whole of ch. vii.).

I. ABRAHAMS.

FAMILY (Muslim).—The constitution of the Muslim family is very different from that of the Christian family; it is more indefinite, involved, and complicated. Marriage has not the same binding force; the ceremony is far less solemn—in fact, it is scarcely a public ceremony at all. A first marriage does not debar a man from a subsequent union, polygamy being quite legal; and, outside the married state, the husband is allowed to cohabit with an unlimited number of slaves. The status of the children of these concubines is identical with that of the children of the wedded wives, so that even marriage does not precisely decide the question as to the legitimacy of a child. Furthermore, a Muslim marriage is precarious: divorce is more easily obtained than in any Christian sect. Properly speaking, it is not really divorce that is admitted by Islām—it is the husband's right of repudiation, which he may exercise almost as he pleases. Muslim custom does not give the same social importance to marriage as we do: the wife, always secluded in her apartments, or veiled, does not appear in society at all. A guest or a host must never speak to a Muslim about his wives, or ask any news of them. The education of the children, which is the great family duty in Christianity, is reduced almost to vanishing-point in Islām, and is hardly a subject of interest at all to the parents. Finally, the family makes no effort, such as is made among Christian races, to perpetuate or increase its prosperity and glory from generation to generation; it is, especially in despotic countries, at the mercy of the prince's whims, and may pass in a day from wealth to poverty.

The rules controlling the constitution of the Muslim family are supposed to be laid down by the *Qur'ān*; but they are not found explicitly stated there, and accretions have been formed by custom. Muhammad formally sanctioned polygamy—for himself in particular, since he had several wives (nine, according to some traditions; fourteen, according to others), all of whom he regarded as legitimate; and he always had a revelation to justify these various marriages. But he did not approve of this large number of wives for the general mass of his followers. It is generally said that he forbade them to have more than four legitimate wives; the verse containing this rule, however, is not quite precise:

'If ye fear,' says the Prophet (*Qur'ān*, iv. 3), 'that ye cannot do justice between orphans, then marry what seems good to you of women, by twos, or threes, or fours,' that is, do not marry too many wives if you are not sure of being able to bring up the children.

Tradition has set this limit of four wives for ordinary believers, and has authorized the Khalīfs and Sultans, as successors of the Prophet, to have nine. Muslims are also allowed, according to the most generally accepted tradition, to have as many slaves as they choose, to use as concubines at a moderate fee; these slaves are often the women in the service of their legal wives, and hence arises a situation somewhat painful for the latter. This custom of unlimited concubinage does not appear

to be formally sanctioned anywhere in the *Qur'ān*; certain Muslims, indeed, do not think it conformable to the pure teaching of their religion. It is, nevertheless, a custom that has always had wide vogue in Islām, and is, no doubt, of ancient Persian origin. A large number of wives is one of the luxuries almost forced upon a personage of high estate by his position.

By legitimate wives are meant women of free or comfortable estate—*e.g.*, among the Turks, the daughter or wife of a Turk. Slaves would include the Circassians, Georgians, and at one time even the Hungarians, Poles, and Muscovites, bought as a rule through the medium of the Jews; and also prisoners of war. The husband has the right to free a slave and take her as his legitimate wife.

Marriage with a woman of free status, which is marriage properly so-called, takes place by means of intermediaries; the husband and wife do not see each other until their union is consummated. Friends of the two families meet together, a matron visits the girl and gives the young man as exact a description of her as possible, and, if the description pleases, the dowry is fixed. The latter is paid by the man; this is not only a custom, but a Qur'ānic law.

'Give women their dowries freely,' says the *Qur'ān* (iv. 3), 'and, if they are good enough to remit any of it to you of themselves, then enjoy it at your ease.'

The dowry really represents a purchase: it is the price paid by the man for his wife, and is handed over to the parents of the girl, who give her up. The wife has full control of the dowry—at least after the necessary furniture has been bought. There is a great contrast in this respect between the Muslim custom and what takes place in Europe, where it is difficult for a girl to get married without a dowry, and the husband ordinarily controls the wife's possessions.

The marriage contract is arranged before the *qaḍī*. The woman is not present at it, but is represented by her father, brother, or nearest relative, who accepts in her name the dowry which the fiancé undertakes to pay. It is this contract that legally constitutes the marriage; as may be seen, it is scarcely more than a simple declaration. After the contract, the parties go to the mosque, with the bride (veiled, of course) and a few relatives and friends, and the *imām* blesses the marriage. The woman is then taken to her husband's house; the wedding is celebrated by two feasts—one for the men and another in the women's apartments; and, at the end of the feast, the husband enters the nuptial chamber and sees his bride for the first time.

Muslim girls are married very early—usually at the age of from twelve to fourteen; sometimes they are betrothed when they are only three or four years old. Their parents are very anxious to have them married, and also re-married as soon as possible after being widowed or divorced. The state of celibacy, either for man or for woman, is scarcely a possibility in the Muslim world.

The *Qur'ān* (iv. 26 f.) indicates what classes of women it is unlawful to marry:

'Unlawful for you are your mothers, and your daughters, and your sisters, and your paternal aunts and maternal aunts, and your brother's daughters, and your sister's daughters, and your foster mothers, and your foster sisters, and your wives' mothers, and your step-daughters who are your wards, born of your wives to whom ye have gone in . . . and that ye form a connexion between two sisters . . . and do not marry women your fathers married.'

It will be noticed here that foster mothers are regarded as real mothers; as to the prohibition against marrying mothers, daughters, and sisters, it may have been necessary in consideration of the teaching of the Mazdæan religion, which allows incest. Mixed marriages, *i.e.* marriages with non-Muslims, are practically forbidden by the *Qur'ān* (ii. 220): it is better to marry a believing slave, according to Muslim opinion, than an unbelieving free woman; the same holds good of a husband. The rite of Abū Ḥanīfa, however, permits marriage with Christians and Jews.

The woman must obey and submit to her husband. Muhammad distinctly regards her as the inferior of man, and gives as one of the reasons of her inferiority that man uses his wealth to dower her (*Qur'ān*, iv. 38); he also holds that the masculine qualities are superior. He grants the husband the right to admonish a disobedient wife, put her into a separate bed-chamber, and even beat her; but he forbids a husband to seek a quarrel with his wife. If a wife commits adultery, the husband is allowed by custom to put her to death. According to a *fatwā* ('judicial decision') of Abdallah Efendi, a husband who takes his wife in adultery and kills both offenders is not liable to any punishment whatever; he even falls heir to the woman's possessions. Among the Turks, the husband may also drown an erring wife. Custom is more severe in this connexion than the *Qur'ān*; for Muhammad does not decree the death penalty for adultery, nor does he allow the injured husband to execute justice for himself. The husband, or any other person accusing a woman, must produce four witnesses; and the accuser who fails to do so is liable to receive eighty stripes (*Qur'ān*, iv. 19, xxiv. 2, 4). If the charge is proved by the agreement of the four witnesses, the offenders are both to be punished with a hundred stripes administered in the presence of a certain number of people; or the husband may imprison his wife for an unlimited period. Of course he may also divorce her. Cf. art. ADULTERY (Muslim).

A man wishing to divorce one of his wives for any reason must wait for four months, keeping the woman at his house but not cohabiting with her (*Qur'ān*, ii. 226); then he dismisses her, giving her a document called a 'certificate of divorce.' The woman retains her dowry. The divorced wife must wait three months before marrying again; if she has just had a child at the time of being divorced, the father may demand that she nurse the child for two years, and in such a case he must provide for the mother's maintenance during this period. A husband may take a divorced wife back again twice; but, if he divorce her a third time, he may not take her back unless she has been married to another man and divorced also by him.

A woman may not leave her husband at will; but she may seek divorce through the judge, and is granted it freely in various circumstances: *e.g.*, if the husband is prodigal or debauched, if he is not a good Muslim, or if he has not the means of supplying all household necessities. It is the husband's first duty to support the household; another and scarcely less important duty is to maintain his wife, children, and domestics in the practice of the Muslim religion. The husband, further, must rest content with the love of the wives and concubines he has in his house, and must never seek for objects of affection outside of it. He is bound also to give satisfaction to his legitimate wives; Muhammad says so expressly, and the commentary upon his words says that he must cohabit with them at least once a week.

Polygamy is a very costly luxury. The four legitimate wives cannot be forced to live together; each one has her house, or at least her apartment, table, and domestics. Economical reasons are a check upon polygamy, and it is only the rich who practise it. Men of moderate means and peasants have usually only one wife; there are even men who prefer not to marry at all, and are content with the commerce of their slaves, the latter being

regarded as legitimate wives once they have borne a son. This method of procedure is in agreement with the spirit of *Qur'ān*, iv. 3:

'If ye fear that ye cannot be equitable [*i.e.* that you will not be able to do your duty to the children], then marry only one wife or one slave.'

The Muslim woman's life appears to us a very pitiable condition. She takes no part in the society of men; she seldom goes out, and is always veiled when she does go. The wearing of the veil and a certain amount of seclusion are forced upon her by the *Qur'ān*. The custom of veiling is also found in ancient Greece; it existed likewise among various Arabian tribes before the time of Muhammad; it was meant to protect the dignity of free-born women, and scarcely applied to any others. It was only the women of high social rank that Muhammad had in view when he imposed the rule of covering the face with a veil; his words did not apply to slaves or women of low station. The precept, however, has been put in practice by all Muslims, and peasants and even nomads wear veils; the latter, it is true, do not have them so well fixed on as the town-ladies; they hang loose around the face, and are lowered only when passing a stranger. In Constantinople, after the revolution (A.D. 1909) which dethroned the Sultan Abdul Ḥamīd II., Muslim women began to go out unveiled; and the *shaikh al-islām* had to make a *fatwā* commanding them, on pain of imprisonment, to return to the observance of the law.

Women of high position go out very little; they pay visits to each other, and sometimes visit the shops, but rarely the mosque. Their chief amusement is going to the baths; but in the larger *ḥarīms* there are very elegantly built bathrooms, and so the women are deprived of this motive for going out. The Turkish lady passes her day on a sofa, smoking, singing, spinning, embroidering, or sleeping. Many of them have had keen intellects in their youth, and have received instruction and even learned a little foreign literature; but their intelligence is apt to become dull in their seclusion, and their occupations are of necessity childish. Their chief concern is to please their husband; and they become expert in the arts of dressing and voluptuousness. In the larger *ḥarīms* the musical and dancing slaves have to give festivals from time to time.

Neither the Turks nor the Arabs are a prolific race; and the multiplicity of wives does not increase the number of children. The secluded life must be unfavourable to fecundity, and the desire for luxury gets the better of that of producing children. Many young women, slighted by their lord, pass their youth in enforced sterility in the women's workshop; and the keeping of these, besides, entails the sacrifice of a certain amount of virile force, for it is necessary to make a great number of eunuchs to keep in the paths of chastity a multitude of pretty slaves who are tormented by their sensual appetites and the ennui of the *ḥarīm*.

Children are brought up, to the age of seven, by the women, in the father's house; they are swaddled for eight or ten months, and are usually nursed by the mother, who suckles them for twelve or fourteen months (the *Qur'ān* [xlvi. 14] says thirty months). If a nurse has to be requisitioned, she is treated with the greatest respect; she is called 'the foster mother,' and is generally a young slave who becomes free and is then regarded as a member of the family. The child is laid in a fine cradle and, in rich families, rocked by slaves. A fête is held to celebrate the day when it is put into short clothes or has its hair cut for the first time, and another when it begins to walk. At about seven years of age, boys are circumcised and pass out of the women's care. This ceremony, which they like to perform for a fairly large number of children at a time, is the occasion of great rejoicings. The boys after circumcision may be seen walking in the streets of Muslim towns, dressed in rich clothes, and wearing turbans embroidered in gold and silver and surmounted by plumes, and their families also give gifts to the poor at this time (see, further, CIRCUMCISION [Muhammadan], vol. iii. p. 677). Among the Arabs, this is also the occasion for giving the boys horses. Boys from the age of seven upwards go to school; they are taught reading, writing, arithmetic, and a little of the *Qur'ān*. In towns where there are Christian missionary schools the young Muslims sometimes attend them; even the little Muslim girls go to the schools managed by Christian nuns. Sometimes the richer parents employ governesses to come to their houses, and they may be Europeans. All the girls learn to sew and embroider; they do not take the veil until puberty. See, further, EDUCATION (Muslim).

Muslim children have the greatest respect for their father and mother. This veneration is enjoined in several verses of the *Qur'ān* (xlvi. 14–16, xvii. 24 f.). A Tatar boy never sits down in presence of his father; and a Turkish boy always comes for his father's blessing at the festivals and chief events in his life. In important Arab families the father is a veritable king. The chief of a rich family settles his sons when they reach the age of eighteen or twenty; he gives them houses of their own and finds them wives; this first marriage is arranged by the parents, whom the young man cannot but obey.

The *Qur'ān* lays down some regulations as to wills; but they are not quite clear. The disposable portion is not stated in figures. It is said that

'men should have a portion of what their parents and kindred leave, and women should have a portion of what their parents and kindred leave, whether it be little or much, a determined portion' (iv. 8);

but it is not stated what portion. A son has a right to twice the portion of a daughter. A husband gets one-half of what his wife leaves if there are no children, a quarter if there are children. A widow gets a quarter of her husband's possessions if there are no children, an eighth if there are children. Thus we see that testamentary legislation is ruled by the idea of the woman's inferiority—an idea which dominates the whole system of Muslim family life. See, further, LAW (Muhammadan).

LITERATURE.—It is impossible to select a bibliography on this subject. All books on Muslim religion and all accounts of travels in Muslim countries contain some reference to it. Besides the *Qur'ān* itself, it may be useful to consult d'Ohsson's *Tableau général de l'empire othoman*, Paris, 1787–1820, which gives an account of Turkish customs at the end of the 18th cent.—that is, at a time when the Turks had not yet been influenced by European thought; the general works or manuals recently published on Muhammadanism, *e.g.* by O. Houdas (*L'Islamisme*, Paris, 1904) or M. Hartmann (*Der islam. Orient*, Berlin, 1899 ff.), and the present writer's *La Doctrine de l'islam*, Paris, 1909. There are numerous interesting details regarding life in the Sultans' *ḥarīms* in J. A. Guer, *Mœurs et usages des Turcs*, Paris, 1746 (a very fine work); and a charming description of family life in the castle of an Arab nobleman is found in Emily Ruete's *Mémoires d'une princesse arabe*, Paris, 1905.

BON CARRA DE VAUX.

FAMILY (Persian).—Pride in an honoured lineage has always been as characteristic of the Iranians as of other peoples. Thus Darius I. traces his descent to Achæmenes (*Behist.* i. 4–6), and from the O. Pers. inscriptions we learn the Iranian term for 'family,' *taumā* (*ib.* i. 8, 28, 45, etc.), lit. 'seed.'[1] There are, however, only meagre data on the various degrees of relationship, except for those of husband and wife and of parent and

[1] The doubts of Tolman (*Anc. Pers. Lex.*, New York, 1908, p. 91) as to the connexion of O. Pers. *taumā* with Av. *taoxman*, 'seed,' seem exaggerated in view of the Bab. rendering of *taumā* by *zêru*, 'seed, family' (cf. Heb. זֶרַע, 'seed, offspring'; and the plural of Av. *taoxman*, in the sense of 'kindred,' in *Vend.* xii. 21).

child, and for this reason we must especially regret the loss of those portions of the Avesta *Hūspāram Nask* which treated of

'the guardianship of a family; likewise the varieties of it, and the fitness of a man for it. About one's own family, and whatever is on the same subject. About the income of wife and child. . . . About adoption; likewise the varieties of it, and fitness for it; the violation of adoption, the sin of the son who is accepted, and whatever is on the same subject. . . . About property that comes to next of kin through relationship, and that through adoption. . . . About where and in whom, after the father, is the prerogative as to a daughter being given away to a husband' (*Dīnk.* VIII. xxxvi. 7–17). Similar discussions—probably more elaborate—were contained in the lost *Sakāṭūm Nask* of the Avesta (*ib.* xliii. 10–20).

The closeness of bonds between relatives as determined by the godling Mithra, according to *Yašt* x. 116 f., has been quoted above (p. 208ᵇ), and in *Vend.* xii. the duration of mourning for various kinsfolk is given in a form which may be summarized as follows:

For a father (*pitar*) or mother (*mātar*) 30 days; for a son (*puthra*) or daughter (*dughdhar*) 30 days; for a brother (*brātar*) or sister (*xvanhar*) 30 days; for a husband (*nmānō-paiti*, 'house-master') or wife (*nmānō-pathnī*, 'house-mistress') 6 months; for a grandfather (*nyāka*) or grandmother (*nyākā*) 25 days; for a grandson (*napāt*) or granddaughter (*naptī*) 25 days; for a brother's son (*brātruya*) or brother's daughter (*brātruyā*) 20 days; for a father's brother (*tūirya*) or father's sister (*tūiryā*) 15 days; for a son of a father's brother (*tūiryō-puthra*) or daughter of a father's sister (*tūirya-dughdhar*) 10 days; for a son of a son of a father's brother or the daughter of a daughter of a father's sister (on these two terms, corrupted in the existing manuscripts, see Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, col. 748) 5 days. These periods are for those who have died in full religious fellowship; for those who die while under the ban the time of mourning must be doubled.

It should also be noted that each sex mourns for its own dead—'then when a father dies or a mother dies, how long do they mourn for them, the son for the father, the daughter for the mother?' (similarly the father for the son, the granddaughter for the grandmother). But brothers may mourn for sisters, and sisters for brothers; and nothing is directly specified regarding sex distinctions in mourning for nephews, nieces, uncles, aunts, and first or second cousins. Besides these relations, honour is shown to the *fravashis* (*q.v.*) of those next of kin (*nabānazdišta* [*Yasna* i. 18, iii. 22, iv. 24, vii. 22, xxii. 27, xxiii. 4, xxiv. 8, xxvi. 7, lxvi. 19, lxxii. 7 f.; *Yašt* xiii. 156; *Āfrīngān* ii. 2]).

The only terms for relatives in the Avesta besides those just quoted are for husband of one's daughter (*zāmātar*), and for father of one's husband (*xᵛasura*; both in *Yašt* x. 116), while for great-great-grandfather the O. Pers. (*Art. Sus. a*, 3) has *apanāyaka*. The dual *pitare* ('two fathers') denotes 'parents' (*Yašt* x. 116), and the plural *pterebyō* ('to the fathers') is employed in *Vend.* xv. 13 to denote the father and the oldest members of his family (cf. O. Icelandic *fethgar*, 'father and son(s),' *mœthgur*, 'mother and daughter(s)' [Delbrück, *Festgruss an Roth*, Stuttgart, 1893, pp. 15–17; Brugmann, *Vergl. Gramm. der indogerm. Sprachen*², Strassburg, 1897 ff., II. ii. 458, 447]).

Marriage was to the Iranians a sacred duty (see CELIBACY [Iranian]); a good marriage was a boon to be mentioned along with honourable lineage (*Visp.* ii. 7); good husbands, to whom the father gave away the bride[1] (*Yasna* li. 17; *Dīnk.* VIII. xx. 89, xxxvi. 17, xliii. 10 f.), were the gift of Haoma (*Yasna* ix. 23), and maidens also prayed for spouses to Ardvī Sūra Anāhita (*Yašt* v. 87), Vayu (*ib.* xv. 39–41), and Aši Vanuhi (*ib.* xvii. 10). Family discords were viewed with horror (*Yasna* lxv. 7), and a good wife was to be easy to guide, obedient to her spiritual head, and pious, while her husband should be fully acquainted with the faith, free from the *kayadha* sin (contempt of religion?), and diligent (*Visp.* iii. 4; *Gāh* iv. 9; cf. *Dīnk.* VIII. xxxi. 5 f.). Terrible punishment awaited the disobedient wife in the world to come (*Arṭā-Vīrāf Nāmak*, ed. and tr. Asa, Haug, and West, Bombay, 1872, xxvi., lxiii., lxx., lxxxii. f.).

The best of all marriages was the 'next-of-kin' (*xᵛaētvadatha* [*Visp.* iii. 3; *Gāh* iv. 8; *Yašt* xxiv. 17]), on which see MARRIAGE (Iranian); and the wife might be of any one of five classes.

A *pādšāh* ('ruling *or* privileged') wife is an unbetrothed maiden, wedded with her parents' consent, her children all belonging to her husband. A *yūkan* or *ayūk* ('only child') wife is similar, except that her first child belongs to her parents, who give her in return one-third of their property. A *satar* ('adopted') wife is one dowered by the relatives of a man dying childless and unmarried; half her children belong to her living husband, and half to the dead one, who also has her in the other world. A *čākar* ('serving') wife is a re-married widow, if she has no children by her first husband, who in any case has her in the future world; she is also a *satar* wife. A *xūd-sarāī* ('self-disposing') wife is one marrying without the consent of her parents, from whom she inherits no property until her eldest son gives her to his father as a *pādšāh* wife (Pers. *rivāyats* summarized by West, *SBE* v. 142, note 10; cf. also *Dīnk.* v. 17, tr. Sanjana, p. 637; Anquetil du Perron, ii. 560 f.).

Polygamy was common, at least among the rich, among the Persians (Herod. i. 135; Strabo, p. 733; Ammian. Marcel. xxiii. 76; Agathias, ii. 30) and Medians (Strabo, p. 526); and it also appears to have flourished among the Zoroastrian Iranians. As Geiger points out (*Ostīrān. Kultur*, pp. 244, 247), there are Avesta passages, such as *Vend.* iii. 3 (in the house of the righteous, women and children are present in rich abundance—*frapithwō nāirika frapithwō aperenāyūkō*), which imply this, while in *Yasna* xxxviii. 1 there is plainly a reference to the 'women' (doubtless the wives) of Ahura Mazda himself (*yāscā tōi genā ahurā mazdā*), and Zoroaster is represented by tradition as having three wives, two of whom were 'privileged' and the third a 'serving' wife (*Bundahišn*, xxxii. 5–7; cf. also Jackson, *Zoroaster*, New York, 1899, p. 20 f.). In the later period, when the *Māṭigān-i-Hazār Dāṭistān* was written, polygamy was expressly recognized (West, *GIrP* ii. 117), but in India it was permitted only when the first wife was barren, and then only if she gave consent (Anquetil du Perron, ii. 561).

In regard to concubinage, it would seem that there was a sharp distinction between Zoroastrian and non-Zoroastrian Iranians. The Avesta contains no allusion to the concubine, and the chief references in Pahlavi literature seem to be *Šāyast lā-Šāyast* x. 21, xii. 14, the latter passage reading:

'It is well if any one of those who have their handmaid (*čakar*) in cohabitation (*zanih*), and offspring is born of her, shall accept all those who are male as sons; but those who are female are no advantage, because an adopted son is requisite, . . . and there are many who do not appoint an adopted son with this idea, that: "The child of a handmaid may be accepted by us as a son."'

Among the non-Zoroastrians, on the contrary, concubinage was very common, at least among the wealthier classes (*ERE* iii. 812 f.). There was in the Sasanian period, as there is to-day, a strong disapproval of marriage outside the Zoroastrian community (*Dīnk.* iii. 80, tr. Sanjana, pp. 90–102; the particular case under consideration is the marriage of a Zoroastrian to a Jewess), the reasons being largely those of lack of racial and religious sympathy. On the other hand, the marriage of princesses from foreign lands was very frequent throughout Persian history, even in the Sasanian period (Spiegel, *Erân. Alterthumskunde*, iii. 679 f.). When Zoroastrianism was still a proselytizing religion, a non-Zoroastrian might be wedded after having embraced the Zoroastrian faith; but the modern Parsis have not merely abandoned proselytizing, but object strenuously to receiving converts, so that the problem of intermarriage has become more difficult than it was centuries ago.

The dowry of a widow who marries a second time is less than that of a virgin bride (*Dīnk.* v. 17, tr. Sanjana, p. 637), and, as already noted, half of her children by her second husband really belong to her first husband, as does she herself in the future world.

There was, besides the forms of marriage already mentioned, a quasi-levirate. According to al-Bīrūnī (*India*, tr. Sachau, London, 1888, i. 109 f.), quoting Tansar,

'if a man dies without leaving male offspring, people are to examine the case. If he leaves a wife, they marry her to his nearest relative. If he does not leave a wife, they marry his daughter or the nearest related woman to the nearest related

[1] Apparently an orphan girl without uncles on either side was unmarriageable (*Dīnk.* VIII. xliii. 11).

male of the family. If there is no woman of his family left, they woo, by means of the money of the deceased, a woman for his family, and marry her to some male relative. The child of such a marriage is considered as the offspring of the deceased. Whoever neglects this duty and does not fulfil it, kills innumerable souls, since he cuts off the progeny and the name of the deceased to all eternity.'

The desire of the Iranians for children and their provision for their education have been considered elsewhere (*ERE* iii. 544, v. 207 f.). As supplementary to CHILDREN (Iranian), it may be noted that not only were children a blessing (*Vend.* iv. 47; *Šāyast lā-Šāyast*, x. 22, xii. 15; *Dāṭistān-ī Dīnīk*, xxxvii. 43; *Dīnk.* v. 19 [tr. Sanjana, p. 639], VIII. xx. 139) and childlessness a curse (*Yašt* xvii. 57), but special respect was paid to mothers of heroic sons (*Yasna* i. 6, etc.; *Visp.* i. 5; *Gāh* iv. 2; *Sīrōz* i. 7, ii. 7; *Yašt* ii. 5, 10), and the birth of some of the legendary heroes of Iran was a direct reward for the religious devotion of their fathers (*Yasna* ix. 4 [Yima], 7 [Thraētaona], 10 [Urvāxšaya and Keresāspa], 13 [Zarathuštra]).

The principle of filial obedience was implanted by Ahura Mazda himself (*Yasna* xliv. 7), and the *Dīnkarṭ* declares (IX. lv. 5) that

'whoever teaches to a son reverence unto his father has also appropriated the reward for reverence unto the creator for teaching that person; even for this reason, because express reverence unto parents and service to them are connected with reverence unto the Creator and service to him.'

Even after the death of one's parents and other relatives, one is to celebrate the sacred feast (*myazd*), the consecration of the sacred cakes (*drōn*), and the benedictions (*āfrīngān*) for the souls of the dead, who will then avert misfortunes from the living (*Sad Dar*, xiii.; cf. vi. 2, xlv. 9). Naturally, the father had certain duties toward his child (*Dīnk.* VIII. xxxi. 21, xxxiv. 4 f.); but, if the proper filial obedience was not shown, those who 'in the world distressed their father and mother, and asked no absolution and forgiveness from their father and mother in the world,' had, in hell, 'their chests plunged in mud and stench, and a sharp sickle ever went among their legs and other limbs, and they ever called for a father and mother' (*Arṭā-Vīrāf Nāmak*, lxv.).

In the Pahlavi *Dāṭistān-ī Dīnīk*, elaborate rules are given for inheritance, adoption, and guardianship.

The regulations for inheritance are as follows (lxii. 3 f., 6): 'When there is nothing otherwise in the will and private, property goes to a wife or daughter who is privileged; if one gives her anything by will, then she does not obtain the share pertaining to her. Whenever a share for a son is not provided by it, every one has so much, and the wife who may be a privileged one has twice as much; and the share of that one of the sons, or even the wife of a son, who is blind in both eyes, or crippled in both feet, or maimed in both his hands, is twice as much as that of one who is sound. . . . If there be no son of that man, but there be a daughter or wife of his, and if some of the affairs of the man are such as render a woman not suitable for the guardianship, it is necessary to appoint a family guardian; if there be, moreover, no wife or daughter of his, it is necessary to appoint an adopted son.' The adopted-sonship and guardianship referred to in these sections are thus defined in the same treatise (lvi. 2–4): 'It is requisite, whenever a man of the good religion is passing away, while he is a complete ruler of a numerous household, who has no wife and child that may be privileged and acknowledged, nor associating brother, nor son by adoption, and his property is sixty stīrs [about 84 rupees] of income. The controlling of the property is to be publicly provided out of the kindred of the deceased, and is called the adopted-sonship; and he is to be appointed to it who is the nearest of the same lineage, who will manage and keep the property united in its entirety. The guardianship of a family is that when a guardian has to be appointed in that manner over the family of a man whose wife, or daughter, or infant son is not fit for their own guardianship, so it is necessary to appoint some one.' Those who are suitable for such adoption are 'a grown-up man of the good religion who is intelligent, a complete ruler of a numerous household, expecting offspring, and not having sins worthy of death,' such a man being eligible 'even when he has accepted either one adoption, or many adoptions.' 'And a grown-up woman, or even a child, is suitable for one adoption, but when adopted in one family she is not suitable for another adoption. A woman requiring a husband—though a complete worshipper—or a foreigner, or an infidel, or one having sins worthy of death, is unfit for adoption; so also those who are demon-worshippers, she who is a concubine (*šūsar nēšman*) or courtezan, and she who is menstruous are unfit' (*ib.* lvii. 2–4; cf. also lvi. 6 f.). Maladministration of the adopted-sonship is a deadly sin (*ib.* lx.). This adoption is of three kinds—existent, provided, and appointed. 'An adopted son who is existent is such as a wife who may be privileged, or an only daughter is a kind of adopted son owing to confidence in herself, such as happens when there is no wife, and a daughter for whom there is no husband. . . . An adopted son who is provided is such as a son that is acknowledged, who is accepted by oneself, and free from being appointed, or from necessity. And an adopted son who is appointed is he who is to be appointed among the relations who are suitable for adoption—and are nearest to him who is to be appointed as adopted son—and the ministers of religion, and he performs the duty of family guardianship; he who is the appointed one is he who is appointed by the men who are the nearest relations on account of proximity' (*ib.* lviii. 3–5).

From this fictitious adoption we must distinguish the real adoption of a son, to be appointed, in the case of a man dying with neither an own nor an adopted son, by the priests and the relations of the deceased, in order that the soul of the dead man might escape the tortures of hell, especially as 'every duty and good work that he [the adopted son] performs shall be just like that which is performed by one's own hand . . . every time that they appoint an adopted son for any one, it is just as though they have made the deceased alive' (*Sad Dar*, xviii. 12, 19).

LOUIS H. GRAY.

FAMILY (Roman).—With characteristic fondness for legal distinction and analysis, the Romans distinguished four relationships in which each individual found himself: (1) the relationship to himself as an individual; (2) that to his family; (3) that to the group of families which formed his clan (*gens*); (4) that to the union of clans (*gentes*) which composed the State. The most elementary of these four relationships, and the one upon which the others were based, was not, as we would suppose, judging by our own day, the individual, but rather the family. The growth of the concept of individuality on Roman soil was retarded by the excessive degree to which the social idea was developed. The individual existed merely for the sake of the family and its derivatives, the clan and the State. At death he passed over into the 'majority,' and lost whatever little of individuality he had gained in life, by being absorbed into the mass of departed spirits; he was mortal and the family was immortal. On the other hand, the family had created the clan, and the clan the State, with the result that the clan soon fell into insignificance and lost its life on behalf of the creature of its own making, the State. Finally, in its turn the State, at least in the earlier phases of its history, was nothing but the magnified reflexion of family life, with its king as the father of the people, etc. From this brief sketch it will be seen that the family occupied a unique place in the make-up of early Roman society. Centuries were destined to pass before individualism attempted to make good any claims of the individual over against the dominating superiority of the family; and, on the other hand, the decline of the clan-idea left the State as the only rival of the family—a rivalry which was chiefly theoretical rather than real.

It was a basic principle of Roman religion that human life was everywhere surrounded by the gods; for what the faith of the Romans lacked in spiritual intensity was, in part at least, compensated

by its extensiveness, and the very superficiality of their belief brought it into contact with the whole surface of their life. Thus the gods were interested in the fulfilment of the duties which attached to each of these four above-mentioned relationships. The divine duties of a man as a citizen of the State formed a part of the 'public worship,' or *sacra publica*; the divine duties connected with the other three relationships were included under the term 'private worship,' or *sacra privata*. Of these three relationships, that of a man towards his clan or *gens* sank so soon into insignificance that our knowledge of the *sacra gentilicia* is extremely scanty, and the subject need not trouble us here. The divine duties of the family form the theme of this article, but the individual was so involved with the family that we cannot eliminate him from our discussion. As a matter of fact, those elements which later assumed the characteristics of individualism were in their original state merely phases of family worship, expressing the relations of each individual to the family.

Our sources for a knowledge of the history of the family and of family worship in Rome are relatively scarce when compared with our sources for the history of the State and of the State religion. Official documents, calendars, etc., which are so valuable for the history of the State religion, are of almost no value here. Inscriptions, indeed, are exceedingly numerous, but they are almost all sepulchral, and are therefore valuable only for our study of the cult of the dead. The very homeliness and familiarity of the subject from the standpoint of contemporaries is the cause of our ignorance; very few people take the trouble to speak about what everybody knows; hence our sources are largely incidental, *e.g.* among the poets, especially Plautus, Horace (*Satires*), Tibullus, besides a few late antiquarian writers, and the scholiasts and commentators on the poets. We might well despair of ever obtaining an adequate picture, were it not for one psychological fact, namely, that, though all religion tends to conservatism, there is no part of it which is more conservative and less subject to change than the religion of the family. Hence, though our sources are fragmentary and widely separated chronologically, they can be placed side by side to form a mosaic picture.

The deities worshipped by the family may be divided for convenience of treatment into two classes: those regularly connected with the family, and those who were occasionally interested in family life. We shall deal first with those regularly connected with the family, second with those occasionally interested in family life, and we shall then add as a third section a brief discussion of the relationship of family worship to Christianity.

1. Deities regularly connected with the family.—The deities regularly connected with the family were either not included in the State cult at all, or, if included, were worshipped there as an imitation of the cult of the family, a symbolic representation of the State as merely an enlarged family. Chief among these deities are the Genius (and the Juno), the Lar, the goddess Vesta, and two groups of deities, the Di Manes and the Di Penates.

(1) The most important element in the worship of the family and the supreme duty of the individual was the worship of the deified ancestors, or *Di Manes* (literally, 'good gods'). At death each individual was conceived of as losing his individuality and becoming immortal merely as a part of the great mass of the Di Manes. The prime duty of the head of the family was the regular and scrupulous fulfilment of the ancestral sacrifices; and it was also his paramount duty to provide a successor in the person of a real or an adopted son who could take up the burden of the sacrifices after he had laid it down at death. For further particulars, see art. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Roman).

(2) Quite distinct from this worship of the deified dead *en masse* was the cult of the protecting deity of the living, the guardian of each individual. This guardian was called in the case of a man the *Genius*, in the case of a woman the *Juno*. The connexion of the individual with the family is shown very clearly in the original meaning of the Genius and the Juno, for at first they were thought of in a purely materialistic way, as the physical force employed in the maintenance of the family, the Genius (cf. *gignere*, and Censorinus, iii. 1) as the procreative power, and the Juno as the conceptive power. By degrees these ideas became more and more spiritual, until during the empire the Genius and the Juno stood for a sort of guardian angel. The Genius (we use the word here and onwards to express both Genius and Juno) was thought of as co-existent with the individual, born with him, passing through life with him, and finally dying with him. Hence the birthday of the individual was the chief festival of his Genius. On this day he was worshipped as the 'Genius natalis' or simply as 'Natalis' (cf. Tibullus, ii. 2, iv. 5; Censorinus, ii. 1; similarly 'Juno natalis,' Tibullus, iv. 6. 1); and sacrifice of wine and milk and cake was made to him. The most important of these birthday celebrations was naturally that of the master of the house, the *paterfamilias*. Slaves and freedmen often erected dedicatory inscriptions in honour of this event (cf. *CIL* vi. 257–259, ii. 1980, v. 1868, x. 860, 861, ii. 356; and, for the Juno, ii. 1324). From the time of Augustus the cult of the Genius received an additional emphasis from the fact that the Genius of the living Emperor was an object of worship at first for the State at large, and afterwards for each family. The use of the Genius as a protecting deity of corporations, cities, buildings, etc., lies outside of our present discussion.

(3) But the religion of the family did not content itself with the cult of the deified dead and the worship of the Genius of the living; it paid homage, in addition, to the deities who protected those material things with which the family had to do—the house itself, the store-closet, and the hearth—viz. the Lar Familiaris, the Di Penates, and Vesta.

(*a*) The origin of the *Lar Familiaris*, or protecting deity of the house, is one of the most disputed points in the field of Roman religion; but the most likely view is that the cult of the household Lar (in the singular) is merely a branch of the general cult of the Lares (in the plural) at the cross-roads, the so-called 'Lares Compitales' (for a different view, cf. Samter, *Familienfeste der Gr. und Röm.*, Berlin, 1901; cf. also *ERE* iv. 336[b]). The Lar Familiaris was thus the protector of the house and its inhabitants, especially the slaves (the *familia* in the technical sense). The venerable farm-almanac of Cato directs that the bailiff's wife, the *villica*, should place a wreath on the hearth on the Kalends, Ides, and Nones, and should on those same days pray to the Lar Familiaris for plenty (*de Agric.* 143). The Lar Familiaris formed the sentimental centre for all phases of family life, and offerings of wreaths, incense, and wine were made to him on all family anniversaries. Thus the Lar represented the primitive concept of home, and was the ideal figure about which the associations of the household clung. Before undertaking a journey, the Roman offered up a sacrifice to the Lar (cf. Plautus, *Merc.* 843 ff.), and also on the occasion of a safe return home. When a member of the family, who had been lost, was found (cf. Plautus, *Rud.* 1206 ff.; and *CIL* ix. 925), or when one of the family recovered from an illness, a

wreath was put on the Lar; and, when a member of the household died, the ceremony of purification which followed included the sacrifice of sheep to the Lar (Cic. *de Leg.* ii. 55). When a son put on the *toga virilis*, the Lar Familiaris was crowned, and the amulet, the *bulla*, which the boy had worn up to that time, was hung about the neck of the Lar (cf. Pers. v. 31; Petron. 60; Prop. iv. 1, 131 ff.). When the bride entered the house of her husband, she placed one copper coin on the hearth as an offering to the Lar Familiaris, gave a second to her husband, and placed a third on the altar at the nearest cross-roads in honour of the Lares Compitales (Varro, *in Non.* p. 531). Finally, various votive offerings were hung on the wall near the hearth in honour of the Lar, *e.g.* the weapons of the veteran soldier (cf. Ovid, *Trist.* iv. 8. 22; Prop. iii. 30. 21 ff.; Hor. *Sat.* i. 5. 65 ff.).

(*b*) One of the most important rooms in the old Roman house was the *cella penaria*, or store-closet, corresponding to the room which in modern Italian houses is called the *dispensa*, containing the reserve supplies of food products, and to be carefully distinguished from the pantry, where the day's supply of food was kept after it had been taken out of the store-closet. It is characteristic at once of the simplicity and the practical nature of early Roman religion that a group of gods who were supposed to be in charge of this store-room, and who received their names from it, formed one of the most important elements in the cult of the family. These gods were known as the *Di Penates* (*penus*='store-closet'), where Penates is not a proper name like *Lar, Lares*, but merely an adjective in agreement with *Di*; hence it was frequently a theme of discussion among the antiquarians of Rome as to who the Di Penates were, and whether any particular deity, *e.g.* Vesta, belonged to them or not. The real state of affairs seems to have been as follows. The Di Penates originally were a group of otherwise nameless gods, and Vesta was not included in their number, though she was very closely associated with them, since the hearth, Vesta's altar, was the place where sacrifice was made to them also. When Vesta was worshipped by the State in the forum, this relationship was recognized, and the Penates of the State, the 'Di Penates P.R.Q.,' were worshipped at the same altar. Later the Penates received their own State temple, and were thus in public worship separated from Vesta, so that both they and Vesta preserved their independence. In private worship the reverse process took place, and the original association of Vesta and the Penates was never broken, but, instead, Vesta gradually lost her independent position, and was included under the title of the Penates. This explains the apparent neglect of Vesta in private worship. But, apart from Vesta, there was a constant tendency to abandon the group of nameless deities, and to include certain well-known gods among the Di Penates. The choice in such cases was governed by the particular circumstances and interests of the individual; hence we have many varying combinations, as may be seen in the frescoes on the kitchen walls of many of the houses of Pompeii (cf. Helbig, *Wandgemälde der von Vesuv verschütteten Städte Campaniens*, Leipzig, 1869, p. 19 ff.; de Marchi, *Il Culto privato*, 1896, i. 79 ff.).

2. Deities occasionally interested in the family.—Apart from those deities whom we have already mentioned, and who were constantly protecting the individual himself and his permanent surroundings, his house, his hearth, his store-closet, etc., many others of the gods of Rome were occasionally concerned in family life, so that it is literally true that human life was hedged about by them from the cradle to the grave. Practically every one of the gods of the State came into contact with the family at some time during the life of the individual, and we shall speak here only of the more important of these temporary associations.

(1) The famous sentence of Tertullian (*de Anima*, 39), 'Ita omnes idololatria obstetrice nascuntur,' was from his standpoint a fair enough expression of the part which a host of minor deities was thought to take in the conception and *birth* of each human being. The exact names of these deities, however, and the part which each took, are by no means certain (for further details, cf. the article 'Indigitamenta,' by Peter, in Roscher's *Lexikon*; and de Marchi, *Il Culto privato*, i. 165, note 3); but the chief of these deities was Juno, who, under the cult name of Lucina, was invoked as the goddess of childbirth (cf. *ERE* ii. 649). Another long list of deities cared for the child in his cradle, taught him to walk, protected him from the evil eye, and developed him to young manhood (for these deities, who also are uncertain, cf. Peter, i. 1, and de Marchi, i. 168 f. and notes). Certainty attaches, however, to the celebration of the *dies lustricus* (the ninth day after birth in the case of a boy, and the eighth day in the case of a girl [cf. Marquardt, *Privatleben der Römer*, Leipzig, 1888, p. 83]), when the child was given a name, to the accompaniment of a sacrifice, and probably a banquet. One of the greatest proofs of the essential difference between Roman religion and Christianity, and of the absolute foreignness of Roman religion to our habits of thought, is found in the matter of the training of the child. We miss any act resembling in meaning either baptism or confirmation; religion and the State are so identical that the child as a citizen necessarily partakes of the religious life of the State without any formal act of inclusion. Further, since religion consists so entirely in ritual acts and is so barren of theology, no formal religious instruction is necessary, but the child grows up learning by imitation when and how the ritualistic acts should be performed. The myths he learns partly from his nurse, partly in the schools, but principally by being surrounded by them in wall-decoration, literature, etc. The transition from boyhood to manhood was marked by the putting on of the *toga virilis*, and the offering of a sacrifice. The youth, accompanied by his family, ascended the Capitol, sacrificed to Juppiter, and put a coin into the money-box of the goddess Juventas. The usual day for the performance of this rite was the Liberalia (March 17), the festival of Liber.

(2) From the standpoint of the preservation of the family, the most important act in the life of the individual is *marriage*; hence it is not surprising that it, too, was under the protection of the gods. But, while we see traces of religious observances surrounding all forms of Roman marriage, it is difficult to state exactly in what these ceremonies consisted. Of the three forms of marriage in Rome—*confarreatio*, *usus*, and *coemptio*—only the first was attended by any special religious act, while the last two were affected by religion only as much as were all the acts of life. Common to both *confarreatio* and *coemptio* was the avoidance, on religious grounds, of certain days for marriage. (*Usus*, being merely the legalization of cohabitation at the end of a year, did not permit of the choice of a special day.) The days thus avoided were: the Parentalia, or the feast of the dead, Feb. 13–21; the month of March, because of the festivals of the Salii and of Mars; the month of May, because of the Lemuria—May 9, 11, 13—and because of the procession of the Argei on the 15th; June 7–15, because the temple of Vesta was being cleaned; the three days in the year when the lower world was thought to be open (*mundus patet*)—Aug. 24, Oct. 5, Nov. 8; in general the

dies postridiani, i.e. the days following the Kalends, the Nones, and the Ides; the *dies atri*, or days unlucky because of some great disaster (*e.g.* July 18, the day of the battle of the Allia). In addition to all these days, the day immediately preceding each of them was generally avoided, so that, even if the day of marriage itself was lucky, the first full day of married life might not be unlucky; and, finally, all holidays were avoided, so that there might be no rival attraction to interfere with attendance at the wedding. Further, in connexion with both forms of marriage the auspices were consulted, in early times by the genuine *auspicia*, the observation of the flight of birds, later by the more convenient form of the consultation of the entrails (*haruspicina*). The predominatingly religious form of marriage was, however, the *confarreatio*, which as early as the end of the Republic was more or less of an old-fashioned curiosity. It was undoubtedly originally the only form of marriage for patricians. The marriage took place in the presence of ten witnesses, and the Pontifex Maximus and the Flamen Dialis, or priest of Juppiter. Its chief act, from which it derived its name, was the offering of a cake (*panis farreus*) to Juppiter.

(3) We have seen the gods active at birth and at marriage: and we might expect their presence at the death-bed, but such is not the case. The individual has done his work so far as the family is concerned, he has contributed his share; let him pass now into the mass of nameless Di Manes. He can have no comfort at death, for there is no individual future for him; his only satisfaction is the contemplation of what he has done for the family, and the prospect that the ancestral sacrifices, for which he has provided, will now benefit him along with the rest of the Manes.

3. Family religion and Christianity.—In the minds of a people who loved the customs of their ancestors (*mos majorum*) as much as the Romans did, the simple rites of the family, descending from an indefinite past, had a far greater sanctity than the more gorgeous, but more modern, ceremonies of the official State religion. The preachers of Christianity, therefore, found the pagan far more ready to give up Juppiter and Mars than the Genius and the Lar. On the other hand, the rites of family worship were so often connected with some perfectly innocent family event that the spiritual directors of the Christians thought it improper altogether to forbid the participation of Christians in the family festivals of their pagan friends. Tertullian, who wrote about A.D. 200, has an interesting passage on this (*de Idololatria*, 16), in which he authorizes attendance at the festivals connected with the putting on of the *toga virilis*, betrothals, marriages, and the naming of children, even though sacrifices were connected with them. This reverence on the part of the pagans, and this indulgence on the part of the Christians, caused the *sacra privata* to decline much more slowly than the *sacra publica*. Almost three generations after Constantine had given Christianity an official right of existence, it was necessary for Theodosius (A.D. 392) to issue the famous edict (*Cod. Theodos.* xvi. 10. 2): 'nullus omnino secretiore piaculo Larem igne, mero Genium, Penates odore veneratus accendat lumina, imponat tura, serta suspendat.' But, in spite of this edict, some of the rites of family-worship seem to have existed in the country places for centuries longer.

JESSE BENEDICT CARTER.

FAMILY (Teutonic and Balto-Slavic).—When the Aryan peoples, including, of course, the progenitors of the Teutons and Balto-Slavs, spread over Europe in pre-historic times, they found, among many of the aboriginal tribes of our continent, certain forms of family life quite different from their own. Of these the most notable was the so-called matriarchy, *i.e.* that family organization—still surviving, as ethnologists tell us, in certain parts of the world—which, while it recognizes a marital relationship of longer or shorter duration, does not recognize the paternal relationship, as the children belong, not to the father, but to the mother, and inherit property, not from the father or paternal uncle, but from the mother, and especially the maternal uncle or grand-uncle. In connexion with the matriarchal family we frequently find, on the one hand, that women are held in high honour and even possess supreme power, and, on the other, that sexual life is marked by an astounding laxity; we hear also of polyandry, of the marriage of blood-relations, and even of complete sexual promiscuity.

A signal contrast to such conditions of family life is presented by what we know of the Aryan or Indo-Germanic stock, in which the existence of the so-called patriarchal or agnatic family is attested by the fact that the words expressive of family relationships are essentially the same in the various cognate languages.

Thus, for example, Goth. *fadar* corresponds to Lat. *pater*, Gr. πατήρ, Skr. *pitdr*; O.H.G. *muoter*, O. Slav. *mati*, to Lat. *mater*, Gr. μήτηρ, Skr. *mātdr*; Goth. *sunus*, Lith. *sunùs*, O. Slav. *synŭ*, to Skr. *sūnú*; Goth. *daúhtar*, Lith. *duktė́*, O. Slav. *dŭšti*, to Gr. θυγάτηρ, Skr. *duhitdr*; Goth. *brôþar*, O. Pruss. *brote*, O. Slav. *bratrŭ*, to Lat. *frater*, Skr. *bhrātar*; Goth. *svistar*, Lith. *sesũ*, O. Slav. *sestra*, to Lat. *soror*, Skr. *svdsar*; O.H.G. *fatureo*, 'uncle,' to Lat. *patruus*, Gr. πάτρως, Skr. *pitṛvya*; Goth. *avo*, 'grandmother,' to Lat. *avus*; A.S. *nefa*, 'grandchild,' Lith. *nepotis*, to Lat. *nepos*, Skr. *nápāt*; O.H.G. *snura*, 'daughter-in-law,' O. Slav. *snŭcha*, to Lat. *nurus*, Gr. νυός, Skr. *snuṣā*; O.H.G. *suehur*, 'father-in-law,' Lith. *szeszùras*, O. Slav. *svekrŭ*, to Lat. *socer*, Gr. ἑκυρός, Skr. *śvdśura*; Goth. *svaihrô*, 'mother-in-law,' O. Slav. *svekry*, to Lat. *socrus*, Skr. *śvaśrū*; O.H.G. *zeihhur*, 'husband's brother,' Lith. *dewerìs*, O. Slav. *deverĭ*, to Lat. *levir*, Gr. δαήρ, Skr. *dēvdr*; O. Slav. *zlŭva*, 'husband's sister,' to Lat. *glôs*, Gr. γάλως; O. Slav. *jetry*, 'husband's brother's wife,' Lith. *inte*, to Lat. *janitrices*, Gr. εἰνάτερες, Skr. *yātaras*, etc.

These examples of the terms applied to family relationships show incontrovertibly that the foundations of the modern family were already laid in primitive Aryan times, and it is the object of the present article to treat of this institution in fuller detail, more especially as found among the Teutons and Balto-Slavs. We do not propose to deal separately with these two ethnological groups, as it will be seen that in many cases the bearings of the subject in one group become fully intelligible only by reference to the other. The subject-matter will be arranged under the three headings of (1) marriage, (2) husband and wife, and (3) the other inmates of the household.

1. Marriage.—From the earliest times we find in either group two forms of marriage, viz. marriage by purchase and marriage by capture. As regards the ancient Lithuanians, we have the following item of information in *Michalonis Lituani de moribus Tartarorum Lituanorum et Moschorum fragmina*, ed. Grasser (Basel, 1615), p. 28: 'Quemadmodum et in nostra olim gente solvebatur parentibus pro sponsis pretium, quod krieno ('purchase-money': Skr. *krīṇāmi*, 'I buy') a Samagitis vocatur.' Of the ancient Prussians, Peter of Duisburg (in *Script. rer. Pruss.*, Leipzig, 1861, i. 54) writes: 'Secundum antiquam consuetudinem hoc

habent Prutheni adhuc in usu, quod uxores suas emunt pro certa summa pecuniae.' With reference to the ancient Slavs, see below. In Old Russian a marriageable girl was called a *kunka*, from *kuna*, 'marten,' because her parents might exchange her for marten-skins, the usual medium of payment in ancient Russia, just as Homer speaks of a maiden as ἀλφεσίβοια, 'cattle-winning,' signifying that she brought her parents a bride-price in the form of cattle. To this day among the Russian peasantry, the first act of the nuptials is the suit or proposal (*svátanie*), which is a purely commercial transaction. The father of the suitor, usually accompanied by a relative, visits the girl's parents and says, 'We have a purchaser; you a commodity: will you sell your ware?' Then follows the bargaining, which, as our informants state, differs in no respect from a negotiation about the sale of a cow.

The well-known reference of Tacitus to the marriage customs of the ancient Germans (*Germ.* 18: 'Dotem non uxor marito, sed uxori maritus offert. Intersunt parentes et propinqui ac munera probant [*i.e.* marriage was an affair of the whole family-group], non ad delicias muliebres quaesita nec quibus nova nupta comatur, sed boves [cf. ἀλφεσίβοια] et frenatum equum et scutum cum framea gladioque. In haec munera uxor accipitur') can hardly refer to anything else than a commercial transaction of similar character. For the fact that marriage by purchase continued to prevail among the Teutons till a much later period is shown by numerous passages in the vernacular records.

Cf. *e.g.* 'êr thea magath habda giboht im te brudiu' (O. Sax.), and 'Cyning sceal mit ceápe cwêne gebicgan, bûnum and beágum' (A.S.). The Teutonic term for the bride-price appears in O.H.G. *widumo* and A.S. *weotuma*, words which in course of time to some extent changed their meaning (cf. N.H.G. *wittum*, 'widow's estate'), but which, alike in form and signification, were originally equivalent to the Homeric ἔεδνον (= Fέδνον), 'gift to the bride's parents.' If we assign to this word a root with a double termination (**ved, vedh*), we can trace the A.S. *weotuma* and Gr. ἔεδνον to the oldest term for marriage in the Aryan tongues: Lith. *wedù*, O. Russ. *voditi*, lit. 'to lead' (*vodimaja*, 'wife'), Skr. *vadhû*, 'young wife,' Avest. *vadhû*, 'woman,' *vadhrya*, 'marriageable'; so that A.S. *weotuma* and Gr. ἔεδνον mean literally 'the price for taking home the bride.'

Side by side with marriage by purchase is found marriage by capture. The co-existence of the two forms is seen most clearly in eastern Europe. Thus, according to the Chronicle of Nestor (ed. Miklosich, Vienna, 1860), cap. x.,

'they [the ancient Slavs] had their customs and the law of their fathers and their traditions; each tribe had its own usages. The Poljans (*i.e.* the Poles in the neighbourhood of Kiev) had the quiet and gentle manners of their fathers, were modest before their daughters-in-law and their sisters, their mothers and parents, and showed great respect for their mothers-in-law and brothers-in-law. They had a marriage (*bračny*) system. . . . But the Drevljans ('forest-folk') lived in brutish fashion; they lived like wild beasts; they killed one another, ate unclean things, and had no marriage (*brakŭ*), but abducted (*umykachu uvody*) the young women. And the Radimičes ('sons of Radim,' on the Soz), the Viatičes ('sons of Viatko,' on the Oka), and the Severes (people of the North), had all identical customs: they lived in the woods like wild beasts, and ate all manner of unclean things; they carried on lewd conversations before their parents and daughters-in-law. They had no marriages (*brakŭ*), but had places for play between the villages, and assembled at these games, dances, and all kinds of devilish sportings, and then each one carried off the woman with whom he had come to terms. Each of them, moreover, had two or three wives.'

Among the Baltic tribes likewise—the Lithuani, Livonienses, and Curetes—as also among the Muscovitæ and Rutheni, as we learn from the *Historia de gentibus septentrionalibus* (Rome, 1555) of Archbishop Olaus Magnus, marriage by capture was quite common. Of the Lithuanians in particular, Lasicius (*de Diis Samagitarum*, cap. 56) writes as follows: 'Nec ducuntur (puellae), sed rapiuntur in matrimonium, veteri Lacedaemoniorum more a Lycurgo instituto. Rapiuntur autem non ab ipso sponso, sed a duobus ejus cognatis.' Cf. also M. Prætorius, *Deliciæ Prussicæ*, ed. W. Pierson (Berlin, 1871), p. 69:

'Erasmus Franciscus, in his *Mirror of Ethics*, lib. 3, c. 3, p. 958, speaks thus of the Prussians: "In many localities their marriageable daughters wore little bells or cymbals, which were fastened to the girdle by a ribbon and hung down to the knees, so as to give a sign to suitors that the fruit was ripe. Nevertheless, they did not offer themselves directly, but allowed themselves to be seized and dragged into the married state. They were carried off, however, not by the bridegroom himself, but by his two nearest friends."'

Among the Russian peasantry the two forms of marriage referred to, viz. marriage in the recognized sense (*brakŭ*)—which, as we saw, was simply marriage by purchase—and 'predatory marriage' (*voróvskaja svádiba*), marriage by capture (*umykánie*), or whatever else it may be called, still exist side by side, though the latter has receded farther and farther into the wooded country to the east of the Volga. For a fuller discussion of predatory marriage in Russia, see Schrader, *Sprachvergl. u. Urgesch.* ii.[3] 326 ff.

In the Teutonic area, marriage by purchase was much less in vogue than marriage by capture, but that it prevailed there not merely in isolated cases but as a general practice is rendered probable by its existence among related peoples, such as Indians, Greeks, and Romans (Schrader, p. 321). Further, with reference to the Teutons of primitive times, we have the witness of Tacitus (*Ann.* i. 55) to the predatory marriage of Arminius and the daughter of Segestes, who had been betrothed to another—a proceeding that led to a deadly warfare between the two family groups, just as, according to Olaus Magnus (see above), family feuds were rife among the peoples of the North-east 'propter raptas virgines et arripiendas.'

2. Husband and wife.—By purchase or by capture, then, the young woman passed under her husband's authority—a state which the Romano-Teutonic legal documents speak of as *mundium* (O.H.G. *munt*, 'hand'); in other words, the woman became the man's property. The idea that in the married state the man and the woman enjoyed equal rights in relation to each other is, as regards the Teutonic and Slavic peoples in primitive times, absolutely baseless. A specific confirmation of this is found in the fact that originally the man's act of marriage had quite a different terminology from the woman's. This phenomenon has been preserved most faithfully in the Slavic dialects.

Thus we have, *e.g.*, O. Russ. *ženit'sja* ('to provide oneself with a wife'), as predicated of the husband (Lat. *in matrimonium ducere*), and *vyti zámuž* ('to walk behind the man,' *i.e.* when the woman is taken home), as predicated of the wife (Lat. *nubere*). Terms like Fr. *marier* and Ger. *heiraten* (O.H.G. *hîrât*, 'marriage,' lit. 'house-management'), as used of either the man or the woman, are of relatively late origin.

In the original Aryan language the man to whose authority the woman was thus subject was styled **poti-s* (Skr. *páti-s*, *patitvá*, 'domestic sway,' *i.e.* 'married life'), 'lord and master.' This term may still be traced in the Goth. *brûþ-faþs*, 'bridegroom,' lit. 'maiden's-lord,' and appears also in the Slavic compound **gosti-poti*, Russ. *gospodĭ*, 'master,' lit. 'master of the strangers who come into the family' (O. Slav. *gostĭ*, cf. Lat. *hospes*, from **hosti-pets*). At a still earlier stage of Aryan speech the word **poti-s* meant simply 'himself' (cf. Lith. *pàts*, and Avest. *xvaê-pati*, 'himself'), and it is a singular fact that over wide tracts of the Slavic and Teutonic area the master of the house is to this day habitually referred to as 'himself.' Thus, among the Russian commercial class, which maintains the ancient Russian usages with remarkable fidelity, *sam*, 'himself' (in relation to the wife and the household generally), and *samá*, 'herself' (in relation to the children and the home), are the usual designations of husband and wife respectively. Ostrovskij, the brilliant delineator of this old Russian commercial class, has in his comedies given numerous illustrations of the *samodúrstvo* ('autonymity,' 'self-naming'; cf. Russ. *sam*, 'self,' *durak*, 'fool') of the ancient Muscovite merchant, whose wife and children tremble in his presence. But among the White Russians, Czechs, and Poles, as also throughout the Scandinavian Peninsula, corresponding designations are applied to the peasant and his wife (Norweg. *han sjölv*, *ho sjölv*), while in many parts of Britain 'himself' and 'herself' are popularly used in the same way.

We proceed to a more detailed account of the relations between husband and wife in the earliest

times. It is beyond question that as regards the Teutons and Balto-Slavs we must start from the stage of polygamy. It was not until A.D. 1249 that the ancient Prussians formally bound themselves to abandon the custom of having three or four wives, as heretofore, and to be content with one (cf. Hartknoch, *Das alte u. neue Preussen*, Frankfort and Leipzig, 1684, p. 117). Polygamy, according to the Chronicle of Nestor, was practised also by the ancient Slavs. We must likewise assume that the same condition of things originally prevailed in the case of the Teutons, among whom, and especially among the Norsemen, a wide-spread practice of polygamy was long maintained (cf. Adam of Bremen, iv. 21); here, indeed, we find that a man might have as many as nine wives. Among the Germans, however, as referred to by Tacitus in *Germ.* 18 ('nam prope soli barbarorum singulis uxoribus contenti sunt, exceptis admodum paucis, qui non libidine, sed ob nobilitatem plurimis nuptiis ambiuntur'), there seems to have been a marked leaning towards monogamy. But the concurrent existence of an extensive system of concubinage is proved by the fact that the term *kebisa* ('concubine') is found in all the Teutonic dialects.

The strongest possible contrast to this sexual freedom on the husband's part is seen in the position of the wife. The fearful penalties wreaked upon the unfaithful wife among Teutons and Slavs are indicated in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. p. 499 ff. That article emphasizes the fact that the erring wife was punished not so much for unchastity in the proper sense as for yielding her person to another without the knowledge and consent of her husband and owner. This may be safely inferred from extant traces of two institutions discussed in the article referred to, viz. vicarious procreation and lending a wife to a guest, both of which are found in the Teutonic, and the former also in the Slavic domain. And in another respect the patriarchal family system was everywhere associated with the depreciation and servitude of women. The idea that woman is in some way a creature of inferior rank prevails to the present day among the rural population of Eastern and South-eastern Europe. The wife of the Russian peasant could not well conceive of a mode of life without the *učit'* ('discipline'), *i.e.* flogging by the husband. If, when she did wrong, her husband did not have recourse to the 'silken whip,' which in Russian folk-song is a standing household article, she would think that he no longer loved her. Nor, except by reference to similar practices, or, at least, to the vestiges of such practices, among the Teutons, is it possible to explain what, according to the writer of the German *Nibelungenlied*, Queen Kriemhild, after her wrathful insults to Brunhild, says of her husband (xv. 894):

> '"Daz hât mich sît gerouwen"—sprach daz edel wîp—
> "ouch hât er sô zerblouwen dar umbe mînen lîp:
> daz ich ie beswârte ir mit rede den muot,
> daz hât vil wol errochen der helt küene unde guot."'

Of no less significance for the position of women was the universal custom which forbade them to eat with the men, and compelled them to take their meals by themselves. Thus, when the Nibelungs came to Bechelâren, they were met by the Margrave Rüedigêr and his wife, and then, as we are told (xxvii. 1671):

> 'Nâch gewonheite dô schieden si sich dâ:
> ritter unde frouwen die giengen anderswâ.'

In many districts, as, *e.g.*, in the island of Sjælland, the men sat, while the women stood, at table, the wife taking her position next to her husband, and then the daughters and maids to her left. In Servia, as recently as the reign of Milosh Obrenovitch, the wife and daughters stood at meals, even when guests were present. The separation of the sexes at meal-times was still a common practice in the Middle Ages, and there is direct historical evidence of the fact that in the Roman Catholic formula of divorce, 'separatio quoad thorum et mensam,' the *mensa* ('board') was a later addition.

On the whole, while we must admit that what Tacitus (*Germ.* 18) says of marriage among the Germans is somewhat idealized, we shall hardly find a more adequate representation of the relations between husband and wife than that given by him in ch. 15:

> 'Quotiens bella non ineunt, non multum venatibus, plus per otium transigunt, dediti somno ciboque. Fortissimus quisque ac bellicosissimus nihil agens, delegata domus et penatium et agrorum cura feminis senibusque et infirmissimo cuique ex familia, ipsi hebent: mira diversitate naturae, cum iidem homines sic ament inertiam et oderint quietem.'

All property belonged to the husband. By the oldest Russian code (cf. L. K. Goetz, *Das russische Recht*, vol. i., Stuttgart, 1910, §§ 118, 120), married daughters inherited nothing, and the unmarried only when there were no sons; though the sons were required to give a dowry to their sisters. The present law of use and wont operates in similar fashion to this day in the larger family of the patriarchal household. The ancient Norse code contained an ordinance to the same effect: 'the man goes to the inheritance; the woman from it.' It is impossible to imagine a more decided contrast to the practice of the non-Aryan peoples of ancient Europe (see above)—the practice, that is to say, by which in many cases the daughters inherited everything, and provided for the sons.

Among the Teutons and Slavs, moreover, the wife—overworked, exposed to all manner of ill-usage, and all but incapable of inheriting—was, so to speak, bound hand and foot to her husband. The *Lex Burgundiana*, xxxiv. 1, ordains: 'Si qua mulier maritum suum, cui legitime iuncta est, dimiserit, necetur in luto'; *i.e.*, she was to suffer the most degrading form of capital punishment—that commonly inflicted upon cowards and perpetrators of unnatural crime (cf. Tac. *Germ.* 12).

Unenviable as was the wife's position during her husband's lifetime, however, it was still preferable to her lot after his death. Here philology reveals the suggestive fact that, while not only the original Aryan language, but also the earliest Teutonic and Slavic dialects, had a special term for 'widow' (Goth. *viduvô*; O. Slav. *vidova*; cf. Lat. *vidua*, Skr. *vidhávā*), they had none for 'widower.' The explanation of this is that a material, as apart from a merely formal, import attached only to the position of the bereaved wife. The widower could take another mate whenever he chose, but the widow had no such liberty of action. Not only in ancient India, and among Scythians and Thracians, but among Teutons and Slavs as well, it was the rule that, when a husband died, his wife, or one of his wives, should be put to death at his pyre or grave, and be burned or buried with him, the idea being that she would thus continue to serve him in the life beyond as she had done here. Our earliest information regarding this practice on Teutonic soil comes from Procopius (*de Bell. Goth.* ii. 14). He tells us that the widow who did not wish to become the object of undying scorn and of her kindred's hate hanged herself beside her husband's grave; and Bonifacius (Jaffé, *Monumenta Moguntina*, Berlin, 1866, p. 172) writes of the Slavs to the same effect:

> 'Winedi, quod est foedissimum et deterrimum genus hominum, tam magno zelo matrimonii amorem mutuum observant, ut mulier, viro proprio mortuo, vivere recuset. Et laudibilis mulier inter illos esse iudicatur, quia propria manu sibi mortem intulit, et in una strue pariter ardeat cum viro suo' (cf. art. ARYAN RELIGION, vol. ii. p. 22b).

It must nevertheless be admitted that the somewhat sombre picture of women's position among

the Teutons and Slavs of archaic times is here and there relieved by brighter touches. Women were regarded as prophetesses (Tac. *Germ.* 8: 'inesse quin etiam sanctum aliquid et providum putant, nec aut consilia earum aspernantur aut responsa neglegunt'; for their horrible modes of divination, see art. ARYAN RELIGION, vol. ii. p. 54[b], and DIVINATION [Teut.], vol. iv. p. 827), as physicians (Tac. *ib.* 7: 'ad matres, ad coniuges vulnera ferunt; nec illae numerare aut exigere plagas pavent'), and as helpers in war (Tac. *loc. cit.*: 'cibosque et hortamina pugnantibus gestant'). These various traits are found also among the Slavs, and especially the southern Slavs, as, *e.g.*, in Montenegro. Over all the Slavic area, moreover, as upon Teutonic soil, women were regarded as specially conversant with the occult powers of Nature, with medicinal roots and plants, and with the most potent charms and incantations.

3. The other members of the household.—As we saw above, the primitive Aryan terms for family relationships included a number of words applied to relations by marriage. Thus we noted terms for 'daughter-in-law,' for 'father-in-law' and 'mother-in-law,' as also for 'husband's brother,' 'husband's sister,' and 'husband's brother's wife.' It will be observed that the names indicated in the latter portion of this list applied only to the husband's kindred in relation to his wife, but a closer examination of the Aryan terms for 'father-in-law' (O.H.G. *suehur*, O. Slav. *svekrŭ*, Lith. *szeszìuras*, Lat. *socer*, Gr. ἑκυρός, Skr. *śváśura*) and 'mother-in-law' (O.H.G. *suigar*, O. Slav. *svekry*, Lat. *socrus*, Gr. ἑκυρά, Skr. *śvaśrū*) shows that those words likewise originally denoted the father and mother of the husband only. Thus, not only in Greek, but in the Lithuanian and Slavic dialects as well, this is the archaic and proper idiom, and we need therefore have no hesitation in affirming that the application of the O.H.G. terms *suehur* (Ger. *Schwäher*) and *suigar* (Ger. *Schwieger*), as also of the Lat. *socer* and *socrus*, to the father and mother of the wife likewise was a later usage. Hence, too, it is impossible to translate the words 'father-in-law' and 'mother-in-law' into a Slavic tongue, such as Russian, unless it be known first of all whether the persons referred to are the parents of the husband or of the wife. Only in the former case does Russian use the words *svěku* and *svekróv'*, corresponding to O.H.G. *suehur* and *suigar*, while for the wife's father and mother idiom demands the palpably more modern terms *testĭ* and *tĕšča*, which are peculiar to the Slavic languages. It follows, therefore, that the Aryan terms for affinities took shape only as applied to the young wife's relation to the kindred of the man into whose home she had come.

Now, the substratum of reality which underlies these linguistic phenomena can be nothing else than what—in contradistinction to the separate family as we now have it—is variously called the 'house-community,' 'hearth-circle,' *Herdgemeinschaft* (Germ.), or 'undivided family,' *i.e.* that family organization in which parents and sons and the wives and children of the latter lived together in a single household. It is no merely accidental circumstance that the Slavs, who have retained not only—like the Teutons—the verbal forms, but also the original usage, of the Aryan terms denoting marriage affinities, should have likewise maintained the institution of the house-community from the earliest times to the present day. Russian writers who essay to depict the life of the common people of their country frequently bring before us such undivided households. Thus, *e.g.*, Turgeniev, in the first sketch in his *Annals of a Sportsman* (1846; Eng. tr., New York, 1885), describes the family life of a peasant who lives in a joint-household with a large group of sons and their wives.

The original Slavic word for 'family' appears in the Russ. *semĭjá*. The young woman who joined such family by marriage was called 'the alien side' (Russ. *čužája storoná*), while the bridegroom, to whom and to whose kindred she was *nevesta* (probably 'the unknown'), was similarly called *čuzeninŭ*, 'the stranger'—a further evidence of the fact that the family of the husband and that of the wife were originally quite distinct. To the Slavic *semĭjá* corresponds—in meaning and probably also in etymology—the archaic Teutonic root **hîwa* (cf. Goth. *heiva-frauja*, 'master of the house'), the specific term for the Teutonic house-community (cf., most recently, F. Kauffmann, *Wörter und Sachen*, Heidelberg, 1911, ii. 26 ff.). The epoch in which the separate family, *i.e.* the system according to which a son left his father's house at his marriage and founded a home of his own, superseded the house-community on Teutonic soil (where the change occurred earlier than among the Slavs) is a problem that awaits further investigation. But it is beyond question that at one time the same conditions existed among the Teutons as we saw above to have prevailed among the Slavs.

We must now turn to speak of the persons who thus lived together in the undivided household, which is the earliest traceable form of the family among the Aryan and, derivatively, the Teutonic and Slavic peoples.

(*a*) *Parents and children.*—Possibly the term that comes nearest the primitive conception associated with the former word is the Goth. *fadrein*, lit. 'fatherhood,' which Ulfilas uses for 'parents,' and which, in its derivation from the word for 'father,' tacitly includes the designation of 'mother' as well. The absolute authority of the father over his children began from the moment of birth, as it lay within his option either to recognize the newly-born infant by the symbolic rite of 'lifting' it, or to doom it to exposure. With the former act was associated a kind of baptismal initiation, the child being immersed, immediately after its birth, in the waters of the Rhine, 'qui spurios infantes undis abripit, tamquam impuri lecti vindex' (cf. Cluver, *Germania antiqua*, 1663, p. 155). The primitive Teutonic—and therefore pre-Christian—ceremony denoted by the Goth. verb *daupjan*, 'to baptize,' would thus seem to have served as a test of legitimacy, and it is worthy of note that an ablutionary ceremony of similar import is found also among the Babylonians (cf. *ZVRW* xxiii. [1909] 434 ff.). The right of exposing infants, which, notwithstanding the averment of Tacitus (*Germ.* 19: 'numerum liberorum finire flagitium habetur'), was frequently exercised among the Teutons, doubtless bore most heavily upon females, the birth of whom was in ancient times so frequently regarded as a calamity. Even to-day, indeed, if a Lithuanian, whose family numbers five, three sons and two daughters, is asked how many children he has, he will answer 'Three,' as he leaves the females out of account. What Cæsar (*de Bell. Gall.* vi. 19) says of the Gauls ('Viri in uxores, sicuti in liberos, vitae necisque habent potestatem') holds good without qualification also of the Teutons, Letts, and Slavs. Of the Frisians, Tacitus (*Ann.* iv. 72) writes: 'Ac primo boves ipsos, mox agros, postremo corpora coniugum aut liberorum servitio tradebant'; while the Russian peasant, as depicted in folk-song and village tale, could exercise, even down to modern times, the same unlimited authority (*patria potestas*) over his family as was enjoyed by the *paterfamilias* of ancient Rome.

(*b*) *The aged.*—The family circle of the house-community would, of course, include grandfathers

and grandmothers, grand-uncles and grand-aunts, and even great-grandparents, living in the 'old people's quarters.' Their lot would scarcely be a happy one, for the temperament of primitive peoples, as of the peasantry of to-day, was hard and unsentimental. In point of fact, we know that among the Teutonic and Baltic tribes, as in Europe and Asia generally, it was a common practice to abandon the aged, with or without their consent; cf. with reference to the Teutonic Heruli, Procop. *de Bell. Goth.* ii. 14: *ἐπειδάν τις αὐτῶν ἢ γήρᾳ ἢ νόσῳ ἁλῴη ἐπάναγκές οἱ ἐγίνετο, τοὺς συγγενεῖς αἰτεῖσθαι ὅτι τάχιστα ἐξ ἀνθρώπων αὐτὸν ἀφανίζειν*; and, with reference to the ancient Prussians, Hartknoch, *op. cit.* p. 181: 'At the order of the *waidewuti* (*i.e.* priest) they smothered their own parents when they became old or fell into a severe illness, so that they should incur no unnecessary expense in their regard.'

(*c*) *Brother and sister.*—Of the relationships among the younger members of the house-community, that of brother and sister merits special notice. Among Teutons and Slavs, as among other Aryan peoples, the brother might be designated the moral sponsor of his sister, and, after their father's death, her guardian in general. It was the custom in White Russia, when a bride was found on the marriage night not to be a maid, to hang a halter round the neck of her brother, and to compel him to wear it throughout the marriage feast. In Russian folk-song the brother is represented as taking a prominent part also in the transactions regarding the bride-price. We find an indication of the Teutonic practice in a verse of the *Nibelungenlied* (i. 4):

'Ir (Kriemhild) pflâgen drî künege edel unde rich . . .
diu frouwe was ir swester: die helde hêtens in ir pflegen.

Among the Letto-Lithuanians the strong bond of affection between brother and sister forms at once a special feature of common life and a favourite theme of popular poetry.

(*d*) *Uncle and nephew.*—It was noted above that the Aryan term for 'father's brother' can be traced in the O.H.G. *fatureo*, Lat. *patruus*, Gr. *πάτρως*, Skr. *pitṛvya*. We find no corresponding Aryan term for 'mother's brother,' who, of course, was not a member of the agnatically constituted house-community; but it is worthy of note that the Teutonic (O.H.G. *ôheim*), Lithuanian (*awynas*), Old Prussian (*awis*), and Slavic (*ujĭ*) forms for 'uncle' are all derived, though in quite different ways, from the Aryan root for 'grandfather' and 'grandmother' (Lat. *avus*, Goth. *avô*). This fact has not as yet been satisfactorily explained. It is beyond question, however, that in several of the Teutonic dialects, as in the Celtic group throughout, the Aryan word for 'grandchild' (Skr. *nápât*, Lat. *nepos*, etc.) has by a corresponding linguistic process come to mean 'nephew' in the sense of sister's son. Now, these two more recently formed correlatives, uncle and nephew (*i.e.* mother's brother and sister's son), acquired great importance among the Teutonic peoples, as appears not only from the remarks of Tacitus (*Germ.* 20: 'Sororum filiis idem apud avunculum qui apud patrem honor. Quidam sanctiorem artioremque hunc nexum sanguinis arbitrantur'), but also from the fact that in Old English and Old Danish poetry uncle and nephew on the female side are represented as being most intimately associated alike in peace and in war. This is not to be explained by a reference to a matriarchal system among the primitive Teutons, as the ancient law of succession there was of the agnatic form (*Germ.* 20). But it is a possible conjecture that the Teutons were influenced in this respect by non-Aryan peoples who reckoned by female descent, and that among the former the mother's brother thus came to enjoy what was rather a position of honour than a strictly legal status.

(*e*) *Mother-in-law and daughter-in-law.*—As we have seen, the son brought his bride (O.H.G. *brût*, Russ. *nevesta*) into his father's house, and lived with her in the circle of his own kindred. The converse case, *i.e.* where the bridegroom joined the wife's household and became an 'adopted one,' or 'incomer' (Russ.), a 'house-son-in-law' (Serb), or a 're-heater' (Lith. for one who marries a widow), is also, as these terms indicate, to be met with in all parts, but was certainly of sporadic occurrence, and must not be postulated as a characteristic feature of the earliest times. The young wife's residence with her husband's parents was at first no pleasant experience for her. As the Russian folk-songs indicate, with abundance of concrete detail, she was an object of mockery, and the hardest drudgery was laid upon her. She suffered most, however, at the hands of her mother-in-law, who often resorted to the knout; and, indeed, as the house-community was the nursery of *patria potestas*, and of the tutelage of women, so was it the source of the old popular notion of the 'wicked mother-in-law.' That expression applied in ancient times to the husband's mother only, not to the wife's mother (Russ. *tëšča*)—or, at least, not to the latter in relation to the son-in-law (O.H.G. *eidam*, 'one bound by oath,' Russ. *zjatĭ*)—for, as is evident from what has been said above, no proper relationship was supposed to subsist between mother-in-law and son-in-law at all; and, when this type of affinity came at length to be recognized among the various peoples, it was rather the son-in-law that by his effrontery and avarice was accounted the more 'wicked' party, as is the case to-day throughout the East, North-east, and South-east of Europe. The 'mischievous mother-in-law' (as the *wife's* mother) is a product of modern times, and comes into recognition in connexion with the separate household of the young married pair. The 'wicked mother-in-law' in this sense is first heard of *c.* A.D. 1430, in a piece by the German poet Muskatblut.

Further, the frequent existence of licentious relations between *daughter-in-law and father-in-law*—a state of things known as *snochačestvo*, and notoriously characteristic of the Russian peasantry at the present day—should be noted as a typical feature of the house-community (cf. art. CHASTITY [Teut. and Balto-Slav.], vol. iii. p. 501[b]).

(*f*) *The widow.*—The melancholy fate of the widow in the dawn of the Aryan period has already been touched upon. Even when she was not forced to follow her husband in death, she would doubtless be prevented from marrying again (cf. Tac. *Germ.* 19: 'melius quidem adhuc eae civitates in quibus tantum virgines nubunt et cum spe votoque uxoris semel transigitur'). It seems to have been the ancient practice that the son, after his father's death, should take possession of his stepmother or stepmothers; cf. Procop. *de Bell. Goth.* iv. 20: *Ῥαδίγερ ὁ παῖς ξυνοικιζέσθω τῇ μητρυιᾷ τὸ λοιπὸν τῇ αὐτοῦ, καθάπερ ὁ πάτριος ἡμῖν ἐφίησι νόμος.*

(*g*) *The bachelor.*—The house-community was characterized by the rarity rather than by the frequency of bachelorhood. It cannot be doubted that the primitive Aryan race regarded marriage as an obligation from which there was no discharge (for the grounds of this idea, see art. ARYAN RELIGION, vol. ii. p. 29[a]). This view still prevails throughout Eastern and South-eastern Europe. Thus, P. A. Rovinskij, an eminent authority on the social life of these regions, writes as follows of the Russian and Montenegrin points of view:

'With us (*i.e.* in Russia) the people look upon an unmarried youth as imperfect and incomplete; and to live without a wife is regarded as unlawful. In Montenegro this unalterable obligation of marriage is insisted upon still more emphatically; a man

can be designated as a human being (*čoek*) only when he is married. Otherwise he will always be spoken of as but a "youth," lit. "child" (*djete*). In Servia and Bulgaria likewise marriage is held to be a duty absolutely binding upon all.'

Similar views prevail in certain rural districts of Germany.

A man who had died unmarried was still an object of the survivors' solicitude. The Arabic traveller Mas'ūdī, who visited Russia in his commercial journeys, writes thus of the people as he saw them:

'They cremate their dead, laying their weapons, their beasts of burden, and their ornaments upon the same funeral pyre. When a man dies, his wife is burned alive with him; but when the wife dies, the husband does not submit to the like fate. When a man dies unmarried, however, they provide him with a wife after his death.'

Traces of this practice of 'death-marriage' are found both on Slavic and on Teutonic soil (cf., further, *ERE* ii. 22 f.).

It is in full accordance with these data that the terms used for 'bachelor' in the languages of Eastern Europe are of recent formation, and are either loan-words (*e.g.* Turk. *bek'ár*) or derived from epithets applied to the lowest ranks of the people (*e.g.* Russ. *bobylĭ*, lit. 'proletarian,' 'landless peasant,' 'sponge'). Traces of bachelorhood can be followed further back in the West, among the Teutons. One such trace appears in the modern Germ. term for 'old bachelor,' *Hagestolz* (A.S. *hægesteald*). The word means literally 'enclosure-owner,' and was originally the technical term for the peasant who had no allotment in the communal land of the Teutonic settlements, but was restricted to a small fenced-in portion of the soil, quite insufficient for the support of a family. The Danish word for 'bachelor,' *ungkarl*, in contradistinction to *karl*, 'free land-owner,' 'yeoman,' points to similar conditions.

(*h*) *Slaves.*—In the lower stages of civilization there is never any marked outward distinction between bond and free. What Tacitus records of the Germans in this regard (*Germ.* 20: 'Dominum ac servum nullis educationis deliciis dignoscas: inter eadem pecora, in eadem humo degunt, donec aetas separet ingenuos, virtus agnoscat') is proved by the evidence of language to have been true of the Slavs no less than of the Teutons, as the Teutonic and Slavic designations of male and female slaves (*e.g.* A.S. *hīwan* [pl.] 'domestics'; O. Slav. *semija*, 'mancipia'; Lith. *szeimyna*, 'retainers') are in many cases derived from the already noted terms for 'house-community,' **hīwa* and *semĭjá*, thus showing that the slaves likewise were reckoned among the inmates of the house.

LITERATURE.—In addition to the literature given throughout the art., cf. O. Schrader, *Reallex. d. indogerm. Altertumskunde*, Strassburg, 1901 (2nd ed. in preparation), *Die Schwiegermutter u. der Hagestolz*, Brunswick, 1904, *Totenhochzeit*, Jena, 1904, *Sprachvergl. u. Urgesch.*³, Jena, 1907 (esp. ii.³ 369 ff.), and *Die Indogermanen*, Leipzig, 1911 (esp. p. 74 ff.).

O. SCHRADER.

FAN (Anglo-Sax. 'fann,' from Lat. *vannus* [**uet-no-s*]).—An instrument for purifying grain by throwing it into the air. Cognates of *vannus* are *ventus*, 'wind,' 'winnow' (see Walde, *Lat. etymol. Wörterbuch*², Heidelberg, 1910, *s.v.* 'Vannus'). For variant English forms of the word and historical steps in meaning, see *OED* and the *English Dialect Dictionary* (*s.v.*). The Gr. equivalent of *vannus*, λίκνον, and its by-form, νεῖκλον, go back to a root **neiqō*, 'to clean' (cf. νίζω, 'to wash'); the *l* form specialized in Greek into the sense of cleaning 'grain' (see J. Schmidt, *Kritik der Sonantentheorie*, Weimar, 1895, p. 107 f.). The Gr. word for the fork or shovel form of fan, πτύον, is probably from an onomatopoetic root *pte*, meaning 'to spit out.' The Gr. and Lat. words for 'sieve,' κόσκινον and *cribrum*, mean simply 'separators.' Normally they are used for perforated instruments, but Plato's κόσκινον τετρημένον (*Gorgias*, 493 B) may point to a time when the sieve, like the fan, was not perforated.

1. Shapes of fan and methods of use.—Two principal forms obtain. (1) A long-handled instrument, which may be a fork, a toothed spade, or a shovel. It is used like the modern hayfork. After the grain is threshed, the mixture of broken straw, chaff, and corn is turned and tossed up, so that the wind may blow away the lighter material. The 'fan' and shovel of Is 30²⁴ are instruments of this kind, such as are still in use in modern Palestine (see *HDB*, art. 'Agriculture' [cf. also *ib.* art. 'Shovel'], where specimens are figured), and, indeed, all over the world. Such instruments lent their symbolism to religion, *e.g.* Lk 3¹⁷ 'whose fan is in his hand, and he will thoroughly purge his floor'; but, so far as we know, they were not employed in Palestine in actual ritual. But on the steatite vase of Hagia Triada in Crete (*JHS* xxiv. [1904] 249, fig. 7; see Literature, *infra*) pronged forks are carried in what seems to be a ritual harvest procession. On an Egyptian sculptured slab of the XVIIIth dynasty, now in Bologna, a winnowing-spade is seen erected on a heap of corn offered to the serpent-goddess of the granary, RNWT. About it are grouped two pairs of hand-scoops, a pair of sweepers, and a three-pronged fork (*JHS*, *loc. cit.*, fig. 1). The custom still prevails in Teneriffe of erecting the winnowing-spade when the work is over. But it seems to have no ritual association. Among the Greeks the winnowing-spade (πτύον) was set up in honour of Demeter. Theocritus at the end of his Harvest Idyll (vii. 155) prays:

'O once again may it be mine to plant
The great fan on her corn heap, while she stands
Smiling, with sheaves and poppies in her hands.'

(2) It is the second form of winnower, the winnowing-basket, that is of cardinal importance in ancient ritual and mysticism, and this for a reason that will appear immediately. Much confusion has been caused by the fact that our word 'fan' has been used indiscriminately to translate alike the Latin *ventilabrum* and *vannus*, and the Greek θρῖναξ, ἀθηρηλοιγός, πτύον, and λίκνον. The confusion is now inevitable, since the beautiful word 'fan' has passed into English literature as the rendering of two quite distinct implements, which have only this in common, that they are both used for cleaning corn. The use of the winnowing-spade or fork (*ventilabrum*, θρῖναξ [poet. ἀθηρηλοιγός], πτύον) has been already explained; the *vannus*, λίκνον, and winnowing-basket, or corb, of modern times remains.

FIG. 1. Fan from France.

Its shape is seen in fig. 1, a modern winnowing-basket (or fan) from France, now in the Ethnographical Museum, Cambridge. The method of its use, now rapidly becoming a lost art, is seen in fig. 2; the essential feature in the winnow-corb, as for clearness and brevity we shall call it, is its shovel shape, one side being left open. The distinguishing point in its use is that, in the winnowing by the corb, as contrasted with the fork, though the mixture of grain and chaff

is in a sense ventilated, the wind plays no part in the process. By a particular knack of jerking and working the basket—a knack difficult to acquire and almost impossible to describe—the chaff is gradually propelled forward and out of the basket

FIG. 2. Fan in use.

and the grain left clean. Columella (1st cent. B.C.) knew that the wind played no part in the use of the *vannus*. He says (ii. 21): 'If the wind be low in all quarters, let the grain be cleaned by fans (*vannis expurgentur*).' Broadly speaking, the fork or spade was used for rough preliminary work, the basket for finer cleaning. Some further confusion in terminology was caused by the fact that not only were winnowing-fork and winnowing-basket confused, but winnowing-basket was by later writers identified with winnowing-sieve (*cribrum*, *κόσκινον*). All had, of course, in common this factor only, that they were grain-cleaners; identity in function led to confusion as to form. That the winnowing-*basket* was called a 'fan' or 'van' in England, and was of substantially the same shape and use as that in fig. 2, is happily certain from a 14th cent. brass in the Church of Chartham (C. Boutell, *Monumental Brasses of England*, London, 1849, p. 35). On the surcoat, ailettes, and shield of Sir Robert de Setvans are emblazoned the family arms, the seven 'fans' or baskets.

2. Ritual use and mysticism of the winnow-corb (*vannus, liknon*) **among the Greeks and Romans.**—The *locus classicus* as to the sanctity of the winnow-corb is, of course, the passage in the *Georgics* of Vergil (i. 165):

> 'Virgea praeterea Celei vilisque supellex,
> Arbuteae crates, et *mystica vannus Iacchi*.'

It is clear that to Vergil the *vannus* is a *light* agricultural implement made of wicker-work. He assumes its mysticism as known; but Servius in his commentary, though very confused as to forms, (1) makes clear that the *vannus* is our winnow-corb, and (2) gives some cause for the epithet *mystica*. A portion of this long note must be quoted:

> 'The mystic fan of Iacchus, that is, the sieve of the threshing-floor. He calls it the mystic *vannus* of Iacchus because the rites of Father Liber had reference to the purification of the soul, and men are purified in his mysteries as grain is purified by fans. . . . Some add that Father Liber was called by the Greeks *Liknites*. Moreover, the *vannus* is called by them *liknon*, in which he is currently said to have been placed after he was born from his mother's womb. Others explain its being called "mystic" by saying that the *vannus* is a large wicker vessel, in which peasants, because it was of large size, used to heap their firstfruits and consecrate it to Liber and Libera. Hence it is called "mystic".'

The Latin *vannus* being the same as the Greek λίκνον, we can elucidate *vannus* from Greek usage. Harpocration (*s.v.* λίκνον) has left us this remarkable statement:

> 'The *liknon* is serviceable for every rite of initiation, and every sacrifice.'

We begin with sacrifice. The *liknon* was serviceable for sacrifice, simply because it was a convenient basket in which to pile up firstfruits. It was not made to be a carrier—that is clear from the open end, which could only serve the purpose of winnowing—but it could and did serve to hold fruit or grain.

In a fragment of Sophocles (760 [Nauck]) the Athenians are addressed as

> 'Ye who pray
> To Ergane, your bright-eyed child of Zeus,
> With service of your winnow-corbs set up.'

In a Hellenistic relief (fig. 3), now in Munich (Glyptothek, no. 601; T. Schreiber, *Hellen. Reliefbilder*, Leipzig, 1899, Taf. 80*a*), we see such a service: a little circular shrine, past which a peasant is going to market; in the middle of the shrine an ornamental pillar surmounted by the shovel-shaped wicker-basket from which hang bells to scare away evil influences; in the basket are fruits, leaves, and the *phallos*, the sign of fertility. Servius is confirmed by this and many other monuments.

FIG. 3. Hellenistic relief: *liknon* holding firstfruits.

The *liknon*, Servius tells us, was used as a cradle. For this the shoe-shaped basket was obviously convenient; the cradles of to-day are of similar shape. Dionysus as a child was called *Liknites*, 'He of the Cradle.' On the Pashley sarcophagus, now in the Fitzwilliam Museum at Cambridge (fig. 4), we see 'Him of the Cradle' carried by two men bearing torches. The *liknon* as cradle is closed in at the end, lest the child fall out. About this simple and convenient use of the *liknon* as cradle, a primitive mysticism of the 'sympathetic magic' kind speedily grew up.

The scholiast on Callimachus (*Hymn*. i. 48), in telling of the *liknon*-cradle of Zeus, says:

> 'In old times they used to put babies to sleep in winnow-corbs as an omen for wealth and fruits.'

The child was put in the winnow-corb for what we should call 'luck.' Another scholiast (*ap.* Aratus, *Phæn*. 268) says that this was done immediately after birth (τὰ γὰρ βρέφη τὰ πρῶτον γεννώμενα, κτλ.).

The same magical intent, dwindling gradually into mere symbolism, explains the use of the *liknon* in marriage rites. The pseudo-Plutarch (*Prov. Alex*. xvi.) says:

> 'It was the custom in Athens at weddings that a boy, both of whose parents were alive (ἀμφιθαλῆ παῖδα), should carry a *liknon* full of loaves, and thereon pronounce the words, "Bad have I fled, better have I found" (ἔφυγον κακόν, εὗρον ἄμεινον).'

The loaves of bread (ἄρτος, fermented bread) have

taken the place of more primitive offerings; but the symbolism, or rather magic, is the same. At a marriage every precaution is taken to suggest and induce fertility. On a black-figured vase now in the British Museum (Cat. B. 174) we see (fig. 5) a marriage procession. Two of the figures, the

FIG. 4. Pashley Sarcophagus: Dionysus Liknites.

first and third, carry winnow-corbs on their heads. One of the figures stands close to the veiled bride. A handle and the wicker-work of the corb are very clearly seen.

FIG. 5. Black-figured vase: *liknon* in marriage procession.

Marriage is 'an excellent mystery.' The Greek conceived of it as a rite of initiation. The plural word τέλη covered all mysteries and initiation rites, while the singular form τέλος was specially used of marriage. All rites of birth, of puberty, of marriage, and of death were and are to the primitive mind *rites de passage*, *i.e.* rites of transition from one social state to another. The name τέλος, which we translate 'accomplishment,' meant originally 'growing up,' becoming a man; ἀνὴρ τέλειος is a full-grown man. When a boy was full-grown, he was made a tribesman, and initiated into tribal customs, tribal dances, and the like. The various and complex ceremonies that attend this and other initiation have primarily but two ends, which are really one and contain the gist of all magic. They are purification, and the promotion of fertility. This double end was excellently symbolized by the *liknon*. It was a purifier because it was a winnower; it was a fertility-vehicle because it was a basket for firstfruits. Hence, in the rare scenes where initiation-ceremonies are represented, the *liknon* is always figured, usually on the head of the veiled initiate. A good instance is given in fig. 6 from a cinerary urn in the Museo delle Terme at Rome (*Helbig Cat.* 1168). The mysteries are Eleusinian in kind—judging from the fact that on the other side of the urn Demeter and her snake are figured. In fig. 6 we see the pig sacrificed for purification. The veiled candidate is seated with his right foot on a ram's skull. Over his head a priestess holds a *liknon*. Duly purified and fertilized, he will be able to pronounce the words, 'Bad have I fled, better have I found.'

FIG. 6. Cinerary urn: *liknon* at Eleusinian Mysteries.

Briefly to resume: in the mysticism of the 'fan' two elements are distinguishable: (1) purification, and (2) magical promotion of fertility. Any form of winnower, be it fork or basket, might have served as the symbol and vehicle of purification; but, as a matter of actual fact, mysticism gathered only round the basket, *not* the fork. Hence it is probable that the main element of the symbolism focused in the notion of fertility, and that the idea of purification was at first subsidiary. Later, when the idea of sin and release from it became prominent, the fan as purifier was more and more emphasized; and its symbolism was still further developed in relation to its perforated successor, the sieve. It must, however, always be remembered that, alien though it is to modern thinking, to the primitive mind purification and fertility charms are never far asunder. Fertility is largely induced by purification, *i.e.* by the purging away of all evil influences hostile to birth and growth. The other element in its induction is the bringing of things into contact with the source of growth or other living things,—plants, fruits, running water, or whatever is supposed to be charged with life and grace, or, as the Polynesians call it, *mana*. The *liknon* was the vehicle of both procedures, and its use shows very clearly how the highest spiritual mysticism of New Birth and Regeneration may have its source in a rudimentary magic. You lay a child in a winnow-corb, you put a corb of fruits on a boy's head at a puberty rite, you carry a corb of grain and fruits in a marriage procession, and the winnow-corb becomes at once the symbol and the sacrament of the whole physical, moral, and spiritual field covered by the formulary ἔφυγον κακόν, εὗρον ἄμεινον.

[3. **The winnowing-basket in India.**—The Indian equivalent of the fan, the winnowing-basket (*śūrpa*), also merits attention in this connexion. It is one of the concomitants of the wedding ceremony in the period of the *sūtras*, and on that occasion the *śūrpa*, containing four handfuls of roasted grain mixed with *śamī* leaves, is placed behind the wedding fire (Hillebrandt, *Rituallit.* [=*GIAP* iii. 2], Strassburg, 1897, p. 65 f.). Among the modern Baiswār, after the clothes of the newly-wedded pair have been knotted together,

'they do the usual five revolutions round the cotton tree, while the bridegroom holds a winnowing-fan (*sūp*) into which the bride's brother pours a little parched rice each time as they go round. The bride sprinkles this grain on the ground out of the fan, and both retire into the retiring room' (Crooke, *TC* i. 129).

The winnowing-fan is also used among the Kols and Orāons in selecting a new village priest, since 'by its magical power it drags the person who

holds it towards the individual on whom the sacred mantle has fallen' (Crooke, *PR* ii. 189).

But, if the winnowing-basket, through its association with grain, is often associated with rites for prosperity and increase, it is also employed to separate the evil from the good, so that Mātaṅgī Śaktī, a form of Durgā (*q.v.*), 'carries a broom and winnowing-fan with which she sifts mankind' (*PR* i. 133); and the essential difference between the winnowing-basket and the sieve is neatly given by a Sanskrit proverb (Böhtlingk, *Ind. Sprüche*², St. Petersburg, 1870–73, no. 6235) which says that 'good men, like a winnowing-basket, cast out faults and retain virtues; but evil folk, like a sieve (*chālanī*), retain faults and let virtues go.'—LOUIS H. GRAY.]

LITERATURE.—J. E. Harrison, 'Mystica Vannus Iacchi,' in *JHS* xxiii. [1903] 292–324 and xxiv. [1904] 241–254; also *BSA* x. [1903–1904]; cf. *Proleg. to the Study of Gr. Religion*², Cambridge, 1907, pp. 519–535. To these three articles reference may be made for full details and illustrations of the various forms of fan in use in Egypt, and especially Greece, and for modern forms of fan so far as they illustrate these. For the final clearing up of the peculiar form and use of the winnow-corb the present writer is entirely indebted to Dr. Francis Darwin, who procured for her from France the specimen figured in fig. 1, and whose old gardener, as shown in fig. 2, is one of the few surviving exponents in England of an almost lost art. It is impossible to discuss or even enumerate the slightly variant forms of 'fan' in use all over the world; and for the purposes of religious symbolism nothing would be gained by it, as they are all modifications of either fork, spade, basket, or sieve. It may be noted that in Finland, and, so far as the writer is aware, only there, all three forms appear in use together; see Grotenfelt, *Det primitiva Yordbrukets Metoder i Finland*, Helsingfors, 1899. The three Finnish forms are reproduced from his book in *JHS*, 1903, p. 309, fig. 10, and show very well the phases of transition from one to the other. Reference may, finally, be made to O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, pp. 764, 965 f.

FANCY.—See ILLUSION, IMAGINATION.

FAQĪR.—See DERVISH.

FĀRĀBĪ.—**1. Life and writings.**—Al-Fārābi, one of Islām's leading philosophers, was of Turkish origin. His full name was Muhammad, son of Muhammad, son of Tarkhān Abū Naṣr al-Fārābi. He was born at Fārāb, situated on the Jaxartes (*Syr Darya*), the modern Otrar. Coming to Baghdad, he studied under the Christian doctor Johanna, son of Hilān. Another of his teachers was Abū Bishr Mattā, known as a translator of Greek works. He next proceeded to Aleppo, to the court of Saif ad-Daulah, son of Hamdān, and led a somewhat retired life under his protection, assuming the garb of a Ṣūfī. When this prince captured Damascus, he took the philosopher with him, and there Fārābi died in A.H. 339 (=A.D. 950).

Fārābī's literary production was considerable, but a great number of his works were lost very early; they were neglected in favour of the works of Avicenna (*q.v.*), which were written in a more lucid and methodical style. They were chiefly commentaries or explanations of the Greek philosophers, especially Aristotle. He wrote an *Introduction to Logic*, a *Concise Logic*, a series of commentaries on the *Isagōgē* of Porphyry, the *Categories*, the *Hermeneia*, the *First* and *Second Analytics*, the *Topics*, *Sophistic*, *Rhetoric*, and *Poetics*. The whole formed an *Organon* divided into nine parts. In the sphere of Moral Philosophy he wrote a commentary on the *Nicomachean Ethics*; in that of Political Philosophy, he made a summary of Plato's *Laws*, and composed a short treatise on the *Ideal City*, which has been published. To Psychology and Metaphysics he contributed numerous works, with such titles as *Intelligence and the Intelligible*, *The Soul*, *The Faculties of the Soul*, *The One and Unity*, *Substance*, *Time*, *The Void*, and *Space and Measure*. He also commented on Alexander of Aphrodisias' book *de Anima*. Believing (according to the view of the Musalmān 'philosophers' properly so called, *i.e.* those who gave themselves out as disciples of the Greeks, and for whom the Arabs reserve the title *failāsūf*, 'philosopher') that Greek philosophy was a unity, he laboured to reconcile Plato and Aristotle, and with this idea wrote treatises on *The Aims of Plato and Aristotle*, and *The Agreement between Plato and Aristotle*—works which are known to us. He also discussed certain interpretations of Aristotle proposed by Galen and John Philoponus, and composed an *Intervention between Aristotle and Galen*.

In the sphere of science, Fārābi wrote commentaries on Aristotle's *Physics*, *Meteorology*, *The Heavens*, and *The Universe*, besides commenting on the *Almagest* of Ptolemy. To him also is due an essay explaining some difficult propositions from the *Elements* of Euclid. The occult sciences interested him, and he left writings on *Alchemy*, *Geomancy*, *Genii*, and *Dreams*.

This great philosopher was also a talented musician—a somewhat exceptional combination. In this sphere he was at the same time composer, virtuoso, and theorist. Some songs attributed to him still exist among the Maulavī dervishes (dancing dervishes), and it is to him that we owe the most explicit work on the theory of Oriental music. His musical talent excited the admiration of Saif ad-Daulah.

Fārābi's style is somewhat peculiar. It generally takes the form of aphorisms, short sentences which always appear condensed and profound, but sometimes become obscure by failing to maintain a methodical sequence. Fārābi is indeed a difficult author, and it is not safe to be dogmatic when attempting to interpret the details of his system. In the main body of his teaching he belongs to the so-called 'school of Philosophers,' *i.e.* to the school which represented the Neo-Platonic tradition in his time; his position in this school is between al-Kindi (older than Fārābi, though not so well known) and Avicenna (a younger philosopher, who is very lucid and easy to study). Following Kindi, he prepares the way for the theory that we find explicitly formulated in Avicenna. His system, or at least his style of thought, is, however, more mystical than that of Avicenna. Mystical ideas and terms appear nearly all through his writings, and seem to colour his whole doctrine, whereas Avicenna treats mysticism as a sort of supplementary chapter or a climax, quite distinct and separate from the rest of his system. The Orientals called Fārābi the 'second master,' Aristotle being the 'first.' In giving this title to the Muslim thinker, it was especially his importance as a logician that they had in view.

2. Doctrines.—It is possible, by making a methodical arrangement of his sentences, to disentangle the principal theses of Fārābi's doctrine and present them in a coherent form. This has been done by M. Horten in an important work (see Lit. below) devoted to this philosopher and his commentator Ismā'īl al-Fārānī (pp. 486–491). It is easier to recognize, under his arrangement, the teaching of Oriental scholasticism. The chief subjects of discussion are as follows. (*a*) In Logic: cognition, conceived as a resemblance of objects; perception, a means of cognition; representation, the first stage of cognition; the concept, assimilation and union with the object; abstraction; the predicates; substance and being; the qualities of bodies and the accidents; causality and the relations in the physical world. (*b*) In Psychology: the principle of life, breath; the faculties and their objects; vegetative force; animal force or animal soul, capable of desire, fear, anger; the external senses; the internal senses; common sense (in the

scholastic meaning of the term) and memory; imagination, cogitation, instinct; human intelligence, with its logical faculties, the passive intellect and the active intellect which receives illumination from God. (*c*) In Metaphysics: being, the source of being, non-being; the proofs of God's existence; the necessary and the contingent; the possible; potentiality and action; species and individual; substance and accident, causality; God, the origin of causes; the chain of causes; the principle of causality — that every effect produced upon an object otherwise than by its nature comes from a cause exterior to it. (*d*) In Theology: God existing by His very nature, proved by the causal series, and by the consideration of multiplicity and unity; comprising all creatures; being at the same time unity, truth, love, and light (as in Plotinus), pure being and the source of being, endowed with an interior activity and a personal life; knowing Himself and knowing the world, but always maintaining His unity; the cause in a certain way of free actions in man; both visible and invisible; knowable by man as cause, and through ecstasy or revelation. (*e*) In Cosmology: the first being sprung from God, Divine knowledge and power, the world of Ideas, of knowledge, of abstraction; the second being sprung from God, the 'Commandment' or Word (λόγος, Arab. *amr*); the celestial spheres and the sublunary world. (*f*) In Ethics: happiness, the end of life, attained by union with God, the return of all things to God.

The following passages are taken from the treatise *Gems of Wisdom*, and will give an idea of the philosopher's style. This work, consisting of 58 articles in very brief form, was much admired and extensively used in the schools; it has been edited by Dieterici and translated by Horten.

There are two worlds: the world of created things—our world—and the world of unseen, invisible things, which is the celestial kingdom and the region of Ideas. The latter is also called the world of the 'Commandment'; the 'Commandment' is the eternal will in relation to created things with their perfections. Fārābi further distinguishes the 'Commandment' (*amr*) from the Spirit (*rūḥ*); we may take *amr* as corresponding to the *Logos*, or Word, of the Neo-Platonists, while the Spirit corresponds to the *Psyche*.

How does the multiplicity that is in evidence in the world arise from a God who is Unity? By a sort of intermediary hypostasis between the absolute One and the world:

'You regard Unity, and it is Power; you regard Power, and it becomes second knowledge, which includes within itself multiplicity,' for the first knowledge of God can know nothing but the One. 'There is the horizon of the world of Sovereignty —the purely Divine world—which is followed by the world of the Commandment where the reed-pen runs along the tablet.' This refers to the tablet on which, according to Qur'ānic eschatology, the deeds of men are inscribed. 'Unity becomes multiplicity at the point where the shadow of the heavenly Lotus falls,' the Lotus which shades the Muslim Paradises, 'and where the Spirit and the Word are projected,' the eternal Word of God inspired by the Spirit and preserved in the Qur'ān. 'There is the horizon of the world of the Commandment, followed by the Tabernacle and the Throne,' the seat of God and envelope of the world, 'then the heavens and all that they contain. Every creature sings the praises of God; the heavens revolve according to the principle,' according to the impulse given by the creator, 'and there is the world of the Creation, whence one comes back to the world of the Commandment, by which all once more become one.'

'When you regard the world of the Creation, you perceive the nature of what is created; when you regard the world of pure Being, you know that there must be something existing by his essence.' 'If you know truth first, you also know its opposite; but if you regard error first,' *i.e.* the contingent world, 'you know error, but you know not truth, inasmuch as it is the reality beyond the contingent. Turn your eyes then to the true Essence; and so you will not love the stars which suffer eclipse'; this is an allusion to a passage of the Qur'ān (vi. 76), 'but will turn your eyes towards the face of Him whose face, and none other, is eternal.'

God, conceived as supreme Unity, is also thought of as necessary Being, existing by itself.

'Necessary Being has neither form nor kind nor difference . . . it is the principle whence all else flows.' God is at the same time interior and exterior, manifest and hidden; this manner of speech is usual in Ṣūfiism: 'God is exterior by His essence, and in virtue of being exterior He is interior'; *i.e.* the brightness when He appears is so great that it blinds, and the Divine unity is thus invisible. 'Everything that is seen is seen by means of Him,' *i.e.* everything is visible in Him, as objects in the light of the sun.

God has a two-fold manifestation: first, the manifestation of unity; He shows Himself as unity either to the human intelligence, which seeks after the absolute, or to the heart by means of mystical illumination. His second manifestation takes place by means of signs, which are the wonderful creations scattered throughout the world. 'This second manifestation is connected with multiplicity, and proceeds from the first manifestation, which is that of unity.'

Does God know the world? According to Aristotle, God can have only an abstract knowledge of things. Fārābi does not agree with this view. According to him, God knows things in their causes, and this kind of knowledge does not lead to any change in His being, because the causes, viz. Ideas, are eternal. Moreover, His knowledge is active, and becomes confused with His power to create; it does not, as with us, result in the impression made upon Him by the objects:

'We cannot say that the First Truth comprehends the things that spring from His decree from the fact of these things themselves, as things of sense are perceived by the fact of their presence and the impression they make on us. . . . It comprehends things by its essence; for, when it regards its essence, it sees the lofty power therein, and in the power it sees what is decreed; it sees all, then, and the knowledge it has of its essence is the cause of the knowledge it has of all other things.'

This theory is dangerous for free will; for, if God knows all the details of the world's life as consequences of His power and His decree, there is not much room left for liberty.

The creation is not conceived as an action analogous to human actions, which would be accompanied by desire and effort; it is merely the immediate expression of the Divine thought. As soon as God imagines a thing to Himself, the existence of that thing follows. According to this conception of the act of creation, it seems absolutely necessary to admit that creation is eternal; for God's thought of the world must have been eternal, and He did not require to wait until a need or a desire brought it to realization; the world must then have flowed from His thought at all times. This conclusion, however, is not so inevitable as one might think: the Oriental scholastics, like all the ancients, did not have quite the same conception of time as we have. For them time began when the world was set in motion, and was measured by the number of revolutions performed by the heavenly spheres. Before the movement of the spheres there was no time, but only a sort of fixed duration not susceptible of measurement. The Creator is therefore placed outside of time; and produces it all at once along with the world. Similarly, according to the Oriental conception of the Middle Ages, mensurable space did not extend beyond the limited sphere of the world.

On the idea of substance, Fārābi expresses interesting but contradictory views. He applies the term to both individuals and species. Species and genera, though real substance, require individuals to actualize them. They become actualized and individualized gradually with the passage from the general to the particular. Material substance is the cause of bodies; bodies are the cause of plants; plants, of animals; animals, of man; and man in general is the cause of the human individual. In a short treatise called *Epistle of the Second Master in Reply to Questions put to him*, Fārābi explains his view as follows:

'How, it is asked, are we to conceive the order of substances which are supported by one another? The first substances are

the individuals; nothing else is necessary to their existence. The second substances are species and genera, which in order to be (in action) must have individuals. Individuals, in this sense, are therefore anterior in substantiality, and have more right to the name of substance than have species. But, from another point of view, universals, as being fixed, permanent, subsisting, have more right to the name substance than perishable individuals.' 'Universals,' Fārābi says again, 'do not exist in action; they exist only by individuals, and their existence is then accidental—which does not mean that universals are accidents, but that their existence in action can take place only by accident.'

Munk, in his art. on Fārābi in the *Dict. des sciences philos.*, says that the philosopher Ibn Ṭufail tried to accuse Fārābi of denying the immortality of the soul. But this accusation lacks support. Fārābi's doctrine on this point is the same as that of the philosophic school: the soul, on accomplishing the end of its destiny, must enter into communication with the intellect at work (the philosophical form of the doctrine); or it returns to God (the mystic form). But the fact that the soul is destined to become united with God does not necessitate, according to Fārābi, the annihilation of its personality; nor does it follow, from the fact that the human intellect must receive illumination from the world of Ideas, that the human person must lose all idea of particular things. Fārābi's conception of happiness and the other world is similar to that found in the mystic part of Avicenna's works.

There is a curious passage in which Fārābi speaks of bliss in the other world; it is in *The Ideal City*, the work in which he explains that the end of government on earth ought to be to make souls happy in the other world. The souls of the inhabitants of the city assemble, generation after generation, and their happiness increases as they become more numerous:

'The joy of those long dead increases at the arrival of the newly dead, for each soul then comprehends its essence and the essence of the other souls similar to itself; thus the intensity of its feeling grows—just as the skill of the scribe grows with the number of times he practises writing. The addition of souls to souls corresponds, as regards the progress of each soul's happiness, to the scribe's repetition of his work, by means of which he progresses in facility and skill.'

This passage assumes that each soul is endowed with individual feeling and perception in the other world.

Bon CARRA DE VAUX.

FASTING (Introductory and non-Christian).—

1. Purposes and origin.—The purposes of fasting as a religious, magical, or social custom are various. It may be an act of penitence or of propitiation; a preparatory rite before some act of sacramental eating or an initiation; a mourning ceremony; one of a series of purificatory rites; a means of inducing dreams and visions; a method of adding force to magical rites. Its origin has been sought in some of these, and it is not improbable that, as a rite, it may have originated differently in different quarters. But behind all there was first man's frequent periods of enforced fasting through scarcity of or difficulty in obtaining food. His experience of this, as well as of its results, whether on body or on mind, would come in course of time to be used as suggesting the value of voluntary fasting.

Thus, when men wished to obtain vivid dreams, the recollection of the fact that enforced abstinence from food was connected with such dream experiences would suggest recourse to fasting in the hope of obtaining them. Again, when men began to believe that any painful state would be pleasing to, or would propitiate, higher powers, the unpleasant experience of enforced fasting would also point to it as a satisfactory form of suffering. Once more, as a rite of mourning, fasting might originate both from man's incapacity for eating food when seriously distressed—this then tending to become a conventional sign of mourning—and from a real desire to suffer pain on occasions of bereavement. The custom of avoiding certain foods, sometimes because these are regarded as harmful, on certain occasions might readily be extended into a disciplinary practice; or men might resort to extensive and prolonged fasting by way of showing their powers and gaining repute, *e.g.*, among the Algonquin Indians 'to be able to fast long is an enviable distinction' (Tylor, *PC*[3] ii. 411). Finally, as suggested in another article, abstinence might be resorted to in order to lessen the inroads upon the food supply, and this might then come to be regarded as a magical way of increasing the latter, the fasting being now more strictly observed (see AUSTERITIES, § 6). In the lower stages of culture all these various origins and methods may be taken for granted, but it is mainly at higher stages that fasting becomes a strictly ascetic practice of self-mortification and discipline or of propitiation.

Fasting may be complete or partial, and in either case for a longer or shorter period. Sometimes, generally upon magical grounds, though often upon grounds of health, only certain foods are abstained from on particular occasions, but these foods occasionally cover many which are liked by or necessary to the savage at other times. Again, in many instances certain foods are forbidden or tabu to women, or to youths and children; but, while this may be invested with some supernatural sanction, it is probably due to selfish causes.

Among the Ba-Yaka, almost every form of flesh as well as fish is tabu to women, and any breach of the tabu would be visited by supernatural punishment (*JAI* xxxvi. [1906] 41, 51). Among the Wagogo of E. Africa, certain parts of meat—liver, kidneys, heart, etc.—are prohibited in childhood (Cole, *JAI* xxxii. [1902] 317). In New Guinea, young people may not eat certain foods, under pain of certain undesirable things happening to them (Seligmann, *Melanesians of Brit. N.G.*, Cambridge, 1910, pp. 139, 352, 580).

Generally speaking, this is true among most savage tribes with respect to women and to youths before initiation; and, though it does not necessarily amount to fasting, it points to abstinence from certain desirable foods, this abstinence being generally enforced by tribal customary law or by the power of fear. Thus, fasting or abstinence, more or less complete, may be regarded as a well-nigh universal practice among lower races at certain times. To this there are exceptions; thus Beardmore asserts of the natives of Mowat, New Guinea, that they never fast (*JAI* xix. [1889–90] 462), but these exceptions are very occasional. The attitude of higher races and religions to fasting will be considered later.

Probably no single cause can be alleged as the origin of the practice of fasting.

W. R. Smith explains it as 'primarily nothing more than a preparation for the sacramental eating of holy flesh' (*Rel. Sem.*[2], 1894, p. 434); Tylor, as a 'means of producing ecstasy and other morbid exaltation for religious ends' (*PC*[3] ii. 410; cf. Wundt, *Völkerpsychol.*, Leipzig, 1904 f., ii. 3, 153 f.). Herbert Spencer suggests that the sacrifice of food to the dead causes a lack of food and so produces hunger, and that fasting arises as a necessary result of such sacrifice (*Principles of Sociology*, 1876, i. 285).

The complex nature of its origin is amply vindicated when the various occasions of fasting, among both savage and higher races, are considered. But in no case should it be thought that fasting as a strictly penitential discipline is of early occurrence. That belongs to a later stage of thought, and it is by no means accepted among all higher religions.

2. Fasting or abstinence at certain stages of life.—As a result of the idea that food has a direct influence upon existence, each kind having its own peculiar effect, it is a wide-spread practice for the mother, and sometimes also the father (who is also in a magico-sympathetic relation with his unborn offspring), to abstain from certain foods before or after the birth of a child. This aspect of

fasting is a purely magical one, and was probably not of early or immediate occurrence in the history of mankind. Still, it has been so common that it is of importance in any discussion of the principle of fasting. It helps to show how, for certain definite purposes, man is willing to renounce foods which are pleasant and agreeable to him at all ordinary times, in order that he may prevent certain contingent results following upon his indulgence in them.

Among the Melanesians, this method of abstinence is of general occurrence. Thus, among the Koita of New Guinea, a woman during pregnancy must not eat bandicoot, echidna, certain fish, and iguana; and the husband must observe the same food tabus. Among the southern Massim, the mother is restricted for about a month after a birth to a mixture of boiled taro and the fruit of the *okioki*; while the father has also to abstain from many favourite foods. In other districts, similar tabus hold good, and 'every mother observes certain complicated customs of fasting after the birth of each child, especially after the birth of the first-born' (Seligmann, 84, 86, 487, 580 f.). In New Britain, 'no pregnant woman can eat anything which is *tabanot*, *i.e.* which is complete'—shark, arum, etc.—or again, cuttle-fish, which is said to walk backward, lest the child should become a coward (Brown, *Melanesians and Polynesians*, 1910, p. 33). Similarly, Codrington says of other islanders that both father and mother refrain from certain foods before and after a birth (*Melanesians*, Oxford, 1891, p. 228). Pregnant women among the Andaman Islanders must abstain from pork, turtle, honey, iguana, and parodoxurus; while the husband abstains from the two last (Man, *JAI* xii. [1883] 354). Among the Arunta, as among most Australian tribes, a numerous list of forbidden foods applies to the expectant mother, fewer to the husband, the reasons alleged being those of danger to the unborn child, or occasionally to the parents (Spencer-Gillen[b], 614). The husband and wife among the Coroados of S. America must refrain from all flesh foods before a birth (Spix-Martius, *Travels in Brazil*, 1824, ii. 247). The father, among the Xingu and other Indian tribes, must avoid fish flesh, and fruit; and among the Bororó both parents eat nothing for two days after the birth, while among the Paressi the father may taste only water and *beijú* for five days (von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens*, Berlin, 1894, pp. 334 ff., 434, 503). The Carib father must fast for 40 days after a birth, and at the end of that time has to undergo other austerities (Tylor, *Early Hist. of Mankind*, 1865, p. 294). Among the Baganda, there were many food restrictions for the expectant mother, transgression of which resulted, according to popular belief, in injury to the child (Roscoe, *The Baganda*, 1911, pp. 49, 101). As a final example we may take the tribes of Assam, among whom one of the many food *gennas*, or tabus, is that a woman is denied many articles of food lest she should hurt her unborn child (Hodson, *JAI* xxxvi. [1906] 97).

Similar restrictions are generally observed by savage girls at the time of the first menstrual period. Thus, among the tribes of British Columbia, a girl must fast for four days; and also throughout the whole lengthy period of her seclusion she must abstain from fresh meat, because this would harm her, or because the animals which furnish it might take offence (Hill Tout, *JAI* xxxv. [1905] 136). Among the southern Massim, girls were secluded at this period and had to abstain from all flesh food (Seligmann, 498). For fasting before marriage, see AUSTERITIES, vol. ii. p. 230[b]. The same custom was ordained in ancient China in the *Lî Kî*, along with various purifications (*SBE* xxvii. [1885] 78). Food-tabus are also observed during sickness, as among the Wagogo of E. Africa, with whom the medicine-man forbade certain foods (Cole, *JAI* xxxii. [1902] 317), and among the Ten'a of Alaska, where, after a cure, certain forms of abstinence—from hot food and drink, or from certain kinds of food—were imposed temporarily or for life (Jetté, *JRAI* xxxvii. [1907] 172).

In many cases, tabus are placed upon certain foods for a shorter or longer time, generally for practical purposes, the tabu having really the intention of a 'close season.' This may be done by the chief, or by some society, or by general consent (see Brown, 126; Seligmann, 299). But sometimes a religious sanction is given to this tabu, as among the Andaman Islanders, who abstain from certain fruits, edible roots, etc., at certain seasons, because the god Puluga then requires them, and would send a deluge if the tabu were broken (Man, *JAI* xii. 154, 353). These prohibitions correspond to the magical food-tabus which are observed by various peoples, to prevent the qualities of the animal eaten from entering into the eater.

3. Fasting as an act of mourning.—The origin of this rite has been explained on various grounds—as propitiatory of the ghost, as a practice contrary to ordinary actions and so resembling the actions of the land of ghosts which differ from those of this earth (see *ARW* xii. [1909]), as a prevention of the ghost of the dead man from entering the body with food (Frazer, *JAI* xv. [1886] 92), and as a conventional practice arising out of the actual starvation consequent upon the destruction or sacrifice of food-stuffs at a death (H. Spencer, i. 285). Westermarck suggests that the origin may be found in the fear of swallowing food polluted with the contagion of death—the custom of not preparing or eating food in a house where there is a dead body pointing to this (*FL* xviii. [1907] 403). But, while these or other reasons have doubtless assisted the growth of the custom, it is not unlikely that actual grief, making mourners indifferent to the pangs of hunger, may have given rise to fasting as a conventional sign of mourning, other reasons being later assigned to it. The time during which the fast endures varies considerably, and in some places the fast is absolute, while elsewhere only certain foods are abstained from.

In the Andaman Islands, mourners abstain from pork, turtle, and luxuries (Man, 142). Among the tribes of New Guinea, various foods are abstained from, and in some instances a man voluntarily gives up a favourite food for a time. Among the southern Massim, the widow may not eat the kinds of food eaten by her husband in his last illness until after the funeral feasts—with the result that she is often reduced to a state of inanition (Seligmann, 617, and *passim*). In Fiji, fasting is observed during the day from ten to twenty days (Williams, *Fiji*, 1870, i. 169); and, in Aurora, many foods are abstained from, and what is eaten is usually what grows wild in the bush (Codrington, 281), just as in the Solomon Islands the mourners live on coconuts and a few bananas (*JAI* xvii. [1887-8] 96). In Samoa, mourners fasted entirely during the day (Turner, *Nineteen Years in Polynesia*, 1861, p. 228, *Samoa*, 1884, p. 145; Brown, 54). Many African tribes also fast at a death. Among the Yoruba, widows and daughters are shut up and must refuse all food for at least 24 hours (Ellis, *Yoruba-speaking Peoples*, 1894, p. 156). Tribes on the Gold Coast fast with great severity, and for a long period after a death (Waitz, *Anthrop.*, Leipzig, 1872, ii. 194). Among South African tribes, fasting is observed after the death of a relative or of a chief, in the latter case by the whole tribe for a day or longer (Macdonald, *JAI* xix. [1889-90] 280). The American Indian tribes varied in the extent of their fasting as a mourning custom, but the practice was general among them. Thus, in British Columbia, the Stlatlumh (Lillooet) spent four days after the funeral feast in fasting, lamentations, and ceremonial ablutions (Hill Tout, *JAI* xxxv. [1905] 138). In China, fasting was more rigorous in proportion to the nearness of the relationship, and the foods refrained from were mainly those offered in sacrifice to the dead. The *Lî Kî* orders the custom and shows many examples of extreme devotion of this kind. The present ritual prescribes blows with a bamboo for any participation in festive meals during the period of mourning (de Groot, *Rel. of Chinese*, New York, 1910, p. 70, *Rel. System*, Leyden, ii. [1894] 474 ff., 646 ff.). The worship of ancestors was also preceded by fasting and vigil for seven days according to the prescription of the sacred books (*Lî Kî* [*SBE* xxvii. 87, xxviii. 292]; *Shî King* [*ib.* iii. 300, 304]). In Korea, no food is eaten for one day by the family, and for three days by sons and grandsons (Ross, *Hist. of Corea*, Paisley, 1879, p. 322). While fasting was uncommon in ancient Persia, a fast of three nights after a death is ordered in *Shâyast lâ-Shâyast* (xii. 5), and, according to the *Sad Dar Bundahišn*, no fresh meat is to be cooked or eaten (*SBE* v. [1880] 341). In ancient Japan, a vegetable diet of the sparest kind was partaken of by mourners, children observing this for 50 days on the death of a parent (*JAI* xii. 225). In ancient Egypt, fasting was observed by his subjects at the death of a king, no meat, wheaten bread, wine, or any luxury being allowed, nor baths, anointing, or soft beds (Wilkinson, iii. 443). Among the Greeks, the custom was also observed, and Lucian describes the efforts of relatives to induce parents to take food after their two or three days' fast (*de Luctu*, 24). Fasting for the dead was practised by the Hebrews. The men of Jabesh-Gilead fasted for Saul seven days (1 S 31[13], 1 Ch 10[12]); David and his friends fasted until evening on hearing of the death of Saul and Jonathan (2 S 1[12]), and he also fasted until sundown for Abner (2 S 3[35]). In 2 S 12[21] the astonishment of the courtiers that David should fast before, not after, his child's death shows that the custom was a general one.

It should be noticed that as a wide-spread custom a funeral feast follows or, less usually, precedes the fasting at a death (see FEASTING).

In connexion with fasting after a death, it is interesting to notice—as showing that a fear of the contagion of death or of swallowing a revengeful ghost has influenced the practice—that in many instances those who have slain a man must fast, besides undergoing other rites of a purificatory order.

In New Guinea (southern Massim), the killer or captor of a man who was to be eaten would go at once to his house and remain there for a month, living on roast taro and hot coco-nut milk; he did not join in the cannibal feast because he was afraid of the 'blood' of the dead man. Among the Mekeo tribes, the warriors are secluded and must eat but little. Among the Roro-speaking tribes, homicides during their purification must eat little and must not handle their food (Seligmann, 297, 333, 557; cf. also, for the Fijian practice, Thomson, *Fijians*, 1908, p. 98). In the Pelew Islands, young warriors after returning from a fight must eat only coco-nuts and syrup, other food being tabu (Kubary, *Die sozialen Einrichtungen der Pelauer*, Berlin, 1885, p. 131). Similar rules prevailed among many American Indian tribes. Thus, among the Pima, the slayer of an Apache had to fast for sixteen days and to live alone; and among the Natchez young warriors after taking their first scalp had to abstain during six months from all flesh food. If they broke the tabu, the soul of the slain man would kill them (*NR* i. 553; *9 RBEW*, 1892, p. 475 f.; Charlevoix, *Hist. de la Nouvelle France*, Paris, 1744, vi. 186 f.). Similarly, among the Thompson River Indians, those who handled a dead body were secluded, and fasted until it was buried (Teit, *Mem. Amer. Mus. Nat. Hist.* i. [1900] 331).

4. Fasting as a rite of preparation.—As food may convey evil influences into the body, according to savage belief, and as fasting would, in any case, render the body void of impurities, it is often resorted to as a ritual preparation and as a purificatory act.

Thus, before slaying the eagle, a sacred bird, the professional eagle-killer among the Cherokees had to undergo a long vigil of prayer and fasting (Mooney, *19 RBEW*, pt. i., 1900, p. 282). Among the Tlingits, with whom there exists a belief in reincarnation, after a death a girl fasted for eight days, 'unless she were delicate, when half as many sufficed. In the former case she fasted steadily for four days, rested two days, and then fasted for the remaining four,' as a preparation for the spirit incarnating itself through her (Swanton, *26 RBEW*, 1908, p. 429). For similar reasons the Egyptian fasted and performed ablutions before entering a temple (Wiedemann, *Rel. of Ancient Eg.*, 1897, p. 206); and, for the purpose of purity, fasting was resorted to before sacrifice in the cult of Isis (Herod. ii. 40), just as the sorcerer among the Lapps prepares himself by fasting for the offering of a sacrifice (G. von Düben, *Om Lappland och Lapparne*, Stockholm, 1873, p. 256). Hence, before eating new food, the firstfruits of the harvest, etc., fasting is commonly practised, the food possessing a kind of sacramental virtue. Before the yam feast in New Guinea the chief was kept without food for several days (Brown, 413). Among the Cherokees, at the dance at which the new corn was eaten, only those could eat who had prepared for it by fasting, prayer, and purifications (Mooney, 242 ff.); and among the Creeks, at the festival of the firstfruits, those who had not violated the law of marriage or that of the firstfruit offerings during the year were summoned to enter the holy square and observe a strict fast for two nights and a day, purging themselves also with a bitter decoction (Frazer, *GB*[2] ii. 330). Similarly among the Natchez, at the festival of new fire—a harvest-festival—the people fasted for three days and took an emetic, after which the festival began (Chateaubriand, *Voyage en Amérique*, Paris, 1867, p. 130 f.). Thus, before receiving food which is to all intents and purposes sacred, the body must be purified—this being also seen in the use of emetics in connexion with fasting, found among the Masai (Thomson, *Through Masai Land*[2], 1887, p. 430). Among the Baganda the person who drank milk fasted for several hours before eating certain foods tabued in connexion with it, and *vice versa* (Roscoe, 418). The Mexicans, before eating the sacrament of Huitzilopochtli, ate no food for a day, just as modern Jews fast from 10 a.m. before eating the Passover. Among the southern Massim, before the Walaga Feast, certain men of the community who are set apart as 'holy' must fast from boiled food, mango fruit, etc., and a number of women are also subject to the same tabus (Seligmann, 590).

In these cases there is clearly seen the aspect of fasting as 'a preparation for the sacramental eating of holy flesh,' whether we regard this as its origin, as does W. R. Smith (p. 434), or not. Another excellent example of this is found in the Greek Eleusinia. According to the myth, Demeter had been persuaded by Baubo to take food after her nine days' fast. This fast was imitated by the *mystæ* at Eleusis, and it was succeeded by the eating and drinking of sacramental food—sacred cakes of sesame and the *cyceon*. Clement of Alexandria has preserved the formula spoken by the initiated—'I have fasted, I have drunk the cyceon' (*Protrep.* ii. 18). So also in the Mithraic ritual the sacramental repast was preceded by many severe trials, which included prolonged abstinence and other austerities. And generally in the Mithraic religion 'abstinence from certain foods and absolute continence were regarded as praiseworthy' (Cumont, *Mysteries of Mithra*, Chicago, 1903, pp. 141, 160). In other instances fasting is a preparation for festival rejoicing. The third day of the Thesmophoria, called νηστεία, was observed by fasting and mourning. 'At Athens the women fast, seated on the ground' (Plut. *de Is. et Osir.* 69). This also was explained as an imitation of Demeter's mourning. In the Roman cult of Ceres, the ritual of which was very largely Greek, there was introduced in 191 B.C. a fast, the *Jejunium Cereris*, which corresponds to the Attic νηστεία. Similarly in the ritual of the *Mater Magna*, the 24th of March, *Dies Sanguinis*, was a day of fasting and mourning, recalling the grief of the Mother for Attis, and was succeeded next day by the *Hilaria*, a great day of festival rejoicing. The *taurobolium* sometimes took place on the *Dies Sanguinis*. Though these fastings are connected with mythic events, they are in origin preparatory, purificatory acts for festal rejoicing. We may compare with them the three days' fast which preceded the great Peruvian festival of Raymi, at the summer solstice (Prescott, *Hist. of Conquest of Peru*, 1890, p. 50).

5. Fasting at initiation.—This, along with the whole complex ritual of initiation to manhood and its privileges, may also be regarded as a preparation for the latter and for the reception either of foods hitherto tabued to the boy or of knowledge until now withheld from him.

Among the tribes of N.S. Wales, boys at the *bora* ceremonies are kept for two days without food, and receive only a little water (Palmer, *JAI* xiii. [1884] 295). The list of foods forbidden to the novices until initiation is complete is a very large one in many of the Australian tribes (Howitt, *ib.* 455, xiv. [1885] 316; Spencer-Gillen[b], p. 612 f.). In these instances the object of the restrictions appears to be that 'of confining the best food to the older men and at the same time inculcating upon the youths the habit of strict obedience.' Such food restrictions are also found in the Andaman Islands, where, as a test of self-denial, until the tabus are removed at initiations (or, in the case of girls, at marriage), young people must not touch certain favourite articles of food for months or years—turtle, pork, fish, honey, etc. (Man, 94, 129). In the Banks Island, at initiation to the secret societies or clubs, a period of fasting has to be undergone. In the New Hebrides the novices at initiation are kept in an enclosed place and given very little food or water, sometimes for 30 days. Great suffering is often involved (Codrington, 80, 87, 93, 107). Among the western tribes of Torres Straits, lads had to abstain from all animal food at the period of initiation (Haddon, *JAI* xix. 309). In New Guinea similar customs are found. Among the Roro-speaking tribes many foods are forbidden to boys at puberty while they are making their ceremonial drums in the forest. Fasting for a day at the end of the seclusion period was usual among some of these tribes. Among the southern Massim, many foods are forbidden to the novices, the abstinence being of a ceremonial character (Seligmann, 258, 261, 496 f.).

Corresponding to these initiatory forms of abstinence are the prolonged fastings and other austerities which the American Indian youth undergoes in seclusion at puberty, in order that by means of a vision he may see the guardian spirit which will be his for the remainder of his life. Here also fasting is a preparatory act, and is generally combined with the purificatory use of strong emetics, and of ablutions, although there is a physiological connexion between the fasting and the visions which are induced in the brain of the youth weakened by hunger and worked up to a pitch of excitement. This connexion has probably been discovered for himself by the savage. This form of fasting is found among all the American Indian tribes, whether of higher or of lower culture, and, in many of the instances recorded, the discipline, whether self-imposed or not, is of a most rigorous kind. A few examples will show this.

Boys among the Musquakie Indians undergo a nine years' training, which becomes steadily more severe. 'The fasts that at first were deprivation from one meal lengthen, till they

stretch over days and nights of abstinence from both food and water.' Finally comes the nine days' fast, during which the lad wanders in the woods, and has feverish dreams, in one of which he learns what his 'medicine' is to be (Owen, *Folk-lore of the Musquakie Indians*, 1904, p. 67 f.). Charlevoix (vi. 67 f.) describes the privations of the young tribesmen among the Algonquins and others: 'They begin by blackening the boy's face, then they cause him to fast for eight days without giving him anything to eat.' This induces dreams which are carefully inquired into. 'Nevertheless the fast often ends before the proper time, as few lads can keep it up so long.' Jones, the Ojibwa Indian, describes his own experience of fasting: 'I well remember, in my early days when I used to blacken my face and fast, in order to obtain the favour of some familiar god, that one day, being thirsty, I took a sip of water. The moment I had done so I remembered I was fasting. The thoughtless act filled me with sorrow, and I wept the greater part of the night.' He never was favoured with a vision, and hence never obtained a *manitou* (*Hist. of the Ojibway Indians*, 1861, p. 87 ff.). The fasting, sometimes for a fortnight, would ordinarily kill a man, but the natives believe that he is kept alive by the *tamanous* or *manitou* (Eells, *18 RSI*, pt. i. 1889, p. 674). For many other instances, see the works of Lafitau, Bancroft, Schoolcraft, etc., and those cited by Frazer, *Totemism and Exogamy*, 1910, iii. 370 ff.; also art. COMMUNION WITH DEITY (American), § 3.

In certain mystery cults of the ancient world, fasting was one of the conditions of initiation. Apuleius describes the thrice-repeated ten days' abstinence from luxurious food, the avoidance of the flesh of animals and of wine—'reverential abstinence'—which the candidates had to observe before being fully initiated into the mysteries of Isis (*Metam.* xi. 23, 28, 30). See also § 4 above.

Similar fastings, with the use of strong emetics, narcotics, flagellations, etc., are undergone in many regions by those who wish to become medicine-men. Here too the act is preparatory to the reception of higher knowledge, but it also tends to induce dreams, which are regarded as a necessary part of the medicine-man's means of obtaining revelations.

The Eskimo youth who wishes to become an *angekok* must retire and fast for some time until he obtains visions, in which the spirits are supposed to visit him (Cranz, *Hist. of Greenland*, 1820, i. 210). Among the Lapps, those who wished to be wizards had to fast strictly (Klemm, *Culturgesch.*, Leipzig, 1843–52, iii. 85). In Brazil, the youth who desires to be a *pajé* dwells alone and fasts over a period of two years, after which he is admitted as a *pajé* (Martius, *Von dem Rechtszustande unter d. ur. Bras.*, Munich, 1832, p. 80). Among the Abipones, the postulant for the position of *keebit* had to sit on a tree overhanging a lake for some days, fasting, until he began to see into futurity (Dobrizhoffer, *Abipones*, 1822, ii. 68). Similar methods obtained among the N. American tribes for becoming a medicine-man. These included very severe and prolonged fastings, followed by vivid dreams. So also, among the Zulus, diviners become qualified for their work and for intercourse with spirits by a severe discipline which extends over a protracted period and includes a very rigorous fasting. Thus the youth becomes 'a house of dreams' (Callaway, *Rel. System of the Amazulu*, 1884, p. 387).

This connexion between fasting and other disciplinary methods, and dreams, visions, or revelations, is well established everywhere. Hence also, in order to induce such dreams or to receive communications from supernatural or higher powers, fasting has been very commonly resorted to both among savages and among more advanced peoples, as well as in higher forms of religion. Among the American Indians, with whom fasting as a preparation for the acquiring of a guardian spirit and for becoming a medicine-man occupied so important a place, it is very commonly resorted to as an ordinary means of acquiring hidden knowledge or messages from the spirits in dreams. The hunter fasts until he dreams whether his hunt will be successful or not; the husband fasts until he dreams whether his hopes of becoming a parent will or will not be gratified. The greater the power of fasting, and the more vivid and numerous the consequent dreams, the more was the seer held in reverence and the greater power did he acquire. Even the Great Spirit might appear as a handsome youth to him who had undergone almost superhuman fasts—a vision believed to be of peculiar efficacy. And as a preparation for the state of ecstasy in which the spirits speak through the medicine-man, he fasts much and often and undergoes other austerities (see Schoolcraft, *Indian Tribes*, Philadelphia, 1852, *passim*; *Relation des Jésuites*, 1672, p. 38; Matthews, *Ethnog. and Philol. of Hidatsa Ind.*, Washington, 1877, p. 51; Warren, *Hist. of the Ojibway Nation*, St. Paul, Minn. 1885, p. 64; Dunn, *Hist. of the Oregon Territory*, 1844, p. 253 ff.).

The Zulu diviners also make use of fastings lasting over several days, in order to have visions. For, as their proverb runs, 'The continually stuffed body cannot see secret things,' which agrees with Galen's saying that dreams produced by fasting are clearer than others (Callaway, 387; Grout, *Zulu-land*, 1864, p. 158). The Santal priest also fasts for several days; the result is a wild ecstatic state in which he utters oracles by the power of the god possessing him (H. Spencer, i. 257). The Chinese custom of fasting before a sacrifice to the ancestral spirits may have had the intention of causing communion with them through visions, as the person had at the same time to fill his mind with thoughts of them (*SBE* iii. 304, xxviii. 292). In one of the texts of Taoism a mechanic is described as fasting in order to become of concentrated mind, and after several days he has forgotten all about himself; in other words, he is now fit for Divine revelations (*SBE* xl. [1891] 209). Such fastings were not unknown in the mystic aspects of Greek religion. At the grotto of Acharaca, the vapours of which had a medical virtue, and which was therefore the seat of an oracle, the sick remained several days without food, and the fast was used to aid visions in this place of inspiration (Strabo, xiv. p. 650). Those who consulted the oracle of Amphiaraus abstained from wine for three days and from food on the day of sleeping in the temple (Philostr. *Vita Apol. Tyan.* i. 37). The Pythia, in addition to chewing laurel, drinking the sacred water, and inhaling the vapours of the chasm, fasted as a preparation for her inspiration.

This purpose of fasting was also recognized by the Hebrews, to judge by certain references to it in connexion with revelations, or visions, or communications from God. For these there was preparation by fasting as well as by other methods. Thus, while Moses was with Jahweh on the Mount and received the Law, he fasted forty days and forty nights (Ex 34[28], cf. Dt 9[9]). Daniel, also, before his communion with God and the visions which he experiences, fasts, in one case eating 'no pleasant bread,' flesh, or wine for three months (Dn 9[3] 10[2, 3]). It is also noticeable that Elijah's revelation on Mt. Horeb comes after he has gone in the strength of the food provided by the angel forty days and forty nights (1 K 19[8ff.]). Later Jewish writers define a necromancer as one who fasts and lodges among tombs in order that the evil spirit may come upon him (H. Spencer, i. 261). This purpose of fasting also passed over to Christian custom (see FASTING [Christian], and cf. Tertullian's opinion that fasting gives rise to dreams [*de Anima*, 38], and Chrysostom's saying that it makes the soul brighter and provides it with wings to mount and soar [*in cap. i. Gen.*, hom. 10]).

6. Fasting in magical ritual.—Here also the power of fasting as a preparation for sacred or ritual actions may be seen. The man who fasts makes his magical act more likely to succeed by his being in a purer state of body for it.

In Banks Island, fasting adds power to the charms used for causing the death of an enemy, and so long would a man fast that, when the day arrived on which he was to use the charm, he was too weak to walk (Codrington, 205 f.). Among the Roro-speaking tribes of New Guinea, a sorcerer who wishes to obtain a magical snake-stone fasts for two weeks, eating merely a few roasted bananas. Then he dreams of the locality of the snake and sets off in pursuit. Before a hunt, the hunt is ritually imitated, and this is itself preceded by abstinence from many customary foods (Seligmann, 282, 292). Among the Motumotu tribe, those who remain at home must abstain from eating certain foods, else the expedition might fail (Chalmers, *JAI* xxvii. [1898] 333). Maori sorcerers, using magic with a victim's hair to cause his death, remained fasting for three days. During war all those at home had to fast strictly while the warriors were in the field, the magical effects acting through the sympathetic connexion of the two. Before setting out on an expedition no food was cooked on the previous day until the priest had gone through his divinatory rites (*Old New Zealand*, by a Pakeha Maori, 1884, p. 114; Tregear, *JAI* xix. 108). In Java, the rain-doctor observes a fast as part of the ritual for the prevention of rain (Batten, *Glimpses of the E. Archip.*, Singapore, 1894, p. 68 f.). Among the Santals, on the other hand, those who visit a sacred hill to beseech the god for rain must go there fasting (Dalton, *TES*, new series, vi. [1868] 35). Among the Natchez, also, wizards fasted and danced, with pipes of water in their mouths, when rain was wanted (*Lettres édifiantes et curieuses*, Paris, 1780–87, vii. 29 f.). Similarly the body of rain-priests among the Zuñis have the special duty of fasting and praying for rain (Stevenson, *23 RBEW*

1904, *passim*). The Haida Indian fasts in order to obtain a fair wind; indeed, of these and other tribes it is true that, 'whether a man were a shaman or not, he could increase his physical power, or obtain property, success in hunting, fishing, war, etc., by rigid abstinence from food and drink, by remaining away from his wife, bathing in the sea, taking sweat-baths, etc. He would drink warmed salt water often, and take fresh water afterwards, when all the contents of his stomach were ejected, leaving him so much the "cleaner"' (Swanton, *Contrib. to the Ethnol. of the Haidas*, 1905, p. 40). In Alaska the wife must remain at home fasting, while her husband is out fishing, in order that he may have a good catch (Holmberg, *Acta Soc. Scientiarum Fennicæ*, iv. [1856] 392). Among the ancient Celts, magical herbs were gathered with a due ritual and after fasting (Pliny, *HN* xxiv. 11). For the Celtic custom of 'fasting against' a person, see *ERE* ii. 231[a].

7. Fasting as an act of penitence.—While some of the methods of fasting discussed above may have had a penitential aspect, especially those connected with initiation to mysteries, they were not penitential in origin. Rather does fasting as an act of penitence form a development from them. The person who fasts suffers inconvenience or pain, and he may well have come to think that by so suffering he would humiliate himself before higher powers whom he believed to be angry with him, and would thus gain their pity. At the same time, his suffering was a self-inflicted punishment for sin, which might have the effect of warding off other or further punishments inflicted *ab extra*. As a penitential act, fasting is invariably combined with prayer. The relation between fasting as a penitential act and fasting as a more or less magical method of forcing the hand of the gods is perhaps to be seen at lower levels of culture.

The Tsimshians think they can force the deity to perform their wishes by strict fasting. Hence they lie in bed for seven days without food, observing also continence (Boas, in Frazer, *Totemism*, iii. 317). When the Indians of Colombia wished to obtain the help of their divinities, they fasted and observed continence for several days (Ternaux-Compans, *Essai sur l'anc. Cundinamarça*, Paris, 1842, p. 44 f.). Here there is no penitence, but it is easy to see how such fastings might become penitential if it were the forgiveness of the deity which was sought. Among the ancient Mexicans, fasting as a penitential act existed, and was intended to assist in purifying the conscience. These fasts varied much in extent,—from one day to several years,—and they were observed either by individuals or by the whole nation on particular occasions, and were usually imposed by the priests after due confession of sins or for specific offences. The high priest fasted and prayed, practising also severe austerities in seclusion, for months at a time, on occasions of public calamity (Clavigero, *Hist. of Mexico*, 1780, i. 397 ff.; Torquemada, *Monarchia Indiana*, Madrid, 1723, ii. 212 f.).

In Egypt, fasting as a method of expiation for sin, either occasional or at fixed times, was recognized. All luxuries had to be abstained from, as well as every form of gratification of the passions. It has been thought that fasting is alluded to in the 'negative confession' (Wilkinson, iii. 396). As many of the Babylonian penitential psalms show, fasting had become a regular ritual act of penance, accompanying these mournful expressions of wrongdoing. The penitent describes how he has neither eaten food nor drunk clear water. But there were also days of fasting appointed in periods of distress and calamity when the people gave themselves up to strenuous fasting and other acts of penitence (Zimmern, *Bab. Busspsalmen*, Leipzig, 1885, p. 34; Maspero, *Dawn of Civ.*, London, 1894, p. 682; Jastrow, *Rel. of Bab.*, Boston, 1898, pp. 320, 688). The latter practice is well exemplified by the Assyrian fasting described in the Book of Jonah, when the whole people (as well as the animals) were covered with sackcloth, wept and fasted, and prayed to God for forgiveness ($3^{5ff.}$).

Among the Hebrews, fasting as a form of penitence was well known from comparatively early times. Originating as a means of exciting the Divine compassion, it came to have a more ethical colouring, and was the outward expression of a real inward penitence. At the same time there was a contrary tendency for the practice to be resorted to in a conventional manner whenever calamity threatened, and as a mere means of keeping it off—a view against which the prophets vainly protested. Individuals fasted on account of their sins or for some special object (1 K 21^{27}, Ezr 10^{6}). On various occasions a general fast was proclaimed as a recognition of sin—the occasion of any public calamity being a proof that the people had sinned (1 S 14^{24}, 2 Ch 20^{3}, 1 K $21^{9f.}$, Jer 36^{9}, Jl $1^{13f.}$). Or it may have been resorted to spontaneously (Jg 20^{26}, Neh 9^{1}). Fasting, if the accompaniment of a due penitential state of heart and the token of humility, was certainly approved by the prophets and regarded as agreeable to God, the reverse being abhorrent to Him and them (Jl 2^{12}, Is 58^{3-6}, Zec 7^{5}; cf. Jer 14^{12}). Days of public fasting might take place on the occasion of any calamity, *e.g.* the lack of autumn rains; but fixed times of fasting are also found. Of these the most significant is that of the Day of Atonement (Lv $16^{29f.}$), whether its origin is to be sought before or after the Exile. On the 10th day of the 7th month the people were to 'afflict their souls.' This may be the fast referred to in Neh 9^{1} as taking place on the 24th day of the month. Four yearly fasts, in the 4th, 5th, 7th, and 10th months, are mentioned in Zec 8^{19} (cf. 7^{5}). These had reference to events in the Chaldæan conquest of Jerusalem. Another fast-day of later origin was that of the 13th of Adar, supposed to commemorate the fast of Esther and her maidens and the fast of the people commanded by her (Est 4^{16}). It immediately preceded the Feast of Purim, and may have been of Bab. origin (see Frazer, *GB*[2] iii. 176; Zimmern, *ZATW* xi. [1891] 157 ff.). Private fasting was also much multiplied during and after the Exile, strict Jews fasting on the 2nd and 5th days of each week in the year (cf. Lk 18^{12}; *Didache*, 8; *Ta'anith*, 12*a*). These were also the days adopted for special public fastings. Such fasting was done as openly as possible,—a sign of its non-spiritual nature,—and this was rebuked by our Lord (Mt $6^{16ff.}$). At such times it varied in intensity, according as food was taken at the end of 12 or of 24 hours, and according to the omission of various usual actions. Private persons no doubt added to these occasions of fasting, taking no wine or flesh or pleasant food for many days or even over a period of years, as a sign of mourning for sin or as a help to living chastely. This is reflected in the Apocryphal and other writings (Jth $8^{4f.}$; *Test. xii. Patr.* [Reub. 1^{10}, Sim. 3^{4}, Jud. 15^{4}, Issach. 7^{3}, Jos. 3^{4} 9^{2}]). Indeed, so characteristic did fasting as a Jewish custom become that Augustus boasted that he had fasted more earnestly than a Jew (Tac. *Hist.* v. 4).

In Muhammadanism, the principle of penitential fasting is recognized and highly commended by Muhammad himself. The Qur'ān recommends fasting as a penance, for three days on a pilgrimage, and for seven on returning (ii. 193). The believer who kills another believer and cannot find the blood-money must fast for two months as a penance (iv. 94), and the oath-breaker who cannot as a penance feed ten poor men must fast for three days (v. 91). Fasting is often referred to as a good work, and it is one of the recognized duties of the Muslim. Hence there are many stated times of fasting, some of which are obligatory, and others may be regarded as works of supererogation undertaken by the devout. Chief amongst the former class is the fast of the 30 days of Ramaḍān, rigorous and

strictly observed, in which no water is allowed between dawn and sunset, and from which only the sick and infirm, travellers, idiots, and young children are exempt (ii. 180 ff.). Devout Muslims seclude themselves in the mosques, and those who observe this fast receive pardon of all past venial sins (*Mishkāt*, vii. 7. pt. 1). It is followed by a great festival of rejoicing, to which it may be regarded as in some sense preparatory. The 13th, 14th, and 15th days of each month are also generally observed as fasting days, also the day *Ashūrā*, the 10th of the month Muḥarram, because Muhammad said he hoped it would cover the sins of the coming year. Strict Muslims fast also on the Monday and Thursday of each week. While Muhammadanism is not an ascetic religion, the value of fasting as a discipline or a good work is clearly recognized, and it is said that 'the very smell of the mouth of a keeper of a fast is more agreeable to God than the smell of musk' (Hughes, *DI*[2], 125).

While the idea of the Ramaḍān fast may have been derived from the Christian fast of Lent, it is perhaps more closely connected with the Harranian 30 days' fast, in which all food and drink were avoided between dawn and sunset. This fast was in honour of the moon, but the Harranians also observed a 7 days' fast for the sun, and a 9 days' fast in honour of 'the Lord of good luck,' in the former abstaining from fat and wine (Chwolsohn, *Die Ssabier*, St. Petersburg, 1856, ii. 71 f., 226; Jacob, *VI. Jahresber. der geogr. Gesell. zu Greifswald*, i. [1893–6] 5 ff.).

8. Fasting as an ascetic practice.—Most of the examples of fasting already cited are non-ascetic, that is to say, for whatever purpose they are undergone, they occur in religions in which a dualism between body and soul—the former evil, the latter pure—is not recognized, although, in some of the religions referred to, this dualistic view came to prevail amongst individuals or sects. But, wherever asceticism, based on this view, is found, fasting is a more or less recognized ascetic practice, since by observing it the evil body is not pampered by excess in food or drink. Fasting as a penitential practice would easily pass over into an ascetic practice. It is true that, even where the strictly dualistic view does not prevail, fasting may be practised in order to combat the grosser desires of the body, or by way of preparing it for some sacred occasion. This view has already been found in considering fasting as a preparatory act, and in certain instances it very closely approaches strictly ascetic fasting. This is also true of cases where certain foods are avoided as too luxurious—a conception perhaps originally based upon earlier food-tabus.

Thus Plutarch says that the Egyptian priests (of Isis) committed no excess in eating or drinking, and that, while on the 1st day of the 9th month the people feasted on fish, the priests abstained from it, one reason being that it was 'an unnecessary and over-luxurious article of diet.' For a similar reason they abstained from garlic (*de Is. et Osir.* 5 ff.). Abstinence from luxurious food, flesh, and wine was necessary for him who was initiated into the mysteries of Isis (Apuleius, *Metam.* xi.). The Orphic prohibition of animal food was based on the fact that it was used in sacrifice to the dead, though it became an ascetic practice (on this aspect of abstinence generally, see Porphyry, *de Abst. ab Esu Animalium*).

In Greece, where the native religion was opposed to the idea of the acceptableness to the gods of a maceration of the body, this dualistic view leading to a true asceticism is found in Orphism, and here, accordingly, fasting had its place (Diels, 'Ein orphischer Demeterhymnus,' in *Festschr. für Th. Gomperz*, Vienna, 1902, p. 6 f.). Pythagoras also recommended frugality in diet, and commended fasting. Those who went to the temples to pray for some days should not take food all that time—perhaps an example of preparation for Divine revelations rather than of ascetic fasting (Porph. *Vita Pyth.* 34; Iambl. *Vita Pyth.* 27; Diog. Laert. viii. 19). The teaching as to abstinence from all excessive bodily desires, gluttony, drunkenness, etc., is also continued by Plato (*Phædo*, 69–71).

Reference has already been made to the abstemiousness of the Egyptian priests. In the *Maxims of Any* (XIXth dynasty) the same principle is recognized—'Be not greedy to fill thy stomach, for one knows no reason why he should do so' (Petrie, *Rel. and Conscience in Anc. Eg.*, 1898, p. 113). This, however, is not ascetic fasting, but self-control, and generally abundance of good things was an other-world ideal, abnegation in this life not being thought of. Ascetic groups, however, arose in Egypt towards the 4th cent. B.C., perhaps under Indian influences, and at a still later date the Therapeutæ (*q.v.*) are found in large numbers in Egypt. They ate nothing before sunset, and many of them broke their fast once only in three days, or even in six days (Petrie, *Personal Rel. in Egypt*, 1909, pp. 61 f., 70).

Among the later Jews, while fasting was regarded as a meritorious rather than as an ascetic practice, individuals occasionally led strictly ascetic lives, eating as little food as possible. We reach a consistent ascetic view only among the Alexandrian Jews, who held that bodily desires hindered spirituality, and that only through a strict asceticism could the soul be released from their power. Yet Philo did not teach that ascetic practices such as fasting had any value in themselves, though he would have his disciples avoid luxurious excesses.

In Muhammadanism, asceticism was contrary to the Prophet's outlook, but it soon took hold in Islām, and abstinence from various kinds of food, as well as the strict observance of the fasts, was regarded as bringing a man nearer to God. This view was greatly developed in Ṣūfiism (see *ERE* ii. 101 f., 104).

While Buddhism is an ascetic religion and regards the body as evil, Buddha was opposed to excessive ascetic practices of any kind, mainly because excess was evil. Hence, though food was to be taken in moderation as a method of guarding the gateways of the senses, he never advised excessive fasting. One of the ten abstinences is that of eating at forbidden times. Monks must eat but one meal, at mid-day, and nothing after it; they must fast on the days of the new and full moon (a derivative from Brāhmanism), giving themselves also to public confession and hearing of the law. A fast with confession of sins four times a month is now more usual—the *Uposatha* days, which the laity are invited to observe. Köppen says that the Lamaists, on the 14th and 15th, the 29th and 30th days of the month, take nothing but farinaceous food and tea, but the devout refrain from all food until sunset (*Lamaische Hier.*, quoted in Waddell, *Budd. of Tibet*, 1895, p. 501). Another Tibetan ceremony, 'The Continued Fast' (*Nungnas*), lasts for 4 days, of which the first two are preparatory, with confession, prayer, and devout reading, continued till late at night. On the third day there is a strict fast, no one being allowed even to swallow his saliva. Prayer and confession of sins are made in complete silence, and the fast continues till sunrise on the fourth day (Schlagintweit, *Buddhism in Tibet*, 1881, p. 240). The anniversary of Buddha's death on the 15th day of the 4th month is preceded by a five days' abstinence in which even the laity abstain from flesh. This is an example of a preparatory fast, and another example is found in the fast of 24 hours by the priest who conducts the so-called 'Eucharist' of Lamaism (Waddell, 445, 507; cf. p. 501, and see also Monier-Williams, *Buddhism*, 1889, pp. 79, 82, 84, 335; Copleston, *Buddhism*[2], 1908, p. 127). The Mahāyāna Buddhists fast as a means of being re-born into higher grades (*SBE* xlix. pt. 2 [1894] 192 f.).

9. Fasting discredited as a religious rite.—Examples of this, or rather of a mechanical and formal method of fasting, are familiar from the prophetic books (Is 58[4], Jer 14[12], Zec 7[5] etc.). It has

also been seen that Buddha taught moderation rather than excessive fasting. In the *Dhammapada* the fasts of the Brāhmans are discredited as against the moderate Buddhist discipline (*SBE* x. [1881] 21, note), and in another passage fasting and other ascetic practices are said to have no effect in purifying a mortal who has not overcome desire. Of themselves they cannot purify the passions (*SBE* x. 38). The ancient Parsi religion, although fasting occurred sporadically (cf. § 3), despised it. In the *Vendīdād* (iv. 48, *SBE* iv. [1880] 47) it is said that 'he who fills himself with meat is filled with the good spirit more than he who does not do so.' And the *Sad Dar* (83, *SBE* xxiv. [1885] 348) says:

'It is requisite to abstain from the keeping of fasts. For, in our religion, it is not proper that they should not eat every day or anything, because it would be a sin not to do so. With us the keeping of fast is this, that we keep fast from committing sin with our eyes and tongue and ears and hands and feet.' 'That which, in other religions, is fasting owing to not eating is, in our religion, fasting owing to not committing sin.'

While this expresses a valuable truth of spiritual religion, it is perhaps aimed at the excessive fasts of the Manichæans. So, too, in one of the writings of the Taoist Kwang-tze, the question is asked:

'Can the fact that we have drunk no spirituous liquor and eaten none of the proscribed foods, be regarded as a fast?' and the reply runs: 'It is the fasting appropriate to sacrificing, but it is not the fasting of the mind,' explained as a purely spiritual process (*SBE* xxxix. [1891] 208 f.).

10. It should be observed that fasting is usually accompanied by other acts of abstinence, *e.g.* continence, by numerous austerities, and generally, in the higher religions, by prayer. Cf. the common Jewish phrase 'prayer and fasting.'

LITERATURE.—This is referred to throughout the article. See also E. B. Tylor, *PC*[3], London, 1891, ii. 410 f.; E. Westermarck, 'The Principles of Fasting,' *FL* xviii. [1907] 391 ff.

J. A. MACCULLOCH.

FASTING (Christian).—I. *THE FIRST TWO CENTURIES.*—1. New Testament.—Two sayings of our Lord moulded the ideas of early Christianity about fasting: (*a*) that, though His disciples did not fast as the Baptist's disciples did ('often,' Lk 5^{33}), because the Bridegroom was with them, yet the days would come when the Bridegroom should be taken away, and then they should fast 'in that day' (Mk $2^{19f.}$ RV)—a saying which was interpreted literally and led to a particular rule as to the duration of the Paschal fast; and (*b*) that fasting must be unostentatious (Mt $6^{16ff.}$). Although He Himself fasted for 40 days before beginning His ministry, and probably, as a devout Jew, kept the one fast-day that was obligatory at the time,—the Day of Atonement,—He left no regulations for fasting; He gave the principles, and left His Church to make rules for carrying them out. This explains why the Church was so slow in developing a system of fasts and festivals. No rules on the subject could claim to come directly from the Master Himself. It is hardly probable that the first disciples imitated the stricter Jews in voluntarily adding to the Day of Atonement the two weekly fasts (cf. Lk 18^{12}) of Monday and Thursday (days which were chosen because Moses was believed to have gone up to the Mount on the latter and to have come down on the former), for there is no trace of these as Christian fasts in NT. But many Jews increased these fasts voluntarily, as did Anna (Lk 2^{37}), and even the heathen Cornelius, according to some MSS (Ac 10^{30}); and so we read of St. Paul fasting (2 Co 6^5 11^{27}: 'fastings often' the mark of the Christian minister), and of the first Christians fasting before ordinations or solemn appointments (Ac 14^{23} $13^{2f.}$). The Jewish Christians, doubtless, continued to keep the Day of Atonement, and St. Luke mentions it as an epoch (Ac 27^9 'the Fast'), but the Gentiles were almost certainly not pressed to observe it.

2. Second century.—We may now proceed to trace the growth of fasting in the Christian Church, and, in doing so, we must bear in mind the caution that customs varied much, and therefore we must be careful to pay attention to the particular age and country of which our authorities speak, without assuming that, because we find a custom mentioned in one of the older Fathers, it must have been characteristic of the whole Church from the beginning. A broad generalization of Hooker may, however, in the main be accepted. He says that fasts were 'set as ushers of festival days,' and have as their object 'to temper the mind, lest contrary affections coming in place should make it too profuse and dissolute' (*Eccles. Pol.* v. 72, last par.); and the former dictum is true of all but the weekly fasts (below (*c*)). When we review the century and a half that followed the death of St. Paul, we are at once struck by the want of regulations as to fasting; as far as we can gather from the scanty literature before the age of Irenæus, Clement of Alexandria, and Tertullian (end of 2nd cent.), and from the writings of those Fathers, much was left to individual piety. The following facts, however, emerge from the study of this period.

(*a*) There was a general sense of the duty of fasting, and frequent warnings against making it a merely external act. Barnabas (§ 3; *c.* A.D. 100) and Justin Martyr (*Dial.* 15; *c.* A.D. 150) quote Is 58 in this sense; the same warning is given by Clement of Alexandria (*Pæd.* iii. 12, *Strom.* vi. 12). Clement also wrote a separate treatise on fasting (Jerome, *de Vir. Illustr.* 38). Earlier in the century, Polycarp (§ 7; *c.* A.D. 110) urges fasting and prayer as a means of meeting temptation. Hermas (*Sim.* v. 1; written before A.D. 140 [?]) says that he was fasting and keeping a 'station' (a weekly fast) when he saw the Shepherd, who spoke to him of fasting, warning him against the mere external observance: to 'do no evil in your life and to serve the Lord with a pure heart' is the true fast; fasting is very good if the commandments of the Lord be observed.

(*b*) *Paschal fast.*—We hear of this first from Irenæus. He mentions it in his letter to Pope Victor on the Paschal controversy (written *c.* A.D. 195, and quoted by Eusebius, *HE* v. 24), and says that there was great variety in its observance, some fasting for one day, others for two or for several days, others for 'forty hours of night and day,' and that this variety was of long standing; it existed 'long before, in the time of our ancestors.' This shows that the Paschal fast was known early in the 2nd century. The fast of one day and that of forty hours would doubtless be absolute; the latter period would correspond to the time during which our Lord lay in the grave. Tertullian (*de Orat.* 18) says that the 'day of Pascha' (by which he means Good Friday, though the term *Pascha* has other meanings)[1] was a general and, as it were, public fast, on which the kiss of peace was not given. See also below (*e*).

(*c*) *Weekly fasts.*—It was a common custom in the 2nd cent., at least in some countries, to fast on Wednesdays and Fridays; see FESTIVALS AND FASTS [Christian], 1 (*b*).

(*d*) *Pre-baptismal fast.*—This is mentioned in the *Didache* (§ 7 f.); it was for a day or two days, and was observed by the candidate, the baptizer, and others. It is also mentioned in Justin (*Apol.* i. 61) and in Tertullian (*de Bapt.* 20, and perhaps *de Jejun.* 8). As baptism was ordinarily administered at Pascha (Tertull. *de Bapt.* 19, and later writers *passim*), though it might be deferred to 'Pente-

[1] In Christian literature, *Pascha* means Easter Day, or Good Friday, or Maundy Thursday, or Holy Week, or even the forty days before Easter; and similarly *Pentecost* means either the festival itself or the fifty days before it.

cost,' *i.e.* the 50 days after Easter (*ib.*: 'latissimum spatium'), there was a very close connexion between this fast and that before Pascha; and the suspicion may arise that the former is the real rationale of the latter.

(*e*) The feeling of the non-Montanist Christians in the 2nd cent. with regard to fasting is clearly exhibited by Tertullian's abusive treatise, *de Jejuniis*, written *c.* A.D. 210, after he had become a disciple of Montanus; and it is curious that the great development in fasting which took place later was largely due to the rivalry of this sect. The Montanists kept two weeks of 'xerophagy,' *i.e.* partial fasts, in the year; but of these weeks the Saturdays and Sundays were excepted (*de Jejun.* 15). It is not said at what time of the year they were kept. Both the name and the thing were opposed by the 'Psychics' (the ordinary Christians) as a novelty (§ 2). Xerophagies consisted in not eating flesh or anything juicy, not even succulent fruit, or anything with the flavour of wine, and in abstaining from the bath (§ 1). The 'Psychics' objected to the definite *enjoining* of 'stations,' as these should be voluntary (§ 10); yet (Tertullian says) they were inconsistent, as they sometimes lived on bread and water (§ 13) and had definite fast-days, especially 'when the Bridegroom was taken away' [the Paschal fast, see above, I. 1], and Wednesday and Friday up to the ninth hour, or 3 p.m. (§§ 2, 10); they often fasted even on Saturday, which Tertullian says should never be observed as a fast-day except at Pascha (§ 14); their bishops ordained fasts for their own dioceses, and there were fasts before Councils were held (§ 13). The Montanists kept on the bi-weekly fasts to a later hour (§ 10). With this we may compare Hippolytus' accusation against the Montanists, of 'novelties of fasts, and feasts, and meals of parched food and repasts of radishes' (*Hær.* viii. 12 [*c.* A.D. 220]; cf. x. 21, 'novel and strange [read παραδόξους] fasts'). Thus the difference between the Montanists and the Orthodox seems to have been that the latter were less strict in the custom of fasting, and left more to voluntary observance, while the former made a settled practice of compulsory xerophagies and half-fasts in addition to the complete fast of the *Paraskeue* (Good Friday), or of Paraskeue and the following Sabbath. Tertullian's treatise shows how bitter was the feeling excited by a mere difference of observance.

II. *PERIOD OF DEVELOPMENT* (A.D. 200–500).—**1. Development after Tertullian.**—From the 3rd cent. onwards manuals of instruction and worship, now conveniently called 'Church Orders,' became common, basing their injunctions in most cases on supposed Apostolic authority. What before was a matter of voluntary or customary observance now came under rule. Fasting accordingly was more exactly regulated, and the Orthodox became stricter than the Montanists, who retained the fasting customs mentioned by Tertullian till the 5th cent. (Sozomen, *HE* vii. 19). The growth of strictness in fasting is especially observable in the 4th cent., the age of Councils and organization made possible by the cessation of persecution.

2. The Paschal fast was of slow development, and even well on in the 4th cent. we find only the two days before Easter named as fasts in some authorities (Egyp. Ch. Order, 55; Ethiopic Ch. Ord. 41; Verona Fragments, ed. Hauler, Leipzig, 1900, p. 116; *Test. of our Lord*, ii. 18, 20 [all probably to be dated A.D. 300–350]); the fast ends at midnight (*Test.* ii. 12). No other Paschal fast is mentioned in these works, and sick people who cannot fast on both days are allowed to fast on the *Saturday* only (so also *Apost. Const.* v. 18 [*c.* A.D. 375], for which see below). In the above-named Church Orders, or at least in their sources, the Crucifixion and Resurrection were commemorated on the same day. Epiphanius says that the Quartodecimans fasted only one day (*Hær.* l. 1–3; *Exp. Fid.* 22). But a greater development is found in the *Older Didascalia* (v. 14. 18 [probably 3rd cent.]); a partial fast with bread, salt, and water is enjoined from Monday to Thursday of Holy Week, and an absolute fast on Friday and Saturday. Dionysius of Alexandria (*Ep. ad Basilidem*, can. 1 [early 3rd cent.]) mentions a Holy Week fast, during the six days of which some even ate nothing at all; but he testifies to a diversity of usage, some fasting two, some three, some four days, others not even one day. There was also a diversity (he says) as to the time of ending the fast before Pascha [*v.l.* 'Pentecost'; but this seems to be an error]; in Rome they ended it at cockcrow, elsewhere at nightfall. He mentions the Friday and Sabbath (Saturday) as rigorous fasts.

A forty-days' fast is not found till the 4th cent., and made its way only gradually; a supposed reference in Origen (hom. *in Lev.* x. 2) is due to Rufinus' 'translation.' In some countries the 'forty days' were observed as a solemn season for prayer, without being a fast, as Advent was observed in later times in the West; at Nicæa they are merely mentioned as a well-known space of time, before which Synods were held (can. 5); and in the *Test. of our Lord* (*c.* A.D. 350) the people are told to keep vigil and to pray in the church then, but there is no word of fasting (ii. 8). The name of the season was τεσσαρακοστή, 'Quadragesima'; at first this means the 'fortieth day' before Easter, on which the *competentes*, or selected candidates for baptism, were enrolled (Cyr. Jerus. *Cat. Lect.*, Introd. 4); but soon the name was given to the whole season. An exact parallel is to be seen in the name 'Pentecost' (see above, I. 2 (*b*)). The next stage was that the partial fast before Pascha, of varying duration, was called τεσσαρακοστή, irrespective of its exact length. Some moderns suppose that the name first arose from the forty *hours'* fast; others think that it has nothing to do with the fast, but only with the period of probation of the *competentes*, though it is not quite clear why this was forty days. For less probable reasons, see below.

The 'Festal Letters' of Athanasius show that the forty-days' fast did not develop so soon in Egypt as in Rome (cf. also Egyp. Ch. Order above). In the first (A.D. 329) he speaks of the fast beginning on Monday of Holy Week, and implies that the fasts of Moses, Elijah, and Daniel were longer than those of Christians. So in the letters for A.D. 332, 333, Holy Week only is mentioned. In the intervening years, however, he refers to τεσσαρακοστή, but only tentatively; Holy Week is *the* fast, and so in the letter for A.D. 334 ff. In the year 340 (*Ep.* xii.), writing to Serapion of Thmuis from Rome instead of sending a festal letter, he persuades the people to fast all the forty days, as they did in Rome. In 347 (*Ep.* xix.) he says that any one who neglects to observe the fast of forty days cannot celebrate Easter. Two points appear from these Letters: (*a*) Saturday and Sunday were not fast-days (vi. 13; so A.D. 389 at Milan [Ambrose, *de Elia et Jejunio*, 10] and at Antioch [Chrysostom, hom. xi. *in Gen.* 2]); (*b*) the Holy Week fast ended in Egypt late on the evening of Saturday, as in the days of Dionysius (see above). Like so many earlier and later writers, Athanasius warns his people against making the fast an external matter only (i. 4 f.).

The forty-days' fast is also mentioned by Eusebius (*de Pasch.* 5), and in the *Canons of Hippolytus* as we now have them (*c.* A.D. 320 [?]; can. xx. [154]). The latter prescribe bread and salt and water in Holy Week (can. xxii. [195–8]); sick persons and those who neglect the fast by ignorance of the time should fast after Pentecost. The *Edessene Canons* (*c.* A.D. 350 [?]; can. 7) are the first to give as the reason for the forty-days' fast that our Lord and Moses and Elijah fasted for that period; at Edessa the 'forty days' included all or most of Holy Week [so *Test. of our Lord*, which does not make the forty days a fast], and the Passion and Resurrection were apparently commemorated on the same day (see above). Another development is the

prefixing of the forty-days' fast to Holy Week, as in the *Apost. Const.* (v. 13, 18, ed. Funk, *Didascalia et Const. Apost.*, Paderborn, 1905); in Holy Week, bread, salt, herbs, and water only are allowed, and the last two days are an absolute fast *if possible*, or, at any rate, the Saturday (see above; the saving clause is an adaptation of the parallel *Didascalia* passage). Holy Week is pre-eminently 'the week of the fast' (v. 20). Pseudo-Ignatius (*Philipp.* 13), who is perhaps the author of *Apost. Const.*, likewise makes Holy Week separate from the τεσσαρακοστή, as does Chrysostom (hom. xxx. *in Gen.* 1). The *Apostolic Canons*, which at any rate are from the same school, do not mention this point, but make the forty days a fast for all, under penalties (can. 69 [*c.* A.D. 400]). The 'Pilgrimage of Silvia' (or 'of Etheria') describes an eight-weeks' Lent at Jerusalem, with forty-one actual days of fasting (*c.* A.D. 385 [?]).

In the 5th cent. Socrates (*HE* v. 22) says that the Paschal fast varied greatly. At Rome three successive weeks before Easter were kept, except Saturdays and Sundays; but the accuracy of his statement that Saturdays were excepted has been doubted. In Illyria and Greece and Alexandria they fasted six weeks, which were called τεσσαρακοστή. Others began the fast in the 7th week before Pascha, and fasted only for three periods of five days, and that at intervals, and yet called it τεσσαρακοστή—a fact which greatly surprised the historian. The mode of fasting also varied; some abstained from things that had life, others ate fish only, others both fish and fowl; some did not eat eggs and fruit; some ate dry bread only, some not even this; others fasted till the 9th hour and then took any kind of food (this applies to the weekly fasts; see below, 3); there was no written command on the subject.

Sozomen (*HE* vii. 19) gives like evidence. In some Churches the fast was 6 weeks, as in Illyria, the West, Libya, Egypt, Palestine; but 7 weeks in Constantinople and the neighbourhood as far as Phœnicia. In some Churches people fasted 3 alternate weeks during the space of 6 or 7 weeks; in others they fasted continuously for 3 weeks just before Pascha; Montanists fasted only for 2 weeks. Earlier in the 5th cent. John Cassian remarks on the variety of custom with regard to the Lent fast (*Collat.* xxi. 24–30, written *c.* A.D. 420); he says that, though some kept it for 6 weeks and others for 7 weeks, both made only 36 days of fasting [this would depend on whether the Saturdays were fast-days or not]; and the number 36 was a tithe of the year. The 36-days' fast was for all, but some devout persons exceeded the number; the observance of Quadragesima was not primitive, and was not originally enjoined by canonical rule, but was a matter of gradual growth. The name was adopted because our Lord, Moses, and Elijah fasted for 40 days (cf. *Edessene Canons*, above), and for other reasons. The reference of the name to our Lord's fast is also given by Augustine (*de Doct. Christ.* ii. 16 [25]), Ambrose (*Hom.* 21), Gregory of Nazianzus (*Orat.* xl. 30), and Jerome (*in Is.* xvi. 58; *in Jon.* 3). Socrates (*HE* ii. 43) says that Eustathius, the heretical bishop of Sebaste in Armenia, who was condemned by the Synod of Gangra (*c.* A.D. 380), allowed the prescribed fasts to be neglected, and recommended fasting on Sunday (see also the Synodal letter of Gangra, summarized by Hefele, *Councils*, ii. 327, Eng. tr., Edinb. 1871–96).

During Lent, entertainments, horse-racing, and similar shows were forbidden (see *DCA* ii. 975). The Council of Laodicæa (can. 51 [*c.* A.D. 380]) prohibited the keeping of the festivals of martyrs in Lent except on Saturday and Sunday; so (A.D. 692) the second Trullan Council (can. 52). Among those who wrote on fasting during this period of development were James of Nisibis († *c.* 350) and Maximus of Turin († *c.* 470), both mentioned by Gennadius (*de Vir. Illustr.* i. 41); Maximus wrote on the Quadragesimal Fast, and also on fasting in general, and 'that there should be no jesting on a fast day.' Many sermons on fasting are extant, by Augustine, Leo the Great, Basil, and others.

3. **Weekly fasts.**—We find the Wednesday and Friday fasts in the 3rd and following centuries, but not as a universal custom till the end of the 4th. In the 3rd cent. they are mentioned by Origen (hom. *in Lev.* x. 2; but in *c. Cels.* viii. 22, 'Paraskeue' must mean Good Friday and not every Friday, for otherwise Wednesday would be mentioned with it) and in the *Older Didascalia* (v. 14, ed. Funk: 'omni tempore' seems to mean 'all the year round'), which hints at the reason for the fasts on these days, which is explicitly given at the beginning of the 4th cent. by Peter I. of Alexandria (*Ep. can.* 15, really a fragment *de Pascha*)—that Wednesday was the day of the conspiracy of the Jews, and Friday of the Crucifixion. Augustine (*Ep.* xxxvi., Benedictine ed. [*aliter* lxxxvi.] 30 *ad Casulanum*) at a later day gives the same reason (for another explanation, see Clem. Alex. *Strom.* vii. 22). Eusebius (*Vit. Constant.* iv. 18) tells us that Constantine enjoined on all his subjects the observance of Sunday *and Friday*; he does not mention Wednesday. But these set weekly fasts were not universal. In the *Test. of our Lord* no fixed fast-days are prescribed in the week,[1] though the possibility of a fast-day falling in the week is allowed for, in which case the Eucharist is to be celebrated then (i. 22); for in some countries a fast-day was chosen for the Eucharist (Tert. *de Orat.* 19—Wednesday and Friday). The *Edessene Canons* prescribe service on Wednesday and Friday, which *may* imply a fast. Etheria at the end of the 4th cent. speaks of the observance of these days as fasts, and seems to say that the Eucharist was celebrated on them at 3 p.m., except in Lent. The *Hippolytean Canons* mention them as fasts, and say that the more devout added other fast-days as well (can. xx. [154]). These fasts are strictly enjoined in Cyprus towards the end of the 4th cent. by Epiphanius (*Hær.* lxv. 6; *Exp. Fid.* 22), who says that they were universal, and that the fasts of the 'stations' ended at the hour of the Lord's death, the 9th hour; also by the *Apost. Const.* (v. 14, 20 incorporating the *Didascalia*, and vii. 23 incorporating the *Didache*), with the same reasons for the choice of the days as we find in Peter of Alexandria; and by pseudo-Ignatius (*Philipp.* 13) and the *Apost. Canons* (can. 69).

In some cases the fast was prolonged to Saturday; the phrase was 'superponere' (ὑπερτίθεσθαι), or, in Tertullian, 'continuare jejunium.' The Council of Elvira in Spain (*c.* A.D. 305) ordered these 'superpositions' once a month, except in July and August, and not every week (can. 23, 26); though Saturday is not mentioned, that day is probably meant, but Hefele (*Councils*, i. 146) takes the phrase to mean an extension of the fast till evening. Saturday was often kept as a fast in the West, especially at Rome (so expressly Augustine, *loc. cit.*, though his words do not involve every Saturday in the year). But, in the East, Saturday was regarded from the 4th cent. as a festival commemorating Creation; and fasting on it, except on Easter Even, was strongly condemned (cf. Tertullian above, I. 2 (*e*); so *Apost. Const.* v. 14, 20, vii. 23, viii. 33; *Apost. Canons*, 64; and, later, the second Trullan Council, A.D. 692, which forbids fasting, as was practised at Rome, on Saturdays in Lent, can. 55). For this reason Saturday as well as Sunday was thenceforward regarded as specially suitable for a *synaxis*, with a Eucharist, as in the *Test. of our Lord* (i. 22, corrected text), the *Arabic Didascalia* (§ 38), the *Apost. Const.* (ii. 59 by implication), and at the Council of Laodicæa (can. 49, 51 [in Lent]); and in Socrates' time this custom was universal, except at Alexandria and Rome (*HE* v. 22; cf. Sozomen, *HE* vii. 19, who says that it obtained at Constantinople; see art. AGAPE in vol. i. p. 172). That the Saturday fast, however, was known in Rome as early as the beginning of the 3rd cent. appears from a remark of Jerome (*Ep.* lxxi. 6 *ad Lucin.*),

[1] But in the derived *Arabic Didascalia* (§ 38 [*c.* A.D. 400]) Wednesday and Friday are fast-days.

who says that Hippolytus discussed the question of the Saturday fast and of a daily reception of the Eucharist.

4. Pre-baptismal fasts.—These are twice prescribed in the *Canons of Hippolytus* for the candidates *and others.* In one place the length of them is not mentioned; in the other the candidates fast on the Friday before Pascha (can. xix. [106, 150–2]). With the last provision the corresponding passages of the Egyp. Ch. Ord. (§ 45) and the Ethiopic (§ 34) agree; the *Test. of our Lord* (ii. 6) says Friday *and* Saturday. In the *Apost. Const.* (vii. 22) the candidate is enjoined to fast beforehand, because our Lord fasted after His baptism. The canons of the '4th Council of Carthage' of A.D. 398 (probably a later compilation [Hefele, *Councils*, ii. 410]) seem to speak of a longer fast, but of a partial nature; the candidates must be proved by abstinence from wine and flesh (can. 85); and so Greg. Naz. (*Orat.* xl. 31) advocates fasting, vigils, and other exercises as part of the preparation. Cyril of Jerusalem (*Cat. Lect.* iii. 7, xviii. 17 [A.D. 348]) refers to pre-baptismal fasting, and says that the *competentes* took part in the Paschal fast, the 'prolonged fast of the Paraskeue.' In the *Clementine Recognitions* (vii. 34, 36, now thought to be of the 4th cent.) a fast of at least one day is mentioned, and this must be observed expressly with a view to baptism. Socrates (*HE* vii. 17) speaks of a Jew who for purposes of his own desired baptism from a Novatian bishop, being made to fast 'for many days.'

5. The Pentecostal fast.—There is some trace of a fast either before or after Pentecost; for ten days before the festival, in Philastrius (*Hær.* 119) and Isidore (*de Off.* i. 38); for a week beginning eight days after it, in *Apost. Const.* v. 20; cf. *Can. Hipp.* for sick persons (above, 2), but this shows that at the time when that manual was compiled the Pentecostal fast was not an ordinary observance. Athanasius alludes to a short fast (of a day or two [?]) after Pentecost in *Apol. de fug.* 6, *c.* A.D. 358. It probably began only in the 4th century.

6. Special and voluntary fasts.—Corresponding to the fast before ordination in NT is a special fast for bishops after their consecration in the *Test. of our Lord* (i. 22) and the *Arabic Didascalia* (23, 38). In several of the Church Orders voluntary fasts are recommended to widows and, indeed, to all Christians (*Test.* i. 42; Egyp. Ch. Ord. 47; Ethiop. Ch. Ord. 36; *Can. Hipp.* xx. [155]). The bishop, however, according to the second of these, ought not to fast except when all the people fast. In some places Jan. 1 was in the 4th cent. observed as a fast with a view to counteracting the influence of heathen New Year's orgies (Ambrose, *Serm.* ii. 'de Kal. Jan.'; Aug. *Serm.* cxcviii. 2, Benedictine ed., 'de Kal. Jan.'); but Augustine says that, if people cannot fast on that day, at least they should dine with sobriety. As monastic communities grew, from the middle of the 4th cent. onwards, special fasts became common in them. For monasticism and its discipline, see artt. ASCETICISM (Christian), MONASTICISM (Christian).

7. Fasting before and after Communion.—The fast before Communion corresponds in some measure to that before Baptism, but is not mentioned at so early a date. It is clear that, if the Agape was connected with and preceded the Eucharist (see the different views given in art. AGAPE), the latter could not have been received fasting: yet the feeling of reverence which dictated fasting before Communion would not be offended by the previous partaking of a sacred meal like the Agape in the same way as it would be offended by the partaking of ordinary food. But there is no evidence of the custom at the time when the Agape and the Eucharist were united.

The first writer who alludes to the custom is Tertullian (*ad Uxor.* ii. 5: 'quod secreto ante cibum gustes'; the reference is to private reservation of the Eucharist by the Christian wife of a heathen husband; cf. also *de Orat.* 19); but there is no hint that it was a novelty in his day. The next certain reference to the custom is in the 4th cent., when we find the rule laid down in the *Canons of Hippolytus* (can. xix. [150–2], xxviii. [205]), in the *Test. of our Lord* (ii. 20, 25), in the Verona Fragments (Hauler, p. 117), in the Egyp. Ch. Ord. (58), and in the Ethiopic Ch. Ord. (44). In some of these passages, but not in all, the rule is inverted: the faithful are to receive the Eucharist before they eat other food. The *Can. of Hippol.* say that no one is to taste anything before receiving the mysteries, especially on the days of the sacred fast; the last words show that the rule was not absolutely rigorous.

Though these passages are (probably) of the 4th cent., their wording shows that they are derived from the common source of these manuals, and therefore the rule goes back to the 3rd century. Of writers of the 4th cent. who insist on the rule may be mentioned Basil (hom. *de Jejun.* i.), Chrysostom (hom. 27 *in 1 Cor.* etc.), and Greg. Naz. (*Orat.* xl. 30). The last treats the custom as universal, though (he remarks) Jesus gave the 'sacrament of the Passover' after supper. Augustine makes it a Divinely established rule ('it seemed good to the Holy Ghost'—a common formula at one time for canonical legislation, from Ac 15[28]), and says that 'for the honour of so great a sacrament the body of the Lord should enter into the mouth of a Christian before other foods, for so is this custom kept throughout the world,' even although the disciples at the Last Supper did not receive fasting (*Ep.* liv. 8, Ben. *ad Januar.* [*aliter* cxviii. 6]). It is clear that in this matter an additional reason for fasting besides that of self-discipline presented itself to the Christian mind, namely, reverence for the heavenly gift.

Later, both in East and West, and among the Separated Orientals as well as among the Orthodox, the rule became very rigid (see, *e.g.*, Councils of Bracara, can. 10 [A.D. 572], Auxerre, can. 19 [*c.* A.D. 580], Toledo [A.D. 646]); but even in Augustine's time the rule was not absolute, for the 3rd Council of Carthage (A.D. 397; can. 29) excuses the fast before Communion on Maundy Thursday (perhaps the officiating clergy are meant), while saying that on other days the 'Sacraments of the Altar' must be celebrated by none but those who are fasting. This exception is attested by Augustine (*loc. cit.*), but was afterwards taken away by the 2nd Trullan Council (A.D. 692; can. 29). Socrates (*HE* v. 22) says that in the 5th cent. the Egyptians near Alexandria and the inhabitants of the Thebaid celebrated the Eucharist on Saturdays in the evening after having eaten; perhaps an Agape is meant. On the other hand, Augustine says that on Maundy Thursday there were two Eucharists—one early for those who did not fast on that day, and one late for those who did (*Ep.* liv. 9, Ben.). On fast-days the Eucharist was often celebrated at a late hour, that the people might remain fasting till then. It is sometimes said that there is a trace of this in Tertullian (*de Orat.* 19). But he seems to say the contrary—that the Eucharist on 'station' days was not deferred till the afternoon, but that scrupulous persons, who thought that by Communion they would break their fast, might carry away the holy gift and consume it after the fast was over. At the end of the 4th cent. Etheria implies that on Wednesday and Friday (the 'station' days) the Eucharist was celebrated at 3 p.m., except in Lent. At a later date an exception was made to the rule of fasting Communion in the case of the sick and of the Viaticum (see Scudamore, *Notitia Eucharistica*[2], London, 1876, p. 1036; and *DCA* i. 418*b*). It will be remembered that fasting Communion was made easier by the common practice of private reservation of the Sacrament (see Scudamore, p. 903, and Maclean, *Ancient Church Orders*, p. 56, for the authorities). The practice is referred to at Cæsaraugusta (Saragossa) in Spain *c.* A.D. 380 (can. 3, which forbids the communicant to keep the Eucharist by him without consuming it, or perhaps forbids the practice altogether).

Of a fast *after* Communion there are some slight traces, but not as early as the period now under consideration, the first *certain* reference being a law of Charlemagne (A.D. 809), which enjoined two or three hours' fasting after reception. This custom was observed by some till the later Middle Ages (Scudamore, p. 808; *DCA* i. 664 f.).

8. Fasting of penitents.—Fasting was enjoined on those under discipline, as appropriate to their penitence (*e.g.* Cyr. Jerus. *Cat. Lect.* ii. 9; Basil, *Ep.* xlv. 1; Socrates, *HE* v. 19). But it was not during this period inflicted as a special penance, the first certain instance being the 29th canon of the Council of Epaon in Burgundy (A.D. 517), in-

cluded among the canons of Agde or Agatha in South Gaul (A.D. 506; Hefele, *Councils*, iv. 76, 85). Thereafter the practice was common.

9. **When fasting was forbidden.**—On Sundays and in the season of 'Pentecost' (*i.e.* Eastertide, 50 days after Easter) fasting and kneeling were not allowed, both being considered unsuitable to a time of joy. The prohibition is found first in a fragment of Irenæus quoted by pseudo-Justin, *Quæst. et R. ad Orthod.* 115 (kneeling); then in Tertullian, *de Cor.* 3 (fasting and kneeling) and *de Orat.* 23 (kneeling); in the latter passage Tertullian says that some also abstained from kneeling on Saturdays, and that on fast-days prayer should always be offered kneeling. We find the same prohibition in Peter I. of Alexandria (*Ep. can.* 15, kneeling), in the canons of Nicæa (can. 20, kneeling), in the *Test. of our Lord* (ii. 12, fasting and kneeling in Pentecost), in the *Apost. Const.* v. 20 (fasting; the prohibition is not in the parallel *Didascalia*), and in the canons of Saragossa (can. 2, Sunday fasting). Pseudo-Ignatius (*Philipp.* 13) says that one who fasts on these days is a 'Christ-slayer.' The Council of Gangra anathematizes those who fast on Sunday from pretended asceticism (can. 18). Augustine is equally strong on not fasting on Sundays and in Pentecost (*Ep.* xxxvi. 18, Ben. [*aliter* lxxxvi.] *ad Casulan.*). See also *DCA* i. 725*a*.

III. *MEDIÆVAL AND MODERN PERIODS.*—(A) THE WEST.—1. **Lent.**[1]—Saturdays in Lent were expressly ordered to be kept as fast-days at the beginning of the 6th cent. in South Gaul, by the Council of Agde (can. 12). Yet, even so, 'Quadragesima' consisted of only 36 fasting days, since Sunday was not a fast. At Rome, Gregory the Great († 604) speaks of the fast being six weeks, *i.e.* 36 fasting days (hom. 16 *in Evang.*). So in 653 the 8th Council of Toledo in Spain repeats Cassian's language (above, II. 2) about Lent being a tithe of the year (can. 9). But in the 7th cent., before the Gelasian Sacramentary was drawn up, four days were prefixed to Lent, which thus began on Ash Wednesday, and consisted of 40 fasting days. At Milan the older custom survived; and, according to the Ambrosian rite, the Lenten fast still begins on the 6th Monday before Easter. In Scotland the four extra days were introduced by St. Margaret in the 11th cent. (*Vita S. Marg.* ii. 18); the Mozarabic rite adopted them only *c.* A.D. 1500 (Dowden, *Ch. Year and Kalendar*, p. 83). Gregory the Great recognizes sickness as a reason for not fasting (*Epp.* xxxii. xl.).

2. **Advent.**—This season, instituted in preparation for Christmas, is not heard of as a fast till just before the 6th century. Hence, from the fact of its once lasting six weeks no argument can be drawn as to the original date of the Western Christmas, as has lately been done by Kirsopp Lake (*Guardian*, 29 Dec. 1911). But the Council of Cæsaraugusta (Saragossa) in Spain (*c.* A.D. 380; can. 4) appointed the days from Dec. 17 to Jan. 6 as a solemn season for prayer and daily church-going, when 'no one may go with bare feet.' It was not, however, a fast. This may indicate that Jan. 6 was then observed in Spain, as in the East at that time, as the Nativity festival. The fast of Advent is first found in the Calendar of Perpetuus, bishop of Tours, A.D. 491 (*PL* lxxi. 566). It lasted from Nov. 11 (Martinmas) to Dec. 25, and was for three days a week. The Council of Mâcon (A.D. 581; can. 9) appointed for all a fast on Mondays, Wednesdays, and Fridays for the same period. For this reason Advent came to be known as 'St. Martin's Quadragesima.' The Council of Tours (A.D. 567) appointed a daily fast from Dec. 1 to 25 for monks (can. 17). At Rome, Advent never lasted for more than five Sundays (so even in the Gelasian Sacramentary [7th cent.]); and usually only for four (so Gregory the Great). Advent fasting soon died out in the West, and the season became merely a solemn time for prayer, as at the present day. But Bede (*HE* iii. 27, iv. 30) mentions a 40-days' fast before Christmas and after Pentecost as being observed by some devout persons in the 7th and 8th centuries.

3. **Pentecostal fast.**—The Council of Tours, A.D. 567, mentions a week's fast after Pentecost for monks (can. 17). In the 8th, 9th, and 10th centuries we find a 40-days' fast after Pentecost, sometimes called 'the Quadragesima before St. John the Baptist.' This is said by Theodore, Abp. of Canterbury († 690), in his *Pœnitentiale*, to be for all men. We find the same in Ireland *c.* A.D. 700, in Charlemagne's *Capitula*, and in the canons collected by Burchard, bishop of Worms, A.D. 1006 (Dowden, 85). For Bede, see above, III. 2. But this fast soon disappeared in the West.

4. **Rogation Days** are a Western institution only. They are the three days before Ascension Day (Holy Thursday), a fast preparatory to that festival. They are thought to have been instituted by Mamertus, bishop of Vienne on the Rhone, *c.* A.D. 470, at a time of earthquakes in Auvergne. He introduced penitential 'rogations' or processions for supplication. The Rogation fast was enjoined by the first Council of Orléans, A.D. 511, indirectly by that of Tours, (can. 17), and perhaps by that of Mainz, A.D. 813 (can. 32 f.; the fast not explicitly mentioned); in England by the Council of Clovesho, A.D. 747. It was enjoined by Leo III. at Rome, *c.* A.D. 800, as an intercession for the fruits of the earth. It is found in the *Missale Gothicum* (perhaps of Autun in France), *c.* A.D. 700. The procession still survives, especially in the form of beating parochial bounds; hence the names 'gang days,' 'gang week,' found in the *Anglo-Saxon Chronicle* and in the laws of Athelstan (Dowden, 87).

5. **Ember Days** also are found only in the West. They are the fasts of the four seasons ('quatuor tempora,' Germ. *Quatember*, whence perhaps the English name, though it is more plausibly derived from A.S. *ymbren*, 'recurring'), being (since the 11th cent.) the Wednesday, Friday, and Saturday after the First Sunday in Lent, Pentecost, Holy Cross Day (Sept. 14), and St. Lucy's Day (Dec. 13). They are particularly interesting as being the relics of the full weekly fasts of the West (above, II. 3), which thus have survived in only four weeks of the year; otherwise, the Friday fast is the sole survival of the weekly observance, though, in and after the Middle Ages, Wednesday and Saturday were sometimes observed as fast-days (see Procter-Frere, *Hist. of Bk. of Com. Pr.*, London, 1901, p. 331; and below, 8). Leo the Great (*c.* A.D. 440) refers to these fasts of the four seasons at Rome, held in Lent (Serm. 39–50), Pentecost (Serm. 78–80), the 7th (Serm. 86–94), and 10th (Serm. 12–20) months, *i.e.* Sept. and Dec.; and from Rome they spread over the West. But at one time they were held in some places only at three seasons, the sowing, reaping, and vintage; afterwards the winter Ember fast was added. The exact weeks, however, have varied. The Gelasian Sacramentary mentions the 1st, 4th, 7th, and 10th month. At the Council of Mainz (A.D. 813, can. 34) they fall in the first week of March, the second week of June, the third week of Sept., and the last full week before Christmas Even. In the *Leofric Missal* they are in the first week of Lent, the week of Pentecost, and in the full weeks before the autumn equinox and Christmas. Pseudo-Callistus (*Ep.* i. 1, part of the False Decretals of pseudo-Isidorus [*Ante-Nic. Chr. Lib.* ix. B, p. 203]) advocates their being held quarterly, with reference

[1] The English name 'Lent' is derived from Ang.-Sax. *lencten*, 'the spring.'

to the four seasons and the fruits of the earth. The Council of Clovesho (A.D. 747) enjoins the fasts of the 4th, 7th, and 10th months, but does not mention that of the spring, probably because it was absorbed in the great Lenten fast.

The original Ember Days had no reference to ordination, but, as seen in the 7th cent. Gelasian Sacramentary and in later authorities (though the custom may be earlier [Duchesne, *Chr. Wor.* p. 353]), it became the rule for bishops to ordain at these seasons, the fasting thus taking the form of a pre-ordination exercise; and this is the present aspect of the Ember Days. Minor orders, however, were conferred at any time. The present rule in the Roman Catholic and Anglican Churches is for ordination to the presbyterate and diaconate to be normally confined to these seasons, though the bishop has a discretion (see, *e.g.*, the preface to the English Ordinal in the Bk. of Com. Pr. and the English Canon 31).

6. Vigils.—These are single fasting days before certain saints' days and other festivals; but as fasts they are purely Western. Originally a 'Vigil' was a night spent in prayer, as often in the earlier periods (*e.g.* Etheria, *Peregrinatio*; Pontius, *Life of Cyprian*, § 15; Chrysos., hom. *de Mart.* ii. 668 D; Socrates, *HE* vi. 8). The substitution of a fast-day for this 'pernoctatio' probably dates only from the end of the 9th century. As Sunday cannot be a fast-day, if the day before a festival which has a Vigil be the Lord's day, the fast is kept on the Saturday.

7. 'Fasting' and 'abstinence.'—The Roman Catholics at the present day make a distinction between these. On a day of abstinence, meat is forbidden, but there is no restriction on the quantity of food taken; on a fast-day the quantity is also restricted. The distinction as regards England is modern; in the Anglican Bk. of Com. Pr. the two terms are used synonymously. The distinction was introduced among the English Roman Catholics in 1761, Fridays and Rogation Days being days of abstinence.

8. Fasts at the present day in the West.—The Church of England and the Church of Rome enumerate as fasts the 40 days of Lent, Ember Days, Rogation Days, all Fridays except Christmas Day if it fall on that day of the week, and Vigils before certain festivals. Roman Catholics in some countries relax the Vigils in favour of a stricter observance of Wednesdays and Fridays in Lent and Advent. Since the Reformation the Church of England, while fixing the fasting days, has made no rule as to how they are to be observed, leaving this to the individual conscience; but Acts of Parliament of Edward VI. and James I. and Proclamations of Elizabeth, vigorously enforced, ordered abstinence from flesh-meat on fast-days, and gave the curious reason for the injunction that the fish and shipping trades might be benefited; also, curiously enough, Saturdays are there mentioned as fast-days (see remarkable instances of the enforcement of these injunctions in *Hierurgia Anglicana*², London, 1902–4, iii. 106 ff., cf. i. 248). The Anglican *Homily of Fasting* (pt. i.) defines fasting as a 'withholding of meat, drink, and all natural food from the body,' and (pt. ii.) 'a restraint from some kinds of meats and drink'; it permits two meals on a fast-day (*Hier. Ang.*² iii. 108). A relic of the pre-baptismal fast is seen in the service for the baptism of such as are of riper years in the Bk. of Com. Pr., where the candidates are to be exhorted to prepare themselves with prayer and fasting (1st rubric). Fasting was markedly retained by the Protestant Reformers in Continental Europe; and the Fast Day (generally Thursday) before the Communion is a well-known feature of Scottish Presbyterian custom, observed with much rigour by the devout up to recent times. See also art. ASCETICISM (Christian) in vol. ii. p. 79. In Roman Catholic countries the days before Ash Wednesday, called 'Carnival' (? from Lat. *carnem levare*, 'to put away meat,' or *carne levamen*, 'solace in the flesh') are given to relaxation and entertainments. A certain relaxation also is permitted in Mid-Lent; the fourth Sunday in Lent, when the Gospel for the day narrates the Feeding of the Five Thousand, has long been called *Dominica Refectionis*, or 'Refreshment Sunday' (but in French *Mi-Carême*).

(B) THE EAST. — I. **The Orthodox Eastern Church.**—(*a*) Lent, the 'Fast of the holy and great τεσσαρακοστή,' in popular language σαρακοστή, begins on the Monday following Quinquagesima, which is called 'the Sunday of cheese fare' (ἡ κυριακὴ τῆς τυρινῆς); but meat is not eaten in the preceding 'week of cheese fare' (ἡ ἑβδομὰς τῆς τυρινῆς or τυροφαγοῦ). During this week cheese and eggs are permitted on Wednesday and Friday as well as on other days. The Sunday corresponding to the Western Sexagesima (that preceding the above mentioned 'cheese fare') is called the 'Sunday of meat fare' (ἡ κυριακὴ τῆς ἀποκρέω, the Carnival being ἀποκρέα or αἱ ἀποκρέω [often αἱ ἀπόκρεω] or, according to Dowden [p. 84], *Apocreos*). The Greeks do not fast on Saturdays and Sundays in Lent, except on Easter Even (Dowden, 84; see also Shann, *Euchology*, Kidderminster, 1891, pp. 261–3).—(*b*) The fast corresponding to that of Pentecost in old times (above II. 5, III. (A) 3) is called the 'Fast of the Apostles' [Peter and Paul], and lasts either a week from the morrow of the Sunday of All Saints (the octave of Pentecost), or till June 29, St. Peter and St. Paul's Day (Shann, 416).—(*c*) From Aug. 1 to 14 incl. is the 'Fast of the Mother of God,' before the festival of the Repose of the Virgin (Aug. 15); it perhaps once lasted for 40 days (*DCA* i. 662).—(*d*) The 'Fast of the Nativity of our Lord' (Advent) begins on Nov. 15, and lasts for 40 days up to Christmas (Shann, 498). This dates from not before the 9th cent. (*DCA* i. 32*b*), and even then was only for monks. Theodore of Balsamon (A.D. 1200) says that there was in his time only one τεσσαρακοστή, that before Pascha; the other fasts were of 7 days only (*ib.*). But now Advent is a fast of 40 days for all. The Greeks sometimes call it the 'Fast of St. Philip,' because St. Philip's Day falls on Nov. 14. The name τεσσαρακοστή is loosely applied to all the above fasts; cf. II. 2 above.—(*e*) Curiously enough, two festivals are observed as strict fasts: the Decollation of John Baptist (Aug. 29), and Holy Cross Day (Sept. 14); see Dowden, p. 91.—(*f*) Wednesdays and Fridays throughout the year are fasting days; but on the day before Ascension Day, oil, wine, and fish are allowed (Dowden, 87).

Of these fasts, Lent, Wednesday, and Friday are most obligatory; Nicolas Bulgaris (*Catechism*, § 119, ed. Bromage, London, 1893, p. 280) says that their observance is one of the five commandments of the Church, while he does not so characterize the keeping of the other fasts. In the *Orthodox Confession* (*ib.* note), another commandment of the Church is the observance of any fast expressly enjoined by the bishop of the diocese. The Orthodox Church combines with its injunctions to fast at certain times many warnings of the importance of fasting not being only external; it should lead to prayer and penitence (see, *e.g.*, *Duty of Parish Priests*, iv. 40–47 [Blackmore, *Doctrine of Russian Ch.*, Aberdeen, 1845, p. 262 ff.]). These warnings are also frequently found in the books of the other Eastern Churches, and need not be referred to again. (All dates given in this and the following sections are according to Old Style.)

2. The Armenians.—See FESTIVALS AND FASTS (Armenian).

3. The Monophysites.—(*a*) The customs of the *West Syrians* or *Jacobites* are less known to us than those of any other Eastern Church. Their Advent, or *Sūbārā* (*Sūbōrō* = εὐαγγελισμός), lasts for six weeks, as compared with 24 days of the Nestorians (below, 4).—(*b*) *Copts and Abyssinians.*—The fasts as enjoined in Filothaus' *Catechism of the Coptic Church* (Eng. tr. ed. Bromage, London, 1892, p. 42 f.) are: 'The holy 40 days followed by the week of the Passion' [they thus exclude Holy Week; see above, II. 2], Wednesday and Friday, the fast of Christmas, the fast *following* the day of Pentecost, the 'days relating specially to our Lady,' and the three-days' Nineveh fast. [For the three-days' fast (*sic*) of the Ninevites in OT, see *Apost. Const.* v. 20; but it is not there mentioned as a Christian fast.] In the fast, meat and butter are forbidden. Fasts are binding on all except 'infants, invalids, women in child-bearing, those worn out by captivity or exile, and the like.' We also learn that ordination among the Copts is *followed* by a 40-days' fast, and that between a death and burial all the near relatives fast (Fowler, *Christian Egypt*, London, 1901, pp. 208, 212). The Abyssinian fasts are still stricter.

4. The Nestorians (known also as *East Syrians*, *Assyrians*, or *Chaldæans*) are remarkable as fasting more strictly than their own Book of Canon Law, or *Sūnhādhūs*, requires. They abstain on Sundays in the fasting season, though the *Sūnhādhūs* forbids it because of the Manichæans. In some copies a saving clause says that 'a man may fast on Sunday if it is not from an evil and Manichæan intention.' The fasts observed by all are: (*a*) Advent, called *Sūbārā*, also 'The Little Fast,' Dec. 1–24 incl., though the *Sūnhādhūs* makes this a voluntary fast except for monks. (*b*) Lent, called 'The Fast' or 'The Great Fast,' lasting 50 days, including Sundays. The *Sūnhādhūs* mentions 40 days, but the Service-book called *Khūdhrā*, or 'Cycle,' allows for 50 days (with the Sundays included). Mid-Lent is often marked by some entertainment, but the fast is not broken. (*c*) The 'Rogation' (*bā'ūthā*, or 'supplication') of the Ninevites, the three days following the 5th Sunday after Epiphany. (*d*) Every Wednesday and Friday, not excluding Christmas Day.

Other fasts, not now universal, are the 15 days before 'Mart. Mariam' (St. Mary, Aug. 15), observed by many; the two 'Rogations' of Mar Zaia and of the Virgins, respectively the three days following the 2nd Sunday after Christmas and the 1st Sunday after Epiphany; the *shāwū'ā* (or period of seven weeks) of the Apostles (beginning Whit Monday; this is the Pentecostal fast, ending with the festival of the Twelve Apostles, or *Nausardīl*, 50 days after Pentecost—thus the Nestorians, by 'the Apostles' in this connexion, do not mean St. Peter and St. Paul); the *shāwū'ā* of Elijah (beginning 99 days after Pentecost). These two are mentioned by the *Sūnhādhūs* as voluntary fasts, but are now almost, if not quite, obsolete, and the Rogations of Mar Zaia and of the Virgins are nearly so. In the fast, meat, butter, milk, fish, eggs, etc., are prohibited; and the stricter Nestorians, especially those in the Kurdish mountains, will not eat, drink, or smoke in Lent till mid-day, except on Sundays. In other fasting seasons they may eat when they please, as long as they do not partake of the forbidden foods. In practice, the Wednesday and Friday fasts in most parts of the E. Syrian country only begin in the morning, and end at evensong, so that flesh-meat may be eaten thereafter (for the day begins and ends at sunset, and there is some inconsistency in not fasting after sunset on what we should call the day before); and usually from Easter to Pentecost, butter, milk, and eggs may be taken on these days. The usual food in the fast consists of bread, beans, rice cooked with walnut or other vegetable oil; vine leaves stuffed with rice and raisins and cooked in vinegar; treacle, fruit, raisins, and walnuts. A curious rule about the end of the fast reflects the difference of custom in the 4th cent. (see above, II. 2). The Advent and Lenten fasts end at evensong on Christmas Even or Easter Even, if one has communicated at the Eucharist of the Even; otherwise it does not end till the Eucharist of the festival (the rule is not of universal application). On fast-days the Eucharist is celebrated late—often as late as 1 p.m. or 2 p.m.—that all may remain fasting till then (see above, II. 7). Another rule (perhaps now obsolete) is that, if a person does not communicate at or about Easter, he is not to eat meat for a month; if he has communicated on Maundy Thursday, but not on Easter Even or Easter Day, then for a fortnight. (For the information in this section, see Maclean-Browne, *The Catholicos of the East*, London, 1892, p. 340 ff.) In this Church, as now among the Greeks (see above, III. (B) 1), there is no difficulty about a festival and a fast falling on the same day; as a matter of fact, most of the holy days fall on a Friday, but that day is, nevertheless, a fasting day.

All the Eastern Churches are strict about the fast before Communion. In some cases (*e.g.* the East Syrian *Sūnhādhūs* [Maclean-Browne, p. 343]), the clergy who take any part in the Eucharist or baptism or ordination must be fasting.

FATALISM.—See FATE, NECESSITARIANISM.

FATE.

FATE.—I. *DEFINITION.*—The idea of Fate is found only in conditions where some attempt has been made to trace all phenomena, and more particularly the phenomena of human life, to an ultimate unity. Fate, indeed, is precisely this unity apprehended as an inevitable necessity controlling all things; it is the absolutely inscrutable power to which all men are subject, and may be either personified or represented as impersonal. It is a conception which prevails wherever the mind of

man is unable to frame the idea of rational necessity or of a supreme purposive will, and it survives so long as either of these, though within the field of consciousness, is imperfectly realized. Further, men tend to fall back on the idea of Fate when, at a higher level of intellectual development, they begin to doubt of a rational order, or a rational end, in the universe. If any distinction is to be drawn between Fate and Destiny, it is simply that the latter is but the former regarded as operative in particular cases. The idea of Destiny, however, does not necessarily preclude the rationality of the thing destined; it merely implies that this rationality is not perceived. Destiny, in fact, being a somewhat indefinite conception, may even connote an ethical vocation, and may in that case be applied to the end which a higher will sets before a moral personality as an ideal to be realized in moral endeavour.

II. *HISTORICAL SURVEY.* — **1. Non-Christian religions.**—In the course of history, Fate has assumed various forms. (1) In *polydæmonistic religions* thought is as yet too incoherent to give definite shape to the idea. Crude anticipations thereof emerge when men begin to reflect upon their lot, as, *e.g.*, in the 'Life-Dream' of the American Indians, amongst whom, however, the prevailing idea is that of dependence upon particular spirits, these not being supposed to form a unity. An important place is certainly assigned to the Death-god, the All-Father, or Great Spirit, but he is not figured as Fate, for the simple reason that the conception of necessity, or even of the necessary order of Nature, has not yet dawned upon the mind.

(2) A closer approximation to the idea of Fate is found in *religions which recognize the uniformity of Nature*, more especially as seen in the courses of the heavenly bodies, and which develop an astrology. This stage was reached by the Quichuas and the Aztecs, who, having various astrological beliefs, began to entertain surmises regarding the operation of Fate in human life, and, interpreting this as the will of the gods, sought to get into right relations therewith, and with its actual decrees, by means of magic, oracles, dreams, and haruspication. Among the Aztecs, in fact, there was a special school of astrology, while full credence was given to the manifold evil omens which pointed to the downfall of their kingdom.

(3) We meet with the idea of Fate also in *religions in which the process of Nature forms the dominant factor*, such as the Egyptian, in which the leading motive is the antithesis of life and death; or the Babylonian, which is permeated by the thought of the uniformity of Nature, more particularly as exemplified in the movement of the stars. Yet we must not forget that these religions likewise show a high ethical development, however incongruous with their naturalistic tendencies this may appear.

(*a*) In the religion of *Egypt*, magic papyri are regarded as equally effective with good works in obviating the penalties of the final judgment. The Egyptians speak of Nūter, the Power or Deity; they personify law in the goddess Ma'et, who in reality stands for natural order, but has also moral attributes; they find a place for Destiny in the Hathors, Shai, and Rennenet; and, in fact, as the system in its entirety, notwithstanding its ethical aspects, is dominated by the process of Nature, it exemplifies a stage of development in which Fate takes the form of natural necessity, as may be inferred likewise from the magical arts by which souls are to be delivered at the day of judgment. See, further, FATE (Egyptian) and ETHICS AND MORALITY (Egyptian).

(*b*) The *Babylonians* had a profound sense of the august will of the gods, as that which maintained not only the order of Nature but also the ordinances of the State, and in their penitential psalms the devout make sorrowful confession of their offences against both. Yet we find among them so much in the way of exorcism, magic, and astrology as to make it appear that in their view the order of Nature was simply an all-controlling Destiny: the stars decide the lot of men. The Chaldee astrology, we should note, was still a power in Rome. See, further, FATE (Babylonian).

(*c*) Similar conditions meet us in *China*. The worship of spirits is there associated with reverence for natural law, of which, again, civil law is simply a particular phase. In the religion of ancient China, systematic knowledge of the order of Nature—an order believed to emanate from Heaven, from the Sovereign Deity—was obstructed by the belief in spirits, as appears from the respect accorded to soothsaying and astrology. Here morality really consisted in the due observance of class-precedence, *i.e.* in the recognition of that domestic and civil order which is at the same time the order of Nature. To this impersonal Fate mankind was fettered. The reform inaugurated by Confucius was so far ethical that he laid the supreme emphasis upon practical obedience to the law, and supported his demands by examples culled from the history of the ancient empire. But, while he is convinced that obedience to the moral law is attended with the happiness which is organic to the order of Nature, he does not develop this view to its logical issues. The man who does right should have no anxiety regarding the result.

'If the wise man achieve something, it is well; if he achieve nothing, it is also well: he recognizes Destiny.' 'The perfect man sees danger, and yet bows to Destiny.'

Although Confucius sought to limit the sphere of sorcery and the belief in spirits, he did not identify Destiny with Providence; and, while he yields a certain recognition to Providence, he is, nevertheless, content to ascertain what the order of Nature prescribes; for him Destiny still remains the necessity to which he adjusts himself, though he does not directly assert that it possesses moral attributes. The natural order was recognized still more distinctly by Lao-tse, who actually idealized it as the metaphysical force that he calls *Tao*. Tao is the source of that economy which is manifested both in Nature and in the State. It shows no partiality. To it man must yield himself without desire, and in it, renouncing all passion, he must find peace. Lao-tse takes his stand upon the necessity of this self-adjustment. But Tao, notwithstanding all its ethical accretions, still remains a merely natural power, like Heaven itself. As a matter of fact, the ever-growing practice of soothsaying—the *feng-shui*, or geomancy—shows how firmly-rooted was the belief in Fate, in a country where men had an inkling, but no concrete knowledge, of the order of Nature, and tried to fathom its mysteries by fantastic expedients of all sorts. In reality China is at that stage of development where order is felt to be morally determinative; but, as this order is essentially a natural order, it is neither more nor less than Fate. See, further, FATE (Chinese) and FENG-SHUI.

(*d*) The conception of Fate is found also in the *Teutonic* religion. Though the process of Nature is here combined with the ethical process which terminates in the *Götterdämmerung*, the 'twilight of the gods,' yet guilt and impermanence—to which the gods themselves are subject—operate as a tragic doom hanging over the world. The destructive elements, viz. the Fenris Wolf, the goddess Hela, and the Midgard Serpent, at length gain the upper hand, while Odin himself falls swooning from the world-ash. The cosmic process, in short, comes to its consummation as something destined. From

the beginning the worms are gnawing at the tree Yggdrasil. In the waters of Urd dwell the three Norns, daughters of Hela, goddesses of time—past, present, and future—who spin the threads of fortune; goddesses of Destiny, who are older than Odin. Thus the idea of Fate, especially in its tragic form, plays a part in this religion also. The moral element is certainly not absent, but the moral process is mainly one of dissolution. It is a moot point whether the anticipation of a new world under Vali and Vidar belongs to the original Teutonic tradition. In any case this religion looks upon the transitoriness of Nature and human life as the decree of Fate. See DOOM, DOOM MYTHS (Teutonic).

(*e*) The Indo-Germanic peoples of *India* combined Fate and ethics in a somewhat different way. Brāhmanism and Buddhism are both dominated by the doctrine of re-birth—the evil cycle from which no one can extricate himself. The *Ṛta* of the Vedas may be regarded as an analogue of the Greek Μοῖρα, since the ordered process it denotes is by no means thought of as purely ethical. In *Brāhmanism*, it is true, the *Ātman* (*q.v.*) or *Brahma* seems to be something more than Fate. But, on the other hand, later Brāhmanism possesses an emanational doctrine, representing in the *Trimūrti* the cycle of generation and dissolution in Nature; while, again, it shows a wide diffusion of the belief in blind destiny. Even the caste system is simply the malign reflex of the theory of natural necessity, as a force which holds all men in its sway, and from which none can deliver himself, the fate of the individual having been fixed by his birth. The system of caste is fostered also by the doctrine of re-birth. It is true that this doctrine contains the element of retribution, but the exhaustless cycle and the interminable suffering of life which it involves are, after all, a necessity of Nature, a decree of Fate. To wrench oneself free from the chain of re-birth is possible only for those who become absorbed in mystic contemplation and live as ascetics, *i.e.* those who belong to the two higher castes. In other words, the conception of Fate forms the substructure of Brāhmanism in its exoteric form. See, further, FATE (Hindu).

The same holds good of *Buddhism*, the basis of which is the doctrine of universal suffering in an infinite cycle of re-births. In this religion, too, the necessary continuity of Nature is represented as moral retribution; nevertheless, it is predominantly regarded as an inherent Fate, in which man finds himself enmeshed against his will. Deliverance is, indeed, possible for those who renounce all life, all desire, all finitude, in order that they may enter Nirvāṇa; and the way is open to all. But Buddhism in its original form is so closely identified with a fatalistic view of the continuity of Nature that the deliverance which it proffers involves the destruction of personality, the conception of Spirit as something which transcends Nature not having as yet been attained. The latter feature is reflected also in the various magical expedients by which popular Buddhism seeks to dominate Nature, as also by the mechanical formality of the popular worship. Exoteric Buddhism, in short, is destitute of any positive spiritual content. See, further, for a somewhat different view, FATE (Buddhist).

(*f*) Fate plays a considerably less important part in the dualistic religion of *Persia*, but it has not been altogether eliminated. Though in this religion Spirit has won a positive significance, and Ahura Mazda ranks as the Supreme Power, yet the latter is opposed by Angra Mainyu, and the created world is an amalgam of good and evil, benefit and bane. It is believed, indeed, that the conflict between the two powers will eventually eliminate the evil, and that man's part in the campaign is to espouse the cause of Ahura Mazda by obeying the laws of Zarathushtra; meanwhile, however, man is entangled in an evil world, beset upon every side by demons, from whose wiles he must guard himself; and even the Supreme Deity himself, though sure of ultimate victory, is not as yet wholly free, but physically and spiritually circumscribed by the evil spirit. Now, as this evil spirit acts without reflexion, and under the influence of a blind impulse of nature, and as he is supported by a whole host of demons, who shed abroad darkness and sorrow, tempt to robbery and tyranny, stir up hatred and revenge, and disseminate evils of all kinds, including even the unsavouriness of food—men are clearly subject to an alien necessity, from which they may, indeed, with the help of the law gradually free themselves by a struggle, but by which their earthly existence is heavily trammelled. We shall hardly err, therefore, in saying that in Parsiism the conception of Fate has not been fully transcended, though it has certainly fallen into the background. The dependence of the Supreme Deity upon Angra Mainyu, as represented in the later Avesta—even though that dependence be but temporary — bears an ominous resemblance to the idea that the gods themselves are subject to Fate. That Angra Mainyu appears as personal cannot hide from us the fact that he and his demonic hosts alike are under the control of a blind will, thus resembling a natural force which acts in opposition to the highest god and compels him to struggle. The naturalistic limitations of Parsiism are also shown in its fire-worship, and the partial worship accorded to natural deities. Furthermore, *Asha*, the Persian analogue of the Indian *Ṛta*, does not symbolize a purely ethical order. The potent influence of the conception of Fate—an all-controlling factor in human life—in this system of dualism may probably be traced in the later theological idea of *Zrvan Akarana*, or Infinite Time, which forms the apex of the system, and furnishes the starting-point of the dualistic process. Again, in the *fravashi* (*q.v.*), the guardian angel of the good man, we recognize the belief that human beings are surrounded by friendly and beneficent spirits, as well as by assailants of evil intent; while the belief that the latter can be effectively counteracted by oft-repeated prayers opens the door to exorcism and magic — to that mechanical debasement of religion, in fact, which corresponds to a naturalism not yet transcended.

Finally, the various systems of Gnosticism influenced by this religion, as also Manichæism, are largely pervaded by the conception of Fate: thus, they regard mankind as divided by nature into pneumatic, psychic, and hylic groups, the lot of the individual being determined by the extent to which the evil principle intermingles with his being. See, further, FATE (Iranian).

(*g*) Nor had the religions of Greece and Rome quite outgrown the belief in Fate. As regards *Greece*, it is true that Homer places Zeus on the throne of Olympus; but, as the gods are still to some extent liable to envy and caprice, they are shadowed by Μοῖρα, or Necessity; and, although Destiny is spoken of as the 'decree of Zeus' (Διὸς αἶσα), yet it is Μοῖρα who, acting independently of Zeus, assigns the term of human life. In the tragic poets the idea of Fate was superseded by that of a just and beneficent world-order controlled by Zeus: Μοῖρα gives place to Δίκη. They warn men against ὕβρις, the temper which transgresses the limits of human power. The jealousy of the gods was repudiated by Pindar in favour of the idea of retribution. In the hands of the tragedians, Fate acquires an ethical significance: the Μοῖρα

combines with the *Erinyes*, who punish ὕβρις. While in Sophocles the distinction between Fate and guilt is frequently obscured, and guilt may sometimes fasten upon the innocent, yet he also expresses the conviction that presumption will be visited with stern retribution, and that hardship and sorrow may lead to glory. In Greek philosophy likewise, the trend of which was towards monotheism, the Deity is extolled as the supreme Idea of the Good, as the supreme Reason, as Providence, though we still hear of Ἀνάγκη (Necessity) and Εἱμαρμένη (Fate). In point of fact, natural necessity and Providence are not as yet sharply distinguished, and, accordingly, the moral personality has not attained to complete emancipation from Nature. Nature, indeed, save where it was interpreted by reason from the æsthetic standpoint, was always a mystery; and, though the Stoics regarded the gods themselves as organs of Providence (not altogether free from natural necessity), we need hardly wonder that even amongst them the occult arts had a place. Nor were the Neo-Platonists, notwithstanding their ὑπερόντως ὄν (super-existent Being), quite free from a natural dualism in their view of matter; and, consequently, they too fell back upon magic and theurgy. In a word, Greek thought did not succeed in fully harmonizing moral reason and natural necessity; it either identified the two, or admitted a residuum of dualism, and, while the conception of cosmic unity became more and more clearly formulated, all the more persistently did some remnant of fatalism maintain its ground, asserting itself alike in ritual and in moral life. See, further, EUMENIDES.

The belief in Fate survived also in *Rome*, where it assumed a largely practical form, being associated with the *Fata*, or destinies of individuals, and with the practice of augury connected therewith and developed mainly from Etruscan sources. The *Fata* were primarily concerned with birth and death. The later period of Roman history was remarkable for its syncretistic tendencies, the city becoming a rendezvous for sorcery of all kinds, Chaldæan astrology, Greek oracles, etc. Fortuna (τύχη) was worshipped as the goddess of Destiny, as were also the Parcæ. The *fatum*, or lot, of the individual or the State was doubtless traced back to the gods; but along with this flourished a belief in Fate as an independent power, manifesting itself in various *prognostica*, the interpretation of which was a craft by itself. Thus there was ever the *Dira Necessitas* hovering above the life of man. See, further, FATE (Greek and Roman).

(4) One might naturally suppose that the idea of Fate would be absent from religions which adhere to a *supranatural theism*, such, *e.g.*, as the leading faiths of the Semitic world. This, however, is by no means the case. We must not forget that in those religions the Divine will, being regarded as absolute sovereignty, really takes the form of inevitable necessity. In the last resort chance and necessity signify the same thing, viz. a necessary force determining human life and not as yet fully illuminated by reason.

(*a*) So far, therefore, as *Judaism* holds by the absolute prerogative of God, it fails to exclude fatalism. Certainly the God of Judaism is supranatural; Nature lies within His power; He assigns reward and punishment according to His righteousness, not according to a necessary law of Nature; He guides His people to a goal fixed by Himself, and disciplines them by dealings adjusted to their conduct towards Him. But, as this righteous régime does not always vindicate itself in the actual lot of the people or the individual, there emerges a kind of scepticism which, as in the book of Ecclesiastes, takes the form of a threnody upon the vanity of earthly things. While the book certainly declares that God will bring every work into judgment (Ec 12^{14}), it also says that the sons of men are snared in an evil time when it falleth suddenly upon them (9^{12}), and that there is no work, or device, or knowledge, or wisdom in the grave (9^{10}). The destiny of man, ending as it does in Sheol, is vanity. Here we discern traces of fatalism, of resignation to an inevitable necessity. Moreover, bearing in mind the Israelite idea of God's peculiar relation to His chosen people, and the relentless spirit of the imprecatory Psalms, we see that the Israelite view of election implies a certain caprice and arbitrariness in the Divine nature. The God of Judaism manifests love and righteousness to His own people, while He leaves the heathen to themselves. Such an arbitrary choice lies upon the Gentiles like an evil doom, which they can do nothing to avert. The idea, promulgated by some of the prophets, that the Gentiles should come to pay homage to Jahweh at Jerusalem, is little more than a religious parallel to that of the political supremacy of Rome and Juppiter Capitolinus. See, further, FATE (Jewish).

(*b*) In *Muhammadanism* the supremacy of omnipotent Will is still more strongly asserted; for, though God is represented as compassionate and just, yet, in face of every attempt to maintain a place for free will, the most rigorously fatalistic doctrine of the Divine omnipotence at length won the day through the advocacy of the Mutaqallim. God being the Creator of all, and indeed, as the Mutaqallim hold, creating the world anew every moment, all freedom is excluded from the world, and man's only course is submission to the will of Allah—*Kismet*. Kismet differs from Fate only in its being referred to an all-powerful Will; all human appeal against either is in vain. Man may follow the law of Allah, but must, none the less, submit to his own destiny; an absolute determinism blights all spontaneity of action, leaving room at best for fanaticism—a phenomenon observed also in the ecstatic dancing of the dervishes, whose frenzies are attributed to Divine possession. Moreover, in view of the fact that the new authoritative doctrine of the non-created character of the Qur'ān, the depository of God's will, proscribes all criticism and clogs all freedom, it is easy to see how in Islām mankind becomes subject to an absolute necessity—even though such necessity is figured as omnipotent Will—and how, in short, the belief in Destiny may still cohere with ethical ideas. The arbitrary will of omnipotence and the blind necessity of Nature thus come eventually to the same thing—the non-moral subjection of mankind to an inevitable necessity. See, further, FATE (Muslim).

2. Fate and Christianity. — Belief in Fate is transcended only when men come to regard themselves as free, as called by the Deity to a responsible moral life, and when the Deity is regarded as ordaining all things in His wisdom and providence, to the end that man may enjoy the liberty of the children of God in a Kingdom of God, so realizing not merely his essential independence of Nature, but his actual lordship over it. Fate, in fact, is transcended whenever dependence upon God becomes the spring of free action, all things being then regarded as necessarily subservient to man's highest interests, and man himself as capable of so utilizing them. Such is, ideally at least, the view held by Christianity, and, accordingly, Christianity repudiates *on principle* all belief in Fate. The Christian religion regards the Supreme Power of the world as a rational Will by which all things are made to promote the ends of the Kingdom. Here omnipotence is not arbitrary, but is one with the all-wise Will; nor is necessity blind, but

rational, and likewise identical with the all-wise Will—the Will which always acts as a moral stimulus to the freedom of man. Only when freedom and necessity are recognized as being one in the Deity is it possible for Destiny to give place to Providence; only when man realizes his freedom as that which lays upon him the obligation of self-determination in the sphere of conduct does he cease to resort to the occult arts; and only as he knows that all things can be utilized for the highest ends does he finally break with the idea of Fate. These beliefs, however, constitute in essence the Christian point of view.

Nevertheless, it cannot be said that Christianity is even yet entirely free from the belief in Fate. For one thing, vestiges of the idea have worked their way into Christian doctrine; and, again, traces of it are actually found in Christian practice; while, finally, the Christian world shows a recrudescence of certain theories of the universe which, avowedly opposed to the Christian view, have rehabilitated the belief in Fate in one or other of its forms.

As exemplifying the first of these tendencies we shall speak of Origen and Augustine, the two greatest thinkers of the Patristic period; from the Mediæval period we shall cite Aquinas and Duns Scotus; and from Protestantism, Calvin and Schleiermacher.

i. *Fate in Christian doctrine.*—(1) *Patristic.*—(*a*) In so far as Origen regards the world as originating in a condition where all spiritual beings were of the same sort, and believes that, when the fall of spirits has reached its term, the world will be restored to its primal state, his doctrine is still capable of a Christian interpretation, since, in fact, mankind is being raised, under Divine tuition, from its present sinful condition towards perfection. But, as Origen also conceives of this world-process as eternally recurrent, he does not get beyond the idea of an endless cycle, and thus still retains something of the ancient conception of Fate. Again, while he holds that man may become one with the Divine Logos in virtue of his freedom and his rational nature, thus making Christianity the rational and ethical religion, yet his view of the Father, as supremely exalted above the Logos, and of man's incapacity for perfect oneness with the Father, practically makes God a super-ethical and metaphysical Being. Nor is Origen always consistent in his theory of the relation between the Logos and the Father, the Logos being sometimes spoken of as a natural and necessary efflux from God, and sometimes as a product of the Divine will; and, similarly, God is now the rational Will which reveals itself in the Logos as Love, and now a simple metaphysical Monad, which creates the Logos by natural necessity. This inconsistency repeats itself in Origen's view of the world: now he accepts ἀποκατάστασις, man's final unity with God, while, again, this unity is ceaselessly ruptured by finite free will—the irrational factor in the world. Finally, in Origen's theory it is mere metaphysical caprice which excludes the creature from perfect unity with God and casts him again into the endless cycle of fall and restoration—a process which holds him in its grasp like inevitable Fate itself. The relapse into sacramental magic with which the early Greek Church is sometimes charged is, so far as the charge is valid, attributable to the fact that that Church had not yet fully attained to an ethical conception of God.

(*b*) A similar inconsistency appears in *Augustine.* He interprets God, on the one hand, as a Trinity of conscious loving Will, manifesting itself in the *gratia* of the Holy Spirit, but again, on the other, as a self-identical, metaphysically simple Being; in the last resort, indeed, God is an arbitrary Will, who, precisely as in the Jewish doctrine, elects some out of His mere grace and rejects others. Moreover, God works irresistibly in the elect as an impersonal *gratia*; and, just as these can do nothing to procure their election, so the reprobate likewise are under an absolute decree, shadowed as if by a necessity of Fate, and even children who die unbaptized are consigned to perdition. Such views present us with unmistakable vestiges of the belief in Fate. Further, in Augustine's differentiation of the world from God in virtue of its containing an element of negation which did not originate in Him, we recognize a remnant of the belief in a power antagonistic to God; God is the *summum Esse*, the world the *minus esse.*

(2) *Mediæval.*—(*a*) According to *Aquinas*, God is *purus actus* (pure action) and rational substance, and the world is the stage upon which this rationality is revealed. The world stands in a substantial relation to God, and the Divine reason displays itself in the order, the necessary uniformity, of the world, which forms a whole just because it contains every grade of being, evil itself not excepted. Aquinas, indeed, even maintains that God gives the world a share in His own goodness, His rational existence, though not all in the same degree. Such a view seems to leave no room whatever for Fate, but, in point of fact, Aquinas traverses it by another conception. He holds that the world is differentiated from God by its element of negation, which involves a decrement of substance. Hence, of course, a real union between the human reason and God is possible only by a suspension of this negation. In order, therefore, that man may become one with God, Aquinas introduces a supernatural communication, by which the finite, the natural, the negative, the spontaneous are all annulled in order to make way for the Divine action, as is seen more particularly in the special powers attributed to the sacraments—the channels of Divine grace. Here we recognize an element of dualistic fatalism. As was to be expected, Aquinas makes no mention of Fate, but in this inherent imperfection of things—an imperfection capable of being removed, though only in part, by a supernatural intervention annulling the natural—we may discern traces of a negative anti-Divine power, which, as it is not rational, has something in common with blind necessity, or Fate.

(*b*) On the other hand, *Duns Scotus* premises that God is sovereign and free,—subject to no necessity whatever,—and that the concrete world does not rest upon negation. The perfections of the concrete, in fact, are comprised in God's essence, in the Divine mind and the Divine thoughts, and in these the world can participate. According to Duns, God is a self-knowing, self-affirming, independent, and blessed Will, creating the world voluntarily, and admitting it to a share in His perfections by His voluntary decree. It is the Divine Will alone which determines what kind of perfections the world is to receive, and whether it is to receive them at all; or, in other words, the very existence of the world, the 'that' of the world, depends upon the volition of God. As this Will, however, acts by free choice, the existence of the world is contingent; and this is the real cause of its imperfection. Now, though Duns proceeds to say that God loves the world, and mankind in particular, he traces this love to God's self-love, mankind being, as has been indicated, a sharer in God's own perfection. But in Himself God is all-sufficient, and the very existence of the world remains for Him quite as contingent as the particular character of its structure and order. In His intrinsic essence, therefore, God remains alien to the world, as that which is in its nature contingent.

It also follows from this that man can apprehend the will of God only by revelation through the Church, and must, accordingly, obey the Church's behests. In this contingency of the world we trace once more some residual idea of Fate, for the Divine decree, while emanating from the free sovereignty of God, is, so far as the world is concerned, simply a destiny which it must fulfil. That which for Aquinas is supernatural necessity and negation is for Duns Scotus the arbitrary determination of God, and, consequently, the idea of Fate is not fully surmounted by either.

(3) *Protestant.*—(*a*) The same thing may be said in regard to *Calvin*; nor, indeed, does either Luther or Zwingli differ from him in the matter under discussion. It was Calvin, however, who most consistently developed the fundamental idea, and we may therefore take him as representative, more especially as his view is shared by some theologians at the present day, of whom we may instance Kuyper. It is true that, if we fix our attention upon Calvin's teachings regarding the elect—namely, that God has chosen them in order that they may do His will, that He assures them by His Holy Spirit of their election, that the general grace of God is at work throughout the world, and that, accordingly, secular callings have their rightful place in the Kingdom of God, while the State, as also science and art, may likewise subserve His glory—it may well seem that everything in the nature of Chance or Fate is excluded. But if, on the other hand, we bear in mind that, according to Calvin, everything is subject to the omnipotent Will, and that a certain number of the human race are rejected from the outset, simply because God willed that they should be sinful and should persist in their sin, it is plain that the ethical purpose of God is subordinate to His arbitrary decree. God's *horribile decretum* is thus, so far as the reprobate are concerned, neither more nor less than a Fate from which there is no escape. As, in fact, the Divine decree, once fixed, is carried out with absolute necessity, and as no man can do aught to procure his own salvation unless he is empowered thereto by God, it is clear that Calvin has so far failed to free himself from fatalism.

(*b*) *Schleiermacher* attempts to make good this defect in the doctrine of election by limiting the Divine decree exclusively to the particular time at which an individual shall come to participate in the Christian salvation. He seeks to show that the Divine plan of the world is a unity, and that the communion with God which accords with the nature of man is so realized in Christianity as to become the spring of moral conduct. From this it would appear that his belief in Providence embraces the whole world, and that the entire world-order is illumined by the Divine reason. On the other hand, Schleiermacher's idea of God as the absolute undifferentiated unity of all opposites, and of the world as the sphere in which these opposites fall apart, implies that the world is not only different from God, but permanently imperfect as well. As Schleiermacher has given no definite expression to his view of the world's final purpose, we may fail to observe this lacuna in his thought, but, in point of fact, his philosophy is still burdened with the ancient theory that the world is the realm of negation. The more perfect the world becomes, the more completely must its opposites disappear, and the more nearly must it approximate to the undifferentiated unity of God, *i.e.* cease to be a world at all. Further, the order of Nature, as a product of Divine omnipotence, stands at the centre of Schleiermacher's system, and it is very doubtful whether, on his view, the moral order takes precedence over the natural order and assimilates it, or, on the other hand, the ethical life is not as subject to natural law as Nature itself. In short, neither the metaphysical conception of God as an absolutely simple Being, and of a natural uniformity to which all things are subject, nor the idea that the world's imperfections rest upon its opposites, is calculated to dispel the suspicion of a fatalistic ingredient. Since good and evil, alike in a physical and in a moral sense, have both a necessary place in the world-order, and since the world, on account of its difference from God, is doomed to permanent imperfection by God Himself, its absolute sovereign, the lingering trace of the conception of Fate in Schleiermacher's theory is quite unmistakable.

ii. *Fate in common life.*—It is also obvious that vestiges of fatalism are present in the everyday life of mankind, as, *e.g.*, (1) in the manifold *superstitions* handed down from earlier stages of religion —observance of days, exorcism, astrology, oracles, drawing lots, etc.—as also in the use of amulets, scapulars, images, and miraculous preventives, to all of which magic virtues are ascribed. The same tendency appears in the idea of 'luck' as the condition of success, the underlying thought being that one man is a favourite, and another a victim, of fortune, whether in play or in more serious matters. Such notions are frequently associated with a pleasure-seeking and immoral spirit, as in those who look for success not to their own efforts but to extraneous influences, and are disposed to take what comes with resignation. Similarly, many decline the moral task of deciding questions for themselves, and have recourse to something of the nature of an oracle, which will give a decision by mere chance and without any rational connexion with the matter in hand; or, again, they help themselves out of a practical dilemma by referring to some contingent natural phenomenon which is believed to exert a magical influence, but which has no ethical import at all. The power thus supposed to help or hinder is represented as working, not by rational or moral means, but through the blind mechanism of Nature; while, again, the belief in Providence as applied to ordinary life and practice frequently exhibits traits that really belong to fatalism.

(2) As another instance of the still surviving influence of the belief in Fate we may refer to *poetry*, and in particular to the *drama*, though it is by no means only the dramas of Fate strictly so called which exhibit the feature in question. The dramatist who would portray the tangled skein of life is at no loss for situations in which a blind destiny, a *dira necessitas*, seems to rule. He sees a human being held in bondage by ignorance, and that through no fault of his own; or immured from childhood in a narrow or uncongenial sphere, so that the wing of spiritual aspiration is lamed from the outset. In the drama, again, decisions of the gravest import are often brought about by events that seem purely accidental, so that the individual comes to feel that he is but the plaything of an inexorable power. His very ignorance of the larger concatenation of things prompts the thought that he is in the grasp of a blind destiny. But, even when he is aware of this larger concatenation, he may still feel compelled to bow before an all-ruling necessity, as something actually experienced, and it is this iron sway which the dramatic poet often makes it his task to bring to light. Such an imminent and inexorable necessity, whose causal relations we may so far recognize, though their deeper significance remains inscrutable, must likewise fall under the conception of Fate.

(3) A recrudescence of the conception shows itself also in *certain recent philosophical ideas.* Thus, those who find the sole regulative principle of things in the mechanism of Nature do not seem

very far away from the ancient belief. Herbert Spencer, for instance, if we may judge from the elucidation of his system, sees the necessary causal energy of the Unknowable everywhere in operation, and, while he recognizes a progressive movement in the world as it now is, yet he looks for an eventual disintegration, thus reading, as it were, the inherent destiny of the universe in the merely mechanical cycle of becoming and dissolution. Mention may also be made of the Darwinian theory, in so far as it traces biological phenomena—progress as well as degeneration—to merely mechanical causes, though the actual progress ought to be something more than blind necessity. We may also instance J. S. Mill, who discards the idea of a God at once almighty and morally good, and regards it as most probable that there exists a Superior Being whose purposes of good are constantly thwarted by a hostile necessity—a theory analogous to that of Parsiism, though Mill's representation of the antagonistic power remains quite indefinite. Parallels to these views likewise appear in Germany, *e.g.* in the 'Evangelium der armen Seele.' Again, as a result of the present bias of philosophy towards psychology, with its consequent repudiation of the Ego and the Ego's independent action, and its tendency to explain everything by a psychical mechanism, this mechanism itself has become a kind of Fate, a necessity brooding over all. Finally, if we take as our starting-point the manifold misery of the world, and survey, from the eudæmonistic standpoint, the various forms of evil—the transitoriness of all things and the sufferings associated therewith—we can hardly wonder at the rise of a philosophy which emphasizes the irrationality of existence, traces it to the impulse of a blind Will, and regards the extinction of this Will as the final task of the race. True as it may be that there is, as von Hartmann admits, a relative rationality and purpose in the world, yet, according to the general theory, the world owes its existence to the persistent action of an unconscious volition, *i.e.* Chance, or to blind necessary impulse, the limits of whose action have not been clearly defined by von Hartmann, as there is nothing to show that the extinguished Will may not re-assert itself. In any case it is obvious that this Unconscious Will, as the source of all things, is simply a Fate, a Destiny which cannot be evaded till the Will is brought to extinction. Such is the latest prevalent theory of the universe.

III. *Analysis, Investigation, and Conclusion.*—From the above outline we see the wide diffusion of the belief in Fate among mankind, and the manifold forms it assumes; we see likewise that vestiges of the belief persist even where a radically different view of the universe prevails, and, further, that the idea is again in various shapes gaining a footing as a kind of reaction to the Christian view. Our survey, however, also indicates that fatalism takes root wherever men regard themselves as subject to an irresistible power thought of as incapable of rational or purposive action. Whether the all-controlling force is figured as immanent or as transcendent, whether it is regarded as a mechanical, physical, unconscious necessity, or is credited with a volition which, though conscious, is absolute and arbitrary in its working—in every case it is to be recognized as inevitable Fate. Fatalism cannot be overcome by the assumption of an omnipotent arbitrary Will represented as supramundane, any more than by a physical pantheism or pan-cosmism; nor is an antidote to it found in the ability to grasp the law of Causality or the order of Nature, so long, at all events, as these are reduced to a mere mechanical necessity enclasping us. Many an absurd superstition may doubtless be dissipated by a knowledge of the uniformity of Nature; but, if in the last resort this uniformity be construed as an aimless necessity enfolding all things, the cramping belief in Fate is not eliminated.

As a matter of fact, the belief can be finally extirpated only by the recognition of a rational Good Will determining the natural order with reference to an end, and harmonizing therewith the law of necessary physical causality. It is, of course, impossible to trace the purposive relations of every phenomenon in the world, and it might therefore appear as if, after all, there were a place for Fate in one or other of its forms. But our inability to trace such a universal purpose in detail does not justify us in denying its existence—so long as we have adequate grounds for admitting the presence of an order in the world as a whole. Moreover, the assumption of such a world-order can be made good only in so far as we abandon the empirical view of things, and recognize that the world is designed to move from one stage of progress to another, and that, in particular, the moral world is intended to consummate the process by means of individual effort upon a basis of Divine action. Considered in this light, every known imperfection in the world will but provide a motive for its own removal, while the knowledge of the contrast between the ideal and the actual, and the consequent perception of defect, furnish an opportunity for ameliorative action. The belief in Fate will, in fact, disappear only as men become convinced that the world has been rationally designed by a rational Will, and that it is their task, as morally endowed beings—as organs of the Divine Will conforming to the plan of Providence—to realize that design.

This brings us, however, face to face with the subjective conditions in which the belief in Fate subsists, and in which, again, its elimination is possible. So long as man feels himself simply impotent in relation to Nature, and thinks of himself as a mere atom in the universal order, he remains subject to Fate, to necessity. So long as he regards his position and his lot as something given, to which he must adapt himself, he cannot rise above the notion of Fate; nor is any deliverance possible, in spite of all attempts to improve his position, so long as he is disposed to eudæmonism, and, consequently, dependent upon circumstances or upon Nature. Eudæmonism, making pleasure the end of life, strikes at the springs of moral energy; it makes man the thrall of the things which promise enjoyment, and which Fate is supposed to bestow or deny. The man who, on the other hand, regards it as his task to realize a Divinely-ordained moral ideal will judge of all things in reference to their possible utility for that purpose. For such an one there exists no blind destiny, no arbitrary will, to paralyze his energy; for him all things are ordered by God with a view to their subserving his Divinely ordained ethical task; and, just because it is God who so orders the world, all thought of an aimless destiny or an arbitrary will is done away. For him no actual state of affairs is unalterably ordained, but every fresh situation is a call to a higher realization of the world's ethical purpose, for which, indeed, the mechanical uniformity of Nature provides the most effective means. For him, too, history acquires a new meaning, its larger canvas showing the progress of man to consist in the fulfilment of his peculiar function, and manifesting the sway, not of a blind destiny, but of Providence. Nor can the existence of evil falsify such a conviction, as the very fact that certain things are reckoned evil evinces the potency of the religious and moral reason which recognizes the ideal, this recognition being, in fact, the first step towards its practical realization. Evil is, there-

fore, no millstone, no incubus of Fate, weighing down the mind; on the contrary, in the very act of its being overcome it provides a motive for renewed effort and further progress. Of all religions it is Christianity alone which, when rightly interpreted, rings the knell of the belief in Fate.

A. DORNER.

FATE (Babylonian).—By the Babylonians and Assyrians the abstract conception of Fate or Destiny was never personified as a separate deity, whose nature and attributes might be cited as evidence in this connexion. But they possessed a special word for 'Fate' (*šimtu*), and it is desirable to establish as accurately as possible the senses in which the word was used. Apart from such direct evidence it is clear that in Bab. thought a conception of Fate or Destiny may have existed which was not peculiarly associated with the word *šimtu*, or at any rate may not have left its traces on the context of extant passages in which the word happens to occur. Our inquiry thus falls into two main sections. In the first we shall examine the use and precise meaning of the word *šimtu*, 'fate'; in the second it will be necessary to inquire whether at any period we may legitimately recognize traces of a fatalistic conception in Bab. popular beliefs or philosophical speculation. The latter inquiry will be the longer of the two, as it touches some points around which a considerable amount of controversy has gathered during recent years.

I. The word *šimtu*, pl. *šimâti*, derived from the verb *šâmu*, 'to establish,' 'to determine,' is the feminine of the participle *šimu*.[1] It properly has a passive meaning, 'established,' 'determined,' but in a few passages referring to the *šimtu* of some of the greater gods it is clearly used with an active meaning, in the sense of 'the act of determining the fate or lot.'[2] From the fact that in its passive sense the word is sometimes used as a synonym for 'death,' it might seem at first sight that death, and, consequently, the length of life were events which were decreed from the beginning. That care should be taken before drawing such a conclusion is suggested by a very interesting passage in the Cylinder-Inscription of Sennacherib, in which the premature death of Kudur-Nankhundi, king of Elam, is said to have taken place by the command of Ashur on a day which was not his *šimtu*, or pre-ordained fate.[1] From this passage it is clear that *šimtu* was not an irrevocable destiny, since, at any rate in Kudur-Nankhundi's case, it could be overridden by the special decree of Ashur, the national god of Assyria. By whom then was the *šimtu*, or 'fate,' determined, which could apparently be altered at will by the head of the pantheon? A study of the Bab. mythology enables us to answer the question with some degree of confidence.

In the legends the power of controlling the fates or destinies of all the gods, in other words, the various departments and sections of the universe, was symbolized by the possession of certain magical tablets, known as the *dupšimâti*, or 'Tablets of Fate.' In the Bab. Creation-legend, when the monster Tiâmat, after the defeat of her consort Apsû, appointed Kingu the leader of her host, she gave him the Tablets of Fate and laid them on his breast: the Tablets were not merely the symbol of authority, but in themselves conferred the power to rule. So, too, the first act of Marduk, after the conquest of Tiâmat and her host, was to take from Kingu the Fate-Tablets, seal them, and place them on his own breast.[2] It is clear that he did this in order to acquire the power inherent in the Tablets which Kingu had hitherto enjoyed. The magical character of the Tablets and the manner in which their mere possession conferred supreme power upon the holder are well illustrated by the legend of the storm-god Zû, which recounts how he stole them from their rightful owner, Enlil, the god of Nippur.[3] The privileges their possession conferred may be gathered from Zû's soliloquy when contemplating the theft:

> 'I will take the Fate-Tablets of the gods, and the oracles of all the gods will I direct; I will establish my throne and dispense commands; I will rule every one of the Spirits of Heaven!'

The legend relates how Zû waited for the dawn at the entrance of the hall where Enlil dwelt. And, while Enlil was pouring out the clear water for his morning ablution, Zû swooped down and seized the Fate-Tablets which Enlil had laid aside with his diadem and other insignia on the throne beside him. Zû made off with the Tablets to his inaccessible mountain, where he enjoyed the power they conferred until the Sun-god caught him in his net and recovered them for Enlil.

From these passages in the mythology it is clear that the ultimate arbiter of the fates of gods and men was the chief of the gods, and that he enjoyed his power by virtue of the Fate-Tablets which he possessed. But it is not to be inferred that the Fate-Tablets had any independent existence or any power apart from their possessor. It is also clear that they did not in any sense resemble a Book of Fate, for the whole future was not recorded unchangeably upon them: nor have we any evidence that the Divine holder of the Tablets recorded his decrees upon them from time to time. They appear to have been merely magical insignia, which enabled the god who held them actively to control and mould the course of events. The legends which have been recovered concerning them arose at a period when the Bab. pantheon was already in existence, and the owner of the Tablets, and hence the ultimate arbiter of Fate, was the head of the pantheon. Originally this god was Enlil of Nippur, who retains his early privilege in the legend of Zû; with the rise of Babylon to power Marduk usurps

[1] For references to the principal passages in which the word occurs, see F. Delitzsch, *Assyr. HWB*, Leipzig, 1896, p. 653 ff.; and Muss-Arnolt, *Concise Dict. of the Assyr. Language*, Berlin, 1905, pp. 1052 f., 1065 f.

[2] Such an expression, for instance, as *šimatka la šanân sekarka Anum*, 'Thy *šimtu* is without rival, thy word is (that of) Anu!' (Creation-series, Tabl. IV. line 4; cf. L. W. King, *Seven Tablets of Creation*, London, 1901, i. 58 f.), where *šimtu* is paralleled by *sekru* ('word,' 'command'), proves that the former could be used with an active meaning.

[1] The phrase is *ina ûm lâ šimtišu*; cf. Rawlinson, *WAI* i. (1861) pl. 41, col. v. line 2.

[2] Cf. King, *op. cit.* i. 20 f. and 74 f.

[3] Cf. E. J. H rper, *Beiträge zur Assyriologie*, ii. (Leipzig, 1894) 400 ff., 467 ff.

the attributes of Enlil, and in the Creation-series in its present form we are told how he became possessed of the Fate-Tablets. In Assyria, on the other hand, Ashur, the national god, inherited in turn the attributes of the supreme Bab. deity—among them the most important being the power to decree fate.

2. From an examination of the uses of the word *šimtu*, and of the legends which refer to the Fate-Tablets, it would seem that, at any rate in popular belief, the fates, both of the universe and of individual gods and men, were not believed to have been fixed from the beginning, but were pictured as in hourly process of development under the personal supervision of the supreme deity. It remains to inquire whether, apart from these legends and beliefs, we may trace evidence that the Babylonians of any period conceived of Fate as an impersonal and inexorable law. To answer this question it will be necessary to refer briefly to one aspect, the so-called 'Astral Theory,' of the Bab. religion, which was elaborated in Germany a few years ago and still retains a considerable following in that country. For upholders of the theory claim that belief in a fixed Fate or Destiny, both of the universe and of the individual, did enter largely into Bab. thought of all periods, including even the pre-historic age.

Perhaps the most characteristic feature of the theory is that, according to the Bab. conception of the universe, everything on earth was a copy of a heavenly prototype. It is well established that the Babylonians, like the Hebrews, conceived the universe as consisting of three parts—the heaven above, the earth beneath, and the waters under the earth. Winckler, the chief exponent of the astral theory, and his followers elaborate this conception of the universe, and would trace in the threefold division of the heavens a parallel to the earth. Thus they would divide the universe, according to their view of Bab. beliefs, into a heavenly and an earthly world, the latter's three divisions (the heaven being confined to the air or atmosphere immediately above the earth) corresponding to the northern heaven, the zodiac, and the southern heaven. The important point to note is that in these threefold subdivisions the zodiac and the earth occupy the second place and correspond to one another. Thus the movements of the sun, the moon, and the five great planets (which are visible to the naked eye) through the ecliptic constellations were held to have a peculiar connexion with events on earth. It is a fact that in the later Bab. period the greater gods were identified with the planets and the lesser gods with the fixed stars, each god having his special house or star in heaven in addition to his temple on earth. By analogy the astral theory assumes that everything on earth had its equivalent in heaven, lands and cities in addition to temples all having their cosmic counterparts. The movements of the stars were, according to the theory, related to events on earth much as a moving object seen in a mirror is related to its reflexion. Their movements were the cause of events on earth; but the movements themselves were not the arbitrary acts of independent deities. They took place in accordance with a cosmic law of harmony, inherent in the universe, and ordained from the beginning of creation. For a further mystical conception is ascribed by the astral mythologists to the Babylonians: that, as the part may be held to correspond in essence to the whole, so any single phenomenon of the universe was believed to reflect the whole in miniature. The course of the world-cycle, for example, was reflected in the struggle of the dual powers of Nature, in light and darkness, in summer and winter, in cold and heat. Moreover, as the succession of day and night may be held to correspond to the changes of the seasons, so the year itself corresponded to greater cycles of time, consisting, on the one hand, in ages of the world during the historic period, and, on the other, in æons of the world-cycle. Thus, according to these mystical doctrines, which are ascribed by the upholders of the astral theory to Babylonians of all periods, every occurrence in both the heavenly and the earthly halves of the universe may be said to have taken place in obedience to the symmetrical but inexorable laws of Fate or Destiny.

It would be out of place in the present article to do more than indicate briefly the false assumptions on which this theory rests. Most theories of interpretation have some historical basis to rest upon, and in making generalizations of this magnitude it is usual to support them by reference to texts of ascertained date. It is characteristic of the representatives of the astral school to do without such aids. Since the inscriptions which have actually been recovered do not in themselves furnish the necessary support for their thesis, they plant the roots of their theory in a purely imaginary age where evidence for or against it is *ex hypothesi* lacking. Thus the oldest monuments that have been recovered upon Bab. sites are not regarded by them as relics of the early stages of Bab. culture. It is assumed that in the periods behind them there existed a most elaborate and highly developed civilization, described as pre-historic and lying back in the darkness beyond the earliest existing records. In the total absence of material evidence it is no difficult task to paint this age in colours which are shared by no other early or primitive race in the world's history. It is assumed that war and violence had no existence in this pre-historic time. Intellect dominated and controlled the passions of this primeval but highly gifted people, and, in particular, one form of intellectual conception, based on a scientific knowledge of astronomy. It is postulated that a purely astronomical theory or conception of the universe lay at the root of their civilization and governed their whole thought and conduct; and this was no secret teaching of a priesthood, but a universally held belief which permeated every branch of the national and individual life. These doctrines in their perfect state perished with the other relics of their supposed pre-historic inventors. But they were inherited by the Semitic immigrants into Babylonia; and, though employed by them in altered and corrupted forms, have, it is said, left their traces in the cuneiform inscriptions. In this way the astral mythologist attempts to explain the unsatisfactory character of his evidence, from which he claims to be able to reconstruct the original beliefs in their entirety. So involved are they in the conception of an inexorable Fate or Destiny of the universe that, according to the upholders of the astral theory, the earliest Babylonians claimed to be in a position to foretell the future in its broader aspects. For it is asserted that they believed themselves able, by a mystical application of a remarkably accurate knowledge of astronomy, not only to disclose the origin of the world from its birth, but also to foretell its renewal in future æons.

To find evidence for their theory the astral mythologists are naturally obliged to rely on texts which have come down to us from the historic period. Assuming the close correspondence between the zodiac and the earth in early Bab. thought (an assumption to which reference has already been made), it is argued that the Babylonians divided the course of the world's history into Ages according to the particular sign of the zodiac in which the sun stood each year at the vernal equinox. This is a most vital point of the theory, and it postulates on the part of the early Babylonians a highly accurate knowledge of astronomy; it assumes a knowledge on their part of the precession of the equinoxes, which could be based only on a very rigid system of astronomical observation and record. The course of Bab. history, from the pre-historic period onwards, was thus divided, according to the theory, into three Ages—those of the Twins, the Bull, and the Ram—according to the sign of the zodiac in which the sun stood at the vernal equinox. Certain myths are supposed to have characterized each of these Ages, not only affecting religious beliefs, but so impregnating Bab. thought that they even influenced historical writings. As the sun at the vernal equinox gradually progressed through the great ecliptic constellations, so, according to the theory, the history of the world was believed to be evolved in harmony with its course, and the pre-ordained Fate of the universe was slowly unrolled.

It will be unnecessary to point out in detail the arbitrary and fanciful system of interpretation which the astral mythologist is forced to apply to his texts in order to make them fit his theory. It

will suffice to summarize the damaging criticism which the theory has sustained at the hands of an astronomer,[1] by which its supposed astronomical basis has been completely demolished. In the first place, it may be noted that there is no evidence that even the later Babylonians had a sufficiently accurate system of measuring the heavens to enable them to arrive at a knowledge of the precession of the equinoxes. But in complete independence of this fact, and assuming such a knowledge on the part of the Babylonians of all ages, Kugler has shown that the inferences elaborated from the assumption by Winckler and his school do not follow. It is well known that the different ecliptic constellations which make up the signs of the zodiac do not each occupy thirty degrees of the ecliptic, but that some are longer and some shorter. Also the constellations of the Bab. astronomers during the late periods do not completely coincide with ours. For instance, the most eastern star of our constellation Virgo was counted by the Babylonians of the Arsacid era as belonging to the next ecliptic constellation, Leo, since it was known as 'the hind foot of the lion.' But, fortunately for our purpose, not much doubt can exist as to the eastern limit of the Twins and the western limit of the Ram, which mark the beginning and end of the three World-Ages of the astral mythologists; for the two bright stars, Castor and Pollux, from which the Twins receive their name, were undoubtedly reckoned in that constellation by the Babylonians, and the easternmost star of our constellation of the Fishes (*a Piscium*) was probably well beyond the Bab. constellation of the Ram. Working on this assumption, and assigning thirty degrees to each of the three intervening constellations, Kugler has calculated the years in which the sun entered these signs of the zodiac at the vernal equinox. He is consequently able to state accurately the years in which Winckler's World-Ages would have begun and ended, and his figures entirely dispose of all Winckler's claims to an astronomical basis for his astral system. The Age of the Twins, instead of ending, as Winckler and his followers hold, about 2800 B.C., really ended in the year 4383 B.C. Thus the Age of the Bull began fifteen hundred years before the birth of Sargon I., who is supposed to have inaugurated its beginning, and it ended considerably before the birth of Ḫammurabi, under whom, we are told, the Bull-Age *motifs* were principally developed. Moreover, from the time of the 1st dynasty of Babylon onwards, down to the year 81 B.C., that is to say, during the whole course of her history, Babylon was really living in the Age of the Ram, not in that of the Bull. In short, all the *motifs* and myths which have been so confidently and with such ingenuity connected by the astral mythologists with the Bull sign of the zodiac, ought really to have been connected with the Ram. But even the astral mythologists admit that there is not a trace of a Ram *motif* in the Bab. mythology.[2] Granting all Winckler's assumptions with regard to the astronomical knowledge of the Babylonians, the theory is found not to stand investigation: his astronomy is at fault, and his three astrological World-Ages do not really correspond with his periods of history. It follows that the Babylonians did not divide the history of the world into astral Ages, and all grounds for the further assumption as to their conception at an early period of a world-cycle, evolved through a succession of æons, in accordance with an inexorable Fate or Destiny, are thus removed.

It remains to inquire whether in the later periods of Babylonian history we may not recognize a fatalistic conception in priestly, as opposed to popular, belief. The evidence of Diodorus, Philo of Alexandria, and other writers may certainly be cited in favour of ascribing to the later Chaldæan priesthood the teaching of a religious and cosmic system closely associated with the idea of an impersonal Fate or Destiny. But their evidence is certainly not applicable to any period earlier than the Seleucid era, where it is impossible to separate the nucleus of native tradition from the essentially different form it assumed under Hellenic influence. It is certain that the gradual advance in the Babylonian knowledge of astronomy from the 8th cent. B.C. onwards prepared the way, in the Achæmenian period, for the recognition of law in the heavens as opposed to the earlier conception of a universe under the arbitrary rule of personal deities swayed by human passions. But it is doubtful whether the Babylonian astrologers themselves ever evolved a conception of Destiny, as existing apart from the gods, except under the direct influence of Greek speculation.

To sum up the results of our inquiry: it is probable that at no period much earlier than the Seleucid era had the Babylonians any conception of Fate or Destiny as a blind, impersonal, and inexorable law, whether as applied to the universe or to the individual. In their belief the fate, whether of a man or of a country (which was usually the limit of their speculation), was not irrevocably fixed, but was in continual process of development, under the supervision of the most powerful deity known to them at the time. In the earliest period the city-god was for his worshippers the unchallenged arbiter of fate; but, with the growth of a federation of cities and the accompanying development of a pantheon, his place was naturally taken by the head of the pantheon—at first Enlil of Nippur, but afterwards Marduk of Babylon; and in Assyria, Ashur, the national god. Before the Hellenistic period, Fate was never dissociated in Babylonian belief from the personal direction of the gods, and, when once it had been decreed, it was still capable, in extreme and exceptional cases, of modification.

LITERATURE.—For collections of passages from the inscriptions in which the Bab. word for 'Fate' occurs, see the references cited on p. 778ᵃ, n. 1; and for passages bearing on the subject in the Bab. mythology, see p. 778ᵇ, notes 2 and 3. The best and most detailed criticism of the so-called 'astral theory' of the Babylonian religion is Kugler's *Im Bannkreis Babels*; and for scientific information on Bab. knowledge of astronomy, see the other works cited on p. 780ᵃ, n. 1.

LEONARD W. KING.

FATE (Buddhist).

FATE (Buddhist).—To Oriental thought in general, and more especially to a mind trained in Buddhist doctrine and possessed by the teaching and preconceptions of Buddhist ethics, the idea of Destiny or Fate presents itself in an entirely different aspect from that to which Greek mythology or philosophy has given currency in the West.

[1] See F. X. Kugler, *Im Bannkreis Babels*, Münster, 1910. Cf. also C. Bezold, 'Astronomie Himmelsschau und Astrallehre bei den Babyloniern' (*Sitzungsberichte der Heidelberger Akademie der Wissenschaften*, 1911, Abh. 2). For a scientific survey of the astronomical knowledge of the Babylonians, see especially Kugler's *Sternkunde und Sterndienst in Babel*, Münster, 1907–1912; and cf. also his *Die babylonische Mondrechnung*, Freiburg im Br. 1900, and Ernst Weidner, *Beiträge zur babylonischen Astronomie* (= *Beiträge zur Assyriologie*, viii. 4, Leipzig, 1911). Jastrow's *Die Religion Babyloniens und Assyriens*, ii. 415–748 (Giessen, 1909–1911), contains a detailed description of much of the astrological material.

[2] According to Winckler's system, the Age of the Ram did not start till about the 8th cent. B.C., being inaugurated by a fresh revision of the calendar under Nabonassar. But no amount of ingenuity can discover material for a Ram *motif* at Babylon. The nearest approach to one is found in the Libyan desert: Jupiter Ammon is represented with the head of a ram, and he is assumed to have been identical in his nature with Marduk. Thus the new reckoning is supposed to have passed over to Egypt, while Babylon remained unaffected and continued to enjoy 'Bull *motifs*.' The only explanation put forward is that the Age of the Ram began at a time when the power of Babylon was on the decline. This example of constructive theorizing is quite typical of the ease with which the astral mythologist is capable of clearing the most stupendous obstacles.

'Fate,' in the sense of an external compelling power, with universal sway and irresistible decrees, is a conception entirely alien to the fundamental principles of either of the great schools of Buddhist thought, and is opposed to the exhortations to personal effort and strife in order to win salvation which in the sacred books the Master is constantly represented as uttering. The disciple of the Hīnayāna works out his own deliverance by his own unaided toil and self-discipline; and, as none can help, so none can hinder in the great task. The kindlier and more liberal creed of the Mahāyāna puts at the disposal of the seeker after truth and rest supernatural and effective aid, whereby his feeble endeavours may be seconded and supported, and brought to certain fruition. In either case the issue of life depends ultimately upon the individual, the determining factor being his own will and moral purpose, and neither is the result foreordained nor is he himself the plaything or helpless victim of an omnipotent force which he can neither influence nor resist.

The place which Fate or Destiny occupies in the systems of Greek and European philosophy and theology is in the East taken by *karma* (*q.v.*). *Karma*, however, implying action with all its results or 'fruits,' so far from being an extraneous and all-compelling force which exercises over the course of human life an irresponsible control that cannot be gainsaid or resisted, is the self-caused and internal constraint of the deeds of the individual in his transient existences upon earth. He is himself his own fate, in that he receives now the due and deserved recompense for what he has himself done, be it good or evil. And his life proceeds, not on lines determined for him from above or from without, but on lines which he has himself marked out and continues to mark out with irrevocable certainty and exactness, as long as a life of fruitful activity is prolonged. Only when his actions cease to bear 'fruit' is the control broken, the power of *karma* rendered ineffective, and he himself set free. Between the conception of 'Fate,' therefore, as defined in the teaching of Greece and the West, and its Buddhist and Eastern counterpart, there is a profound difference as well as a substantial likeness. In both the power is absolute, dominant, and irresistible; its movement can neither be stayed nor turned aside. In the former, however, man has nothing to say to it; he can only bow his head and submit. Fate regulates the course and issue of all, and man can only make the best of his own hard case. According to the scheme of thought of the East, man orders his own destiny. Once determined, it is in each part and at each moment as rigorous and unbending as the most absolute pronouncement of the Fates. What is done cannot be undone; the effect remains, and must be realized in the form of reward or suffering in his own personal experience and life. He may, however, or rather he must, by his own actions and conduct determine what his future shall be. Its course and conditions are entirely laid down by himself. When these have been, as it were, prescribed, they have passed beyond his control and are unalterable and irrevocable. But the future is in his own hands. At each moment by his deeds he is shaping his own destiny. The moulding thereof for good or for evil rests entirely with himself. He ordains and directs his own fate, which is then inexorable and self-operative. All his life long he is under the dominion of *karma*, and cannot escape from its effects.

In a wider cosmical sense it may be said that the conception of Fate prevailed in Buddhism, inasmuch as Buddhist doctrine took over from Hinduism the conception of world-cycles, succeeding one another as the acts of an indefinitely prolonged drama of birth, florescence, decay, and death (cf. AGES OF THE WORLD [Buddhist]). From the Buddhist point of view, each cycle was characterized by the renewed preaching of the true doctrine, which was more or less widely accepted amongst men, ran its course, and then fell into neglect with the increasing prevalence of unbelief and wickedness, and finally disappeared. In each cycle a Buddha is born, who gains for himself illumination and perfect knowledge of the truth, which he then proclaims to the world. But the truth prevails only for a limited period, and is succeeded again by times of ignorance and darkness, dispelled in their turn by a fresh revelation. Thus Gautama, the Buddha of this age, has been preceded by an indefinite number of earlier Buddhas, who in succession taught the Law.[1] He himself prophesied of the end of the present cycle, which would be accompanied by the total disappearance of all knowledge of the truth; thereafter Maitreya, the Buddha of the coming age, would appear upon the earth, would attain to perfect insight and wisdom, and in due time would restore the true doctrine to mankind.[2]

The series of world-cycles, therefore, is independent of human will and endeavour, and so far corresponds to a conception of Fate, relentless and almost mechanical, with supreme and absolute control of the destinies of all, moving forward resistlessly to a predetermined end. The doctrine, however, is purely cosmical, and does not concern itself with the career or fate of the individual, except in so far as the latter may chance to have been born at an age propitious or otherwise for attending to the preaching of a Buddha. This last event, of course, the time and place of his birth within the cycle, like all the other circumstances and conditions of his life, is controlled by *karma*. His existence is comprised, as it were, within the world-scheme, as an item or element in its progress. But it contributes nothing to its determination, and cannot affect its course. The revolution of the ages, the rise and fall of the true teaching, the destruction and resuscitation of the universe, repeat themselves within assigned and unalterable limits, without cessation, and apparently without conceived or conceivable beginning or end.

It would appear, therefore, that from the Buddhist point of view Destiny or Fate, as it affects the individual, is practically equivalent to a theory of strict and determinate causation, the merit or demerit of his own actions resulting in a proportionate increase of freedom and happiness, or involving him in renewed tribulation and punishment. Moreover, both of the great schools, the Mahāyāna and the Hīnayāna, taught the possibility of deliverance or redemption from the power of *karma*, in the attainment of *nirvāṇa*, the state in which actions are performed without desire or 'clinging,' and therefore do not entail any resultant consequences which must be worked out in a renewed existence. In practice, especially in the Mahāyāna, *nirvāṇa* came to be equivalent to paradise or heaven; but it was originally attainable and attained here upon earth during the mundane life. And the broad difference between the doctrines of the two schools consisted in this, that in the endeavour to reach the goal, and to secure final release, the adherent of the Hīnayāna found himself dependent upon his own unaided exertions;

[1] Eighty-one of these, for example, are enumerated in the *Sukhāvatī-vyūha* 3, beginning with Dīpaṅkara, 'long ago in the past, in an innumerable and more than innumerable, enormous, immeasurable, and incomprehensible *kalpa* before now.' Elsewhere predecessors of Dīpaṅkara are named (*Jātaka*, i. 43). Gautama is said to have 'received recognition' from twenty-four of these.

[2] See art. BUDDHA, vol. ii. p. 885

no external aid was either available or possible, and in the most absolute sense of the term he must work out his own salvation. The Mahāyāna, on the contrary, conceived of a hierarchy of supernatural beings, the *Bodhisattvas* (*q.v.*), who were ever willing and able to bring help in the strife; by whose aid man might rise, when his own strength would fail. The entire cycle, however, of human existence, thus regulated in each individual instance by *karma*, was carried out and completed within the larger cosmical cycle, in which *karma* had no meaning or place. The latter proceeded in a fixed and determined order, through æons upon æons of time. It represented, upon the broadest possible scale, the Buddhist or rather Indian conception of a mechanical and all-controlling Destiny, to which the entire universe was subject, alike in its origin, its progress, and its dissolution.

A. S. GEDEN.

FATE (Celtic).—As among all imaginative and superstitious peoples, the belief in Destiny was strong among the Gaels. The whole of life was regarded by them as encompassed and ruled by an over-mastering Fate, from which there was no possibility of escape. In the older literature we find constant expression given to this belief.

'If it be here that I am fated to die, I have no power to shun it,' says Diarmaid in the tale of the 'Pursuit of Diarmaid and Oráinne.' 'It is profitless to fly from death; and, though I should avoid the battle, flight never yet saved a wretch,' says Congal before the fatal battle of Magh Rath (ed. O'Donovan, Irish Arch. Soc., Dublin, 1842). 'There are three periods of time that cannot be avoided—the hour of death, the hour of birth, and the hour of conception' (*ib.*). In an old poem attributed to St. Columba we get the same idea of the fixity of Fate:

'When once the fixed period of death arrives,
There is no fortress which can resist it; . . .
But the fortunate in life are protected
Even in the fore-front of a battle . . .
Whatever God has destined for a man
He leaves not the world until he meet it'
(ed. O'Donovan, *Miscel. Celtic Soc.*, Dublin, 1846).

In like manner, the Gaulish tribe of the Cadurci, when reduced to extremity by Cæsar, thought that what was happening was not by the act of man, but by the will of the gods (*de Bell. Gall.* viii. 43. 5).

Though this sense of fatality is as old as pagan times, it is probable that it has rather developed than been checked by Christian teaching. The passivity of mind and the inertia which mark the life of the Gaelic and Breton peasant arise largely out of this feeling that both the good and ill of life lie entirely outside of his control; his stoic acceptance of evil and death rests upon the same idea. The legends and folk-tales both of Brittany and of the Gaelic-speaking peoples are filled with the same overpowering sense of fatality. Connected with this are the omens of death or ill-luck which we find penetrating all Celtic literature, and which are universally believed in at the present day; and, again, the belief in lucky and unlucky days and hours. In the old medical treatises, the cross or unlucky days are set down in order, and in Christian times Biblical events were made to coincide with the days or hours of pagan observance. It was customary to consult a Druid or soothsayer as to the lucky moments for beginning a journey, battle, or other undertaking.

King Dathi requires his Druid to 'let him know his destiny and that of his country,' for a twelvemonth from that day (O'Curry, *MS Mat.*, Dublin, 1861, p. 284). Before the campaign of the Táin bó Cúalnge, the host were kept waiting a fortnight until a good omen was obtained (*Leabhar na hUidhre* [*LU*], 55*a*), and at the muster of the Hill of Slane or Slemain of Meath in this same story the onset is held back until the lucky moment of sunrise (*Leabhar Laignech*, or Book of Leinster [*LL*], 101*a*). Again, Cúchulainn was bound to be famous if he took arms on a particular day (*ib.* 64*b*); and a child, if not born before a certain day foretold by the Druids, would become a great king (S. H. O'Grady, *Silva Gadelica*, London, 1892, ii. 354). Lucky and unlucky days have great prominence given to them in the Coligny Calendar (J. Rhys, 'Celtæ and Galli,' in *Proc. of the British Academy*, London, 1905).

Regular horoscopes were drawn at critical moments in a chief's career (Battle of Magh Lena, ed. O'Curry for the Celtic Soc., 1855). Omens were obtained by means of various Druidical rites. Chief of these was *imbas forosnai*, or the 'knowledge which illumines,' which was gained through a magic sleep, and was associated with offerings to idols. The means of inducing this sleep of incantation is elaborately described in Cormac's *Glossary* (ed. Whitley Stokes, London, 1862, p. 94). Sometimes this knowledge seems to have been obtained by looking into a crystal. The prophetess Fedelm, who declares that she has knowledge of this art, is asked by Queen Medb to 'look for her' what will be the fate of her expedition. Then the maiden 'looked for it,' apparently into a ball or crystal (*LU* 55*b*). Another heathen method of divination was known as *teinm lœghda*, which enabled an inquirer to discover such matters as to whom the body of a headless corpse belonged (Cormac's *Glossary*, p. 130). Both these methods of divination are said to have been suppressed by St. Patrick, on account of the idol observances with which they were accompanied (*ib.* p. 94 f.; *Senchus Mór*, vol. i. [Dublin, 1868] pp. 24, 44), but he permitted the use of a means of foresight known as *dichetal dochennaib*, which was gained from some incantations made with the finger-tips, and was not accompanied by offerings to idols. Instruction in these arts formed part of the regular course of the fully-equipped *file*, or Druid of the higher ranks (cf. art. COMMUNION WITH DEITY [Celtic]). At times the decision as to who was to be elected king was reached by Druidical revelation gained in sleep, after a 'bull-feast' (*Bruighen dá Derga*, ed. Stokes, 1902, pp. 14, 15). The stone on which the kings of Ireland were crowned at Tara was called the *Lia Fáil*, or 'Stone of Destiny,' because it was believed to cry aloud when the rightful heir stepped upon it. In the before-mentioned poem, or 'Lorica,' attributed to St. Columba, several means of divination are mentioned as practised by Druids:

'Our destiny is not with the *sreod*,
Nor with the bird on the top of the twig,
Nor with the trunk of the gnarled tree,
Nor with a *sordan*, hand on hand . . .
I adore not the voice of birds,
Nor a *sreod*, nor a destiny, nor this earthly world,
Nor a son, nor chance, nor woman;
My Druid is Christ, the Son of God.'

In an old historical poem relating to the settlements of the Cruithne, or Irish Picts, in Alba (Scotland), among the kinds of divination taught by evil Druids and necromancers were:

'The honouring of *sredhs* and omens,
Choice of weather, lucky times,
The watching the voices of birds,
They practised without disguise . . .'
(Irish Nennius, ed. J. H. Todd, Irish Arch. Soc., 1848, p. 145).

The exact significance of some of these terms of divination is not known, but the word *sreod* is equated with *sén* or *séon*, 'good omen' or 'luck,' in various passages; and in MS Laud, 615, p. 7, we read: *ní h-ág sreoid atá mo chuid*, 'not for me is the luck of the *sreod*.' *Séona-saobha* means 'augury,' or 'sorcery'; and in *LL* 101*a* we read of the 'power of the *séon* and of the *solud*,' *nert don t- séon agus don solud*—evidently omens of good-fortune. A lucky moment is called *séon* in *LU* 55*a*, and *sén* in *LL* 64*a*. It is possible that the *sredh* or *sreod* may be connected with *sraod* or *sraoth*, 'sneezing'—a form of augury known in early times, and frequently condemned by

Synods. See, further, CELTS, vol. iii. p. 300, and DIVINATION (Celtic), vol. iv. p. 787.

The sense of Destiny surrounding each person of importance is expressed in the old tales by means of tabus (called in Irish *gessa* or *geasa*), usually laid on him at birth, and which, when his doom is about to overtake him, are broken through by him, one by one, against his own will, foreshadowing evil. Many of the Irish *gessa* were, no doubt, real tabus actually imposed upon kings and chiefs. We possess a complete tract giving the restrictions which had to be observed by the provincial kings of ancient Ireland (*Leabhar na g-ceart*, ed. O'Donovan for the Celtic Soc., Dublin, 1847, pp. 1–25); but they are used in the old romantic tales, with the definite poetic purpose of representing the unescapable decrees of Destiny. They have all the Greek sense of over-mastering Fate. They are usually, especially the birth-tabus, laid on the hero at birth; but any one seems to have had the power of inflicting them, and they appear to have been equally binding, however they were imposed.

In the story called 'The Tragical Fate of the Sons of Usnach,' the tabu of Fergus to refuse a feast resulted in the death of the three brothers; in the 'Pursuit of Diarmaid and Oráinne,' the death of the hero was due to his neglect of his tabu 'never to hunt a boar'; the breaking of the *gessa* laid upon the boy Conla by Cúchulainn resulted in the slaying of the son by his own father.

Elaborate *gessa* were laid on each of the chief heroes of the older, or Cúchulainn, cycle of tales (see CÚCHULAINN CYCLE), and it is in the gradual and inevitable breaking down of these *gessa* that the tragedy of their doom consists. The approaching end of each, and especially of the central figure of Cúchulainn himself, is surrounded by omens (cf. art. CELTS, in vol. iii. p. 300, § 6). In the Ossianic tales, especially the more recent of them, less stress is laid upon the breaking of tabus, but great prominence is given to the omens of sickness or death, such as the howling of dogs, clouds red like blood, and foreboding dreams (Trans. of the Ossianic Soc.). These signs are still regarded as sure forewarnings of a fatal catastrophe.

Another remnant of a very ancient superstition is the belief that 'banshees,' or female fairies (see DEMONS AND SPIRITS [Celtic]), foretold by their wailings near a house the death of an inmate. The banshee is usually the early pagan goddess of the district which she haunts, but she appears as a weeping woman, mournfully bewailing the expected death. Many families have their own special banshees who always appear before a death in the family. Sometimes, instead of the presiding genius of the country, some woman who has met an accidental death acts the part of the banshee, and is heard crying and moaning. There are examples of the appearances of banshees in the old historical literature.

Queen Aoibhill of Craig Liath, the presiding goddess of Clare and banshee of the Dalcassian race, appears to King Brian Borombe before the Battle of Clontarf to forewarn him of his death (*War of the Gaedhil with the Gaill*, ed. J. H. Todd, London, 1867, p. 201). The same goddess has been seen in recent times attended by twenty-five other banshees of Clare before an impending disaster.

In many of the ancient tales this forerunner of death takes the form either of a beautiful but weeping maiden or of a gruesome and monstrous hag, who is found in the path of a host going to battle, or of a chief who is doomed to death, stooping over a stream, washing and wringing bloody garments and weapons. She is called the 'washer of the Ford,' and she informs the doomed man or host that it is their own bloody garments that she is wringing out.

As late as 1318, Richard de Clare and his Norman troops met this hideous figure, 'washing armour and rich robes till the red gore churned and splashed through her hands,' when they were on their way to plunder the O'Deas of Dysert. She tells Richard that she is come to invite him to join her among the tribes of Hell. Next day Richard and his son and host lay dead upon the field near the fort of Dysert.

A similar superstition is that of the 'death's coach,' with headless driver and black or headless horses which, if it passes by a house or through a village, must not be stopped on its way. If it meets with any impediment or draws up at a door, some one is sure to die next day within the house. These beliefs are firmly held in all parts of Ireland, and many apparently authenticated cases are recorded of such events actually happening within recent times (*FL* iv. [1893] 352, x. [1899] 119, 122; T. C. Croker, *Fairy Legends*, London, 1870, p. 250). In Brittany the same superstition exists; the 'Coach of the Ankou' is driven by a figure who is the personification of death, imagined as tall and lean with long white hair, or as a skeleton whose head turns about every way inspecting the country. His coach resembles a funeral cart with tandem-horses, and be is escorted by two companions walking beside the cart, who open the gates of fields or the doors of houses and pile the dead upon the vehicle. The 'Ankou' is the last person who has died in each parish during the year, and is replaced at the end of twelve months by a successor (A. le Braz, *La Légende de la mort*, new ed., Paris, 1902, i. 95–99).

LITERATURE.—This has been given in the article. Cf. also the literature appended to art. DEMONS AND SPIRITS (Celtic).

ELEANOR HULL.

FATE (Chinese).—**1. Definition of the term.**—The Chinese equivalent for 'fate,' viz. *ming*, like the original of our English word, means primarily 'something spoken or decreed.' It is composed of the radical for 'mouth' and the symbol for 'law' or 'commandment,' the latter supplying the place of phonetic as well as supplementing the force of the radical. As *fatum* in philosophical language represents the eternal, immutable law of the gods, so *ming* is interpreted as the appointment of Heaven, the unalterable decree which determines man's lot; it is often used as synonymous with 'life'—regarded as the span of existence, whose limits are irrevocably fixed, so that a long *ming* is but another name for long life. To 'calculate the ming' is to forecast one's fortune. Owing to the fact that the term is sometimes applied in connexions which seem to admit of a variety of interpretations, some difference of opinion exists as to whether the Chinese should be described as fatalists, but it may be said without hesitation that the weight of evidence is in favour of such a description. It may be sufficient to note, with regard to the contrary view, that there are circumstances under which it may be possible, according to Chinese theories, to escape one's destiny, which might seem to imply that *ming* was not considered as invariable; but it will be found, on investigation, that in such cases apparent failure of the decree was of the nature of a deprivation of the gifts which Heaven had in store, in consequence of the unwillingness or unworthiness of the intended recipient to receive or retain them, rather than malfeasance on the part of Heaven. From this point of view it might seem that man is regarded as the potential master of his destiny, but, on the other hand, it must be borne in mind that, though he may fail to realize, or deliberately reject, the high position marked out for him by fate, he may by no means attain to a higher station than that which is destined for him.

2. Classical references.—In the Confucian classics the term *ming* frequently occurs, though, as we are informed, it was one of the subjects on which the Master was characteristically reticent. The word is sometimes qualified by the addition of 'Heaven,' *i.e.* 'Heaven's decree'; and sometimes 'Heaven'

alone stands for the *decree of Heaven*. The two terms are often found in apposition, as in the statement, 'Death and life have their determined appointment (*ming*), riches and honour depend upon Heaven.'

When a disciple named Po Niu was visited by Confucius, and found to be hopelessly ill, the Master said: 'It is the appointment (*ming*) of Heaven, alas!' The expression is frequently used with regard to the ancient rulers: 'Heaven decreed him the throne.' Again, we read of the 'superior man,' the Confucian ideal, as 'waiting, quietly and calmly, for the appointment of Heaven,' *i.e.* his destiny, in contrast with the 'inferior man' who 'walks in dangerous paths looking for luck.' In another passage Confucius says: 'Without recognizing the decree it is impossible to be a "superior man."' He frequently refers to destiny as influencing his own life, *e.g.*: 'Heaven produced the virtue that is in me'; 'At 50 I knew the decree of Heaven'; 'While Heaven does not let the cause of truth perish, what can the people of Kw'ang do to me?'; 'If my principles are to advance, it is so ordered; if they are to fall to the ground, it is so ordered (*ming*)'; 'Heaven is destroying me.'

From statements such as these it may be argued that, to the mind of the Sage, *ming* meant very much what we mean by destiny or fate: something which he recognized as actively operating in the determination of man's lot, but which he refused to discuss or analyze, regarding it, in common with spiritual beings and other extra-mundane phenomena, as beyond the pale of controversy.

3. Mencius.—The philosopher Mencius agrees with Confucius in regarding *ming* as Heaven's decree, in his references to the ancient 'Emperors' Yao and Shun; and quotes passages from the *Odes* to the effect that 'God, having passed the decree, caused the descendants of Shang to submit to the new dynasty of Chow.' When the prospect of obtaining preferment was suggested to him, he replied, in the words of Confucius: 'That shall be as Heaven directs.' He speaks of Heaven's gift of the kingdom to Shun, though he does not describe it as resulting from *destiny*, but rather as the demonstration of Heaven's will by Shun's personal character and achievements. His pronouncements on the subject are much looser than those of Confucius, since he speaks in one place of calamity and happiness as being in all cases of man's own seeking, and endeavours to illustrate his theory by a quotation from the *Odes*: 'Study always to be in harmony with the ordinances (*ming*), so you will certainly get for yourself much happiness'; and again, in a passage from the *Canon of History*: 'When Heaven sends down calamities, it is still possible to escape from them; when we occasion the calamities ourselves, it is not possible any longer to live.' There is a further explanation in a later phrase of his: 'That which is done without man's doing is from Heaven, that which happens without man's causing it to happen is from the ordinance (*ming*).' There is, therefore, a destiny decreed for every man, 'there is an appointment (*ming*) for everything,' and it is possible for each man to 'establish his destiny,' or fail to realize the favours which Heaven wills to bestow on him. An early and apparently untimely death may be ascribed to destiny, if encountered in the honourable discharge of one's duty; but a disgraceful death cannot be so attributed. Men should calmly await the fate which is decreed for them; but, should they place themselves in needless danger, they may entail upon themselves a 'fate' which is not of Heaven's appointment.

Destiny and Nature are closely associated in some passages of Mencius, and seem to reflect what is said in ch. i. of the *Doctrine of the Mean*: 'What Heaven has conferred (*ming*) is called Nature,' the idea being that Heaven has decreed an ideal destiny for man, and his success or failure in realizing that destiny represents the extent to which his nature is in harmony with the ideal. He may attain to the highest honours, if such are indicated to him by the understood will of Heaven, as in the case of the ancient rulers; or he may, like some of them, be condemned, by his own moral delinquency, to surrender the powers and dignities to which, humanly speaking, his former virtues entitled him. His ideal destiny may assign him a potential longevity, which he may reject by voluntary suicide. It is only when his nature is cultivated so as to correspond with the ideal that he can fulfil his ideal destiny. He discovers his destiny by performance of the eternal law of Right, and thus Mencius, when asked 'Did Heaven confer its appointment on Shun with specific injunctions?' replied 'No, Heaven does not speak, it simply showed its will by his personal actions and conduct of affairs.' By this means Shun was declared to be 'the man after God's own heart,' by the conferring of the Imperial dignity upon him.

The ideal destiny is limited or determined, in the sense that none can reach a higher standard than that appointed for him. In the case of some, that appointed limit may not permit him to rise above the lowest levels of human attainment; in other cases it may allow the happy recipient to secure the position of 'assessor with the Deity.' A recent pronouncement by a Confucian writer states that 'Confucius emphatically denies that all men may be made good' (Lim Boon Keng, in *China*, Jan. 1912, p. 515). Man may represent an early stage in the evolutionary process which, in course of time, may produce a sage; but, in his own person, he can have no hope of reaching that proud position, though he may rejoice in the privilege of advancing the process by strict attention to the limited sphere of his own responsibilities. He may, on the other hand, inherit a noble destiny, and not only fail to attain it, but by his failure retard the evolutionary process, and bring about a condition of atavism.

4. The Chucian school.—The reticence of Confucius with reference to *ming* gave his later expositors the opportunity of elaborating theories of their own; and their materializing tendencies are reflected in the *Doctrine of the Mean*, attributed to Tsze-sze, a grandson of Confucius, who was also, to a great extent, the inspirer of Mencius. A further development is observable in the writings of Chu-hsi (Chucius) (A.D. 1130–1200), who depraves Destiny by explaining it as meaning simply Nature, and Nature as equivalent to Principle, whether existing in the natures of men or beasts. In other words, men and beasts inherit their individual natures, which constitute each of them a law unto himself; but, since Nature, or Principle, may become deflected, an outside standard is necessary for correction of morals, viz. *Tao*, or 'the Way'; and *Kiao*, or 'instruction,' which is furnished by sages and teachers. It should be borne in mind that Chucius was largely influenced by Buddhistic opinions, and that the doctrine of *karma*, no doubt, affected his treatment of the subject; and, since Chucius is admitted to be the most popular exponent of the Confucian school at the present time, it is not surprising that the Chinese should be represented as thorough believers in fatalism. To the latter fact has been credited the universal traffic in astrology, fortune-telling, clairvoyance, mesmerism, necromancy, palmistry, physiognomy, the planchette, and the use of nostrums and charms, all with a view to discovering and influencing one's destiny. For, though the Chinese may sometimes appear to disclaim belief in a predestined and irrevocable fate, and express contempt for the methods by which an equivocal decree is supposed to be adjusted or evaded, it is evident, from many expressions in common use, that they are obsessed with the idea that an unalterable fate attends certain courses of action, and that the only way to

obviate that destiny is to refrain from entering upon such courses; and thus the ignorant masses, who cannot attain to that state of enlightenment where individual destiny is understood, flock to the charlatans who profess to lift the veil which hides the future, so that the inquirer may learn the fate which threatens him, and take steps to escape it.

5. Historical illustrations.—Chinese history, especially in its earlier periods, abounds in references to the Decree by which kings reigned, and which was unalterable so long as individuals and dynasties exhibited that congruity with the will of Heaven which justified their appointment and established their fortunes.

An early instance is supplied in connexion with the tripods of Yü (2205–2197 B.C.), of which it is said: 'Their weight depended upon the virtue of the man who endeavoured to lift them. If it was slight, they were heavy and immovable; but if great, they were as light as a feather.' These tripods were given, it was believed, 'by the direct interference of Heaven . . . and none could possess them except by its will.' Fu-kien, king of the State of Ts'in (4th cent. A.D.), said, with reference to the methods suggested for the repression of a suspected rebel, 'To whomsoever Heaven has decreed to give the kingdom, that man shall have it, and not all the wisdom or might of this world can prevent it.' In the following century Siau-tau, a military commander under Ming-ti, was generally regarded 'as a man whom Heaven seemed to have destined for a throne'; and the chronicles of the time show that, in spite of the machinations of the court against him, he ultimately succeeded in founding the dynasty of Ts'i, over which he ruled with the title of Kau ti. During an outbreak of plague in Shensi, at the end of the 6th cent., so great a condition of panic was created that the sick were utterly abandoned by their relatives through fear of infection, and confidence was not restored until Sin-kung, the local governor, having cared for the afflicted in his own residence, gave them back to their relatives when convalescent, with the words, 'Life and death are in the hands of Heaven. Why are you afraid of infection?' When the consort of Ta'i-tsung was about to die (A.D. 637), she heard that steps were being taken to secure the prolongation of her life by an appeal to Heaven, and, calling her son, the prime mover in the matter, to her bedside, said: 'Our life is in the hands of Heaven; and, when it decides that we shall die, there is no mortal power that can prolong it.' The Emperor Ta'i-tsung himself, at a later period (A.D. 645), in view of the disasters which menaced his throne, proposed a general massacre of the ladies of his *harim*, because it was prophesied that from amongst them a queen should arise who would exterminate the royal house of T'ang; but he was dissuaded from adopting such a course by Li-fung, who assured him that the coming events were ordained by Heaven, and that, though he might destroy every individual in the palace, it would raise up another to carry out its sovereign will. When Chang Shih-kieh, a faithful general of the Sung dynasty (A.D. 1280), was threatened with shipwreck, he refused to save himself by attempting to beach his ship, saying, 'When one Emperor perished, I set up another; he also has disappeared; and now to-day I meet this great storm; surely it must be the will of Heaven that the Sung dynasty should perish.' Noorhachu, the founder of the Manchu dynasty (A.D. 1616), assumed the name of Ti'en Ming = 'By decree of Heaven,' as his royal title on the establishment of the new dynasty.

6. Proverbial references.—The Chinese view with regard to the interposition of Destiny, as illustrated in the preceding, is confirmed by the everyday language of the people. 'All is Destiny' is a phrase which is constantly heard. 'Tum, tum, tum, life is fixed,' is a proverb which represents the strumming of the fortune-teller's guitar, and expresses the futility of man's efforts to change his lot. 'Nothing proceeds from the machinations of man, one's whole life is planned by Destiny,' conveys a similar lesson. Other common phrases thus express it:

'If it is your fate to gain wealth, you will at last possess it: if it is your fate not to have wealth, do not use violence to get it.' 'If fated to have sons, what matters it early or late?' 'A man's disease can be cured, but not his fate.' 'Ill-gotten gains will not enrich those whose fate it is to be poor.' 'Planning matters pertains to man, completing matters pertains to Heaven.' 'Man contrives, Heaven decrees,' *i.e.* 'Man proposes, Heaven disposes.' 'Heaven decrees happy unions,' *i.e.* 'Marriages are made in Heaven.' 'Everything depends on Heaven and Fate, and not on man.' 'All the plans of man are unequal to the one fixed determination of Heaven.'

7. Popular literature.—The doctrine of Fate in works of fiction is well illustrated in such selections from Chinese literature as *Strange Stories from a Chinese Studio* (see Lit. below); and the 'Book of Fate' is frequently referred to as being consulted in order to discover the terms of one's lease of life.

The inevitableness of Fate is tacitly accepted by the Chinese people, and finds constant illustration in their otherwise inexplicable carelessness in the control of fire, which sometimes devastates enormous areas; the neglect of proper precautions against flood, which has been known to inundate whole counties; and similar remissness in connexion with the outbreak of 'plague, pestilence, and famine,' or even personal afflictions, such as abnormal growths or deformities. The whole tendency of Taoism, which, though sadly depraved by its modern representatives, is, nevertheless, a powerful influence among the thinking classes, may well be described as fatalistic, inculcating, as it does, that absolute compliance with the *Tao*, or 'Course of Nature,' which precludes the stirrings of ambition, and deprecates all restless striving in the direction of self-advancement, whether by virtue of one's individual merits, or by sedulous attention to the desires of the higher or even the highest powers, including the gods themselves.

In conclusion, it may be said that, on this subject, as in the case of many others, the Chinese appear to be able to harmonize what might seem to Westerners to be conflicting and contradictory opinions. They express belief in an unalterable destiny, and yet speak of the possibility of evading that destiny, of a fate which is unaffected by outside agencies, whilst at the same time they seek by every means to anticipate the decree by recourse to horoscopes, fortune-tellers, etc. The explanation is supplied by the theory that the debased may surrender the good fortune in store for them, for Heaven has the right to annul a destiny which proves to be too good for its intended recipient. The ignorant may be unaware of the destiny which Heaven intends for them, and thus neglect to qualify for their predestined lot. Only complete sincerity can attain to the foreknowledge of Heaven's appointment: only he who fashions his life in accordance with 'the Way' can hope to gain the highest places which beneficent Heaven has to bestow. Death is unalterably fixed in the case of all men, and this belief gives rise to that extraordinary resignation with which the Chinese accept the death penalty; but one's lot in life is, to a large extent, in one's own hands; happiness may be secured, and calamity averted, by living in accordance with *Tao*, as set forth in the Confucian classics; for, as the proverb says, 'If Heaven should weary my body, I must set it off by putting my heart at ease.'

W. GILBERT WALSHE.

FATE (Egyptian).—The Egyptians had a very definite notion of Fate or Destiny, which was personified as the deity Shai. The word for 'destiny,' *šau*, later *šai* (*shai*), is derived from the verb *ša*, 'decide,' 'define,' the German *bestimmen*; *šai*, therefore, = 'was bestimmt ist,' as in the verse, 'Es ist bestimmt in Gottes Rath, Dass man vom Besten was man hat, Muss scheiden, ja scheiden'; *šai* = 'what *must* be,' unavoidable Fate. We find it in this sense always: even the heresy of Akhenaten did not deny Fate, and the word occurs in the inscriptions of his high priest Merir'a at el-Amarna (1370 B.C.). A prominent example of its use is in the inscription of Amasis describing the overthrow of Apries at Momemphis (560 B.C.):

'The land was traversed as by the blast of a tempest, destroying their ships [*i.e.* those of the Greek allies of Apries], abandoned by the crews. The [Egyptian] people accomplished their fate [that of the Greeks]; killing their prince [Apries] on his couch, when he had come to repose in his cabin.'

Naturally, unavoidable fate was regarded as evil fate, and *šai* can mean this without qualification. In the 'Israel-Stela' of Merenptah (1230 B.C.), which records the ravaging of Palestine by the Egyptians and the destruction of Israel, the word is 'determined' by the ideograph of a devouring dog: an evil animal was destiny!

Death was the destiny of all, whether the rich man who built himself a pyramid of granite, or the poor *fellaḥ meskīn* who died of heat and labour on the canal-dyke or *gisr*, with none but the fish to see him die. It was an evil destiny, death, and, when one thought upon it, one was disturbed, and tears came to the eyes; the very thought of death was pain and grief; never would one come back from the tomb to see the sun. So said his soul to 'Tired-of-Life' in the curious dialogue translated by Erman; but the man himself, seeking rest from the wickedness of the world, saw in death no evil fate, but rather a glorious one, since, when dead, he would become a 'living God,' who would accompany R'a in his sun-ship through the sky, all-seeing and all-knowing, and able to punish evildoers. So 'Tired-of-Life' rebuked his soul, and so the common fate of man appeared to the religious, then as now, rather a good than an evil destiny, and 'That-which-must-be' (*šai*) was deprived of his terrors. He ceased to be the Devourer, and became, instead, the Benefactor. Shai now appears, in late times, as a popular deity in the form of a serpent, the animal which had become the emblem or image of any and every deity otherwise unprovided with an animal-form. For religious reasons connected with the idea of death, as mentioned above, and for euonymous reasons too, no doubt, Destiny gradually comes to be regarded as a beneficent rather than a maleficent demon, and eventually in Roman times develops into the good angel of mankind and is translated into Greek as Ἀγαθοδαίμων. When the priests wanted to call the Emperor Antoninus Pius 'the good genius of Egypt,' they wrote *p-šai n Kemet*, which to their predecessors of a thousand years earlier could have meant nothing but 'the evil destiny of Egypt'! At Dendūr in Nubia the local god Petisis is similarly called *p-šai Enthūr*, 'the Ἀγαθοδαίμων (not the Μοῖρα) of Dendūr.' It is in his capacity of protecting dæmon that we find the serpent Shai, wearing the crowns of a Pharaoh and bearing the *caduceus* of Hermes and the *thyrsus* of Dionysos (a true type of the *Mischkunst* of the time), represented on either side of the inner doorway of the great family catacomb at Kom esh-Shuḳafa at Alexandria, which dates from the 2nd cent. A.D. In the 3rd cent. magical papyri we find Shai as the *agathodæmon*, the spirit of good rather than of bad luck: in a love-charm he is invoked as 'the great Shai who makes magic for the great (goddess) Triphis, the lady of Koou.' Triphis (*t-ripe(t)*), 'the princess,' was a form of Hathor, the goddess of love, who also from the earliest times had been connected with the idea of Fate: 'the seven Hathors' foretell the destiny of a child at its birth as early as the Vth dynasty. The name of Shai was now very popular in compound personal appellations: thus we find *Senpsaïs* ('Daughter of Shai'), *Tapsaïs* ('She who belongs to Shai'), *Petepsaïs* ('He whom Shai hath given'), and so forth. As the Good Spirit, he was now regarded as watching over the safety of the crops, and appears as a male counterpart of the corn-goddess Ermute (Thermuthis). Such is the history of an Egyptian godling. By this time the word *šai* had probably lost entirely its original signification of 'what is determined,' 'destiny unavoidable.' It does not occur in this sense in Coptic, in which ϣⲁⲩ (*šau*) means 'good,' 'pleasant,' 'proper,' thus preserving rather the altered and later agathodæmonic signification of the word.

LITERATURE.—On the derivation of the word *šai*, see H. Brugsch, *Hierogl. Wörterb.* Leipzig, 1867–82, Suppl. p. 1219; on the divinity, *Book of the Dead*, ch. cxxv.; *Book of Traversing Eternity* (ed. E. v. Bergmann, Vienna, 1877, l. 73, 46, n. 69); G. Steindorff, *ZÄ*, 1890, p. 51; and H. R. Hall, *PSBA* xxvii. (1905) 87–89, where references to inscriptions quoted are given, except that of Amasis (Daressy, *RT* xxii. 1 ff., tr. Hall from Daressy's Egyp. text in *Oldest Civilization of Greece*, 1901, appendix, p. 323 f.; J. H. Breasted, *Anc. Records*, Chicago, 1906–07, iv. 996 ff.) and the 'Dialogue of the Man Tired of Life with his Soul,' for which see A. Erman, 'Gespräch eines Lebensmüden mit seiner Seele,' *ABAW*, Tübingen, 1896. For Shai in the magical papyri, see F. Ll. Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 54; Griffith and Thompson, *Magical Papyrus of London*, London, 1909, p. 185. On the Hathors, see A. Erman, *Die Märchen des Papyrus Westcar*, Berlin, 1891.

H. R. HALL.

FATE (Greek and Roman).—Fate is the counterpart of Fortune (*q.v.*). They are two ways of looking at life; both are essentially connected with man. From the point of view of Fortune all is indeterminate; from the point of view of Fate all is determined. And Fate, like Fortune, attains to deity before our eyes during the course of Greek literature. From the first the idea of a predetermined order of destiny in the affairs of man was present to the mind of Hellas, and was fostered by the belief in oracles. 'Fatum a fando,' says Augustine (*de Civ. Dei*, v. 9). Fate is by derivation 'that which has been spoken,' with the implication that it shall be fulfilled. The nearest verbal equivalent to this in Greek is *τὸ χρεών*, since that is connected with the appropriate word for the answer of an oracle; cf. Eur. *Hipp.* 1256:

οὐδ' ἔστι μοίρας τοῦ χρεών τ' ἀπαλλαγή.[1]

But there is a great variety of ways in which the idea of Fate may be expressed in Greek: *e.g.* *αἶσα, αἴσιμον, αἴσιμον ἦμαρ, μοῖρα, μόρος, μόρσιμον, τὸ μόρσιμον, μόρσιμον ἦμαρ, αἰὼν μόρσιμος, μοιρίδιον ἆμαρ, εἵμαρται, εἵμαρτο, εἱμαρμένον, ἡ εἱμαρμένη, πέπρωται, πέπρωτο, πεπρωμένον, πεπρωμένη μοῖρα, ἡ πεπρωμένη, κήρ, κῆρες, δαίμων.*

1. **Homer.**—The idea of Fortune (*τύχη*), as Macrobius (*Sat.* v. 16) has pointed out, is unknown to Homer, but not so the idea of Fate. The latter is everywhere present both in the *Iliad* and in the *Odyssey*, though the three Fates as mythological persons are not yet to be found. Μοῖρα in Homer is always singular, except in *Il.* xxiv. 49:

τλητὸν γὰρ Μοῖραι θυμὸν θέσαν ἀνθρώποισιν.

Μοῖρα is the abstract noun from *μείρεσθαι*, so that the idea underlying it is that of some Power which apportions to man his destiny. We may conjecture that the same meaning attaches also to Αἶσα, which is used convertibly with Μοῖρα:

Il. vi. 487 f.: οὐ γάρ τίς μ' ὑπὲρ αἶσαν ἀνὴρ Ἄϊδι προϊάψει·
μοῖραν δ' οὔτινά φημι πεφυγμένον ἔμμεναι ἀνδρῶν.
Od. v. 113–115: οὐ γάρ οἱ τῇδ' αἶσα φίλων ἀπονόσφιν ὀλέσθαι,
ἀλλ' ἔτι οἱ μοῖρ' ἐστὶ φίλους τ' ἰδέειν καὶ ἱκέσθαι
οἶκον ἐς ὑψόροφον καὶ ἑὴν ἐς πατρίδα γαῖαν.

Αἴσιμον occurs in *Il.* xxi. 291:

ὡς οὔ τοι ποταμῷ γε δαμήμεναι αἴσιμόν ἐστιν,

and *αἴσιμον ἦμαρ* in *Il.* viii. 72, xxi. 100.[2]

Μόρος stands to Μοῖρα in the relation of effect to cause, and is therefore less liable to personification:

Il. xix. 421: εὖ νύ τοι οἶδα καὶ αὐτός, ὅ μοι μόρος ἐνθάδ' ὀλέσθαι.

An example of *μόρσιμον* is *Il.* v. 674 f.:

οὐδ' ἄρ' Ὀδυσσῆϊ μεγαλήτορι μόρσιμον ἦεν
ἴφθιμον Διὸς υἱὸν ἀποκτάμεν ὀξέϊ χαλκῷ,

and of *μόρσιμον ἦμαρ*, *Il.* xv. 613; *Od.* x. 175. *νῦν δέ με λευγαλέῳ θανάτῳ εἵμαρτο ἁλῶναι* occurs in *Il.* xxi. 281 and in *Od.* v. 312.

Πέπρωται and its cognates come from the root *πορ-*, which means 'provide,' and so convey the same idea as *μόρος* of something predetermined.

Il. xviii. 329: ἄμφω γὰρ πέπρωται ὁμοίην γαῖαν ἐρεῦσαι.
Il. iii. 308 f.: Ζεὺς μέν που τόγε οἶδε καὶ ἀθάνατοι θεοὶ ἄλλοι,
ὁπποτέρῳ θανάτοιο τέλος πεπρωμένον ἐστίν.

[1] Cf. *Herc. Fur.* 311; *Elect.* 1301; *Iph. Taur.* 1486; *Bac.* 515.
[2] Cf. oracle of Bacis, in Herod. ix. 43.

In *Il.* xvi. 441 f. (=xxii. 179 f.) *πεπρωμένον* is used of the victim of fate, meaning 'foredoomed'—

> ἄνδρα θνητὸν ἐόντα, πάλαι πεπρωμένον αἴσῃ
> ἂψ ἐθέλεις θανάτοιο δυσηχέος ἐξαναλῦσαι;

Κήρ and Κῆρες represent Fate on its sinister side, and so are generally associated with death.

Il. xxiii. 78 f.: ἀλλ' ἐμὲ μὲν κὴρ
ἀμφέχανε στυγερή, ἥπερ λάχε γεινόμενόν περ.
Il. xvi. 687: κῆρα κακὴν μέλανος θανάτοιο.
Il. ii. 834: κῆρες γὰρ ἄγον μέλανος θανάτοιο.
Od. xi. 171: τίς νύ σε κὴρ ἐδάμασσε τανηλεγέος θανάτοιο;

Hence *κήρ* is sometimes used simply in the sense of death, as in *Il.* i. 228, ii. 352, iii. 32—a sense in which it is personified in *Il.* xviii. 535:

> ἐν δ' Ἔρις, ἐν δὲ Κυδοιμὸς ὁμίλεον, ἐν δ' ὀλοὴ Κήρ.[1]

Δαίμων has affinities with both Fortune and Fate.

Od. x. 64: πῶς ἦλθες, Ὀδυσσεῦ; τίς τοι κακὸς ἔχραε δαίμων;
Od. xi. 61: ἆσέ με δαίμονος αἶσα κακὴ καὶ ἀθέσφατος οἶνος.

To derive it from *δαίειν* in the sense of 'divide,' 'distribute,' brings it into line with the conceptions already treated of.

In the *Iliad* there are a number of expressions, such as *ὑπὲρ μοῖραν* (xx. 336), *ὑπὲρ μόρον* (xx. 30, xxi. 517), *ὑπέρμορα* (ii. 155), *ὑπὲρ αἶσαν* (vi. 487, xvi. 780), *καὶ ὑπὲρ Διὸς αἶσαν* (xvii. 321), *καὶ ὑπὲρ θεόν* (xvii. 327), which seem to imply that man could on occasions overpass Fate. But except in xvi. 780—

> καὶ τότε δή ῥ' ὑπερ αἶσαν Ἀχαιοὶ φέρτεροι ἦσαν—

we are never told that he does overpass it. The rest of the passages are conditional, and some god always steps in in time to save the credit of Fate. The one passage, then, which runs counter to the rest may either be set down as hyperbolical or referred to the same range of thought as displays itself in the *Odyssey* (i. 32–36), where a sort of compromise is effected between Fate and free will. Some evils, we are led to suppose, come from the gods, whereas there are others which men bring upon themselves by their own infatuation—for instance, the death of Ægisthus. This is a sound judgment, to which common sense responds. There are sorrows against which no wisdom or virtue can guard, while there are others which are clearly traceable to one's own fault. But even in the *Iliad* the fatalism of the poet is not rigid, but admits of alternatives. Had Patroclus heeded the warning of Achilles, he would have escaped the evil fate (*κῆρα*) of black death (xvi. 685 ff.); and Achilles himself has an alternative destiny—death and immortal glory at Troy or an inglorious old age at home (ix. 410–416).

As men in the *Iliad* are often on the verge of transgressing Fate, so Zeus now and again entertains thoughts of setting it aside, but never actually does so. He sheds tears of blood over his own son Sarpedon (xvi. 431–461), but leaves him to his fate; he pities Hector, but does not save him (xxii. 168–185). The public opinion of the skies is against such an example. Fate is after all *Διὸς αἶσα*, and Zeus is true to himself. Even when he has been entrapped into an oath by Hera, he keeps it, though to his own cost (xix. 95–133). The general attitude of Zeus is shown by the impartial way in which he holds the scales of battle (viii. 69–74, xxii. 209–213), leaving the fates (*αἴσιμον ἦμαρ*) of the combatants to decide the matter by their own weight, the heavier to go down to Hades. Vergil has caught the Homeric spirit when he says (*Æn.* x. 112 f.):

> 'rex Juppiter omnibus idem.
> Fata viam invenient.'

It was the metaphor of spinning the web of destiny to men at their birth which brought into being the mythological persons called the *Μοῖραι*. But the gods in Homer do the work of Fate themselves. Zeus does the spinning in *Od.* iv. 207 f.:

> ᾧ τε Κρονίων
> ὄλβον ἐπικλώσῃ γαμέοντί τε γεινομένῳ τε.

More often it is done by the gods generally, as in *Il.* xxiv. 525 f.:

> ὡς γὰρ ἐπεκλώσαντο θεοὶ δειλοῖσι βροτοῖσιν
> ζώειν ἀχνυμένοις,

and in *Od.* i. 17, iii. 208, viii. 579, xi. 139, xx. 196. In *Od.* xvi. 64, however, the gods are relieved of the task by *δαίμων*:

> ὡς γάρ οἱ ἐπέκλωσεν τά γε δαίμων,

in *Il.* xx. 127 f. by *Αἶσα*:

> ὕστερον αὖτε τὰ πείσεται ἅσσα οἱ Αἶσα
> γεινομένῳ ἐπένησε λίνῳ, ὅτε μιν τέκε μήτηρ,

and in *Il.* xxiv. 209 f. by *Μοῖρα*:

> τῷ δ' ὥς ποθι Μοῖρα κραταιὴ
> γεινομένῳ ἐπένησε λίνῳ, ὅτε μιν τέκον αὐτή.

We have only to pluralize this in order to get the *Μοῖραι*, and towards this we are helped by *Od.* vii. 196 f.:

> ἔνθα δ' ἔπειτα
> πείσεται ἅσσα οἱ αἶσα κατὰ κλῶθές τε βαρεῖαι
> γεινομένω νήσαντο λίνῳ, ὅτε μιν τέκε μήτηρ.

So far then Homer has brought us. There are stern spinning-women who spin to men their destiny at birth.

2. Hesiod, etc.—By the time of Hesiod these stern spinsters have been supplied with the appropriate names of *Κλωθώ*, *Λάχεσις*, and *Ἄτροπος*, having reference severally to the thread of life, to allotment, and to inevitability. It is now definitely their function to dispense good and ill to mortals at their birth; cf. *Theog.* 218 f.:

> αἵτε βροτοῖσι
> γεινομένοισι διδοῦσιν ἔχειν ἀγαθόν τε κακόν τε.

Thus Zeus is relieved of the great responsibility which we find imposed upon him in *Il.* xxiv. 527–532.

As the Fates have now become persons, we expect to hear of their genealogy. But the accounts are conflicting. When they are first introduced to us in the *Theogony* (211–219), we are told that they are the daughters of Night without a father. But on a second mention (901–906) we learn that they are the daughters of Zeus and Themis, and held in the highest honour by their wise-counselled sire. Plato, who is a prose-poet, makes them daughters of Necessity (*Rep.* 617 C). Cicero (*de Nat. Deor.* iii. § 44), following 'the old genealogists,' makes Night the mother of the *Parcæ*, but supplies them with a father in Erebus. According to the Orphic theogony, as represented in Athenagoras (18 B), Clotho, Lachesis, and Atropos were daughters of Heaven and Earth, and sisters of the hundred-handed giants and of the Cyclopes.

Hesiod (*Theog.* 215–222) mentions the *Μοῖραι* in such close connexion with the *Κῆρες* that what is said of one may be intended to apply to the other. Now what is said of the *Κῆρες* would serve for a description of the Furies:

> αἵ τ' ἀνδρῶν τε θεῶν τε παραιβασίας ἐφέπουσαι
> οὐδέποτε λήγουσι θεαὶ δεινοῖο χόλοιο,
> πρίν γ' ἀπὸ τῷ δώωσι κακὴν ὄπιν, ὅς τις ἁμάρτῃ.

In this way a connexion might seem to be set up at starting between the Fates and the Furies; and it is worth noting that Pausanias (ii. 11. § 4) mentions incidentally how at Sicyon the same rites were paid to the Fates as to the Furies. There was a one day's festival every year with a sacrifice of sheep with young, a libation of mead, and flowers, but not garlands.

The fact that the Fates are essentially concerned with human life, and are naturally most prominent in connexion with its two great terms of birth and death, has led a modern writer (L. Schmidt) to the conjecture that there were at one time two Fates, not three—that Fate, in fact, passed through the numbers of singular, dual, and plural. But the passages from late authors by which this conjecture is supported do not seem to justify it. Thus Pausanias (x. 24. § 4) mentions that in the shrine at Delphi there stood two statues of *Μοῖραι*, but he immediately adds: 'and instead of the third of them there stood by them Zeus

[1] The line occurs also in Hes. *Sc.* 156 with *ἐθύνεον* for *ὁμίλεον*.

Moiragetes[1] and Apollo Moiragetes.' Again, in Plutarch (*Mor.* 474 B, *Tranq. An.* 15), where διτταί τινες . . . μοῖραι καὶ δαίμονες are spoken of, the context shows that the reference is not to the Fates proper at all, but to the Good and Evil Dæmon. The same author says (*Mor.* 385 C, *de ei apud Delph.* 2) that the two Fates at Delphi were intended to awake inquiry, since three were everywhere usual (πανταχοῦ τριῶν νομιζομένων). That the Fates should figure among birth-goddesses is only what might be expected. Pindar (*Ol.* vi. 71) couples the Μοῖραι with Eleutho (= Εἰλείθυια) at the birth of Iamus, and addresses Εἰλείθυια as 'assessor of the deep-minded Μοῖραι' (*Nem.* vii. 1), while Euripides bestows upon the Μοῖραι the epithet of λόχιαι (*Iph. Taur.* 206), and Plato in his poetical way speaks of Μοῖρα and Εἰλείθυια in the same breath (*Symp.* 206 D); an early poet of Delos, too, gave to Εἰλείθυια the epithet of εὔλινος, indicating thereby her identity with Fate (δῆλον ὡς τῇ Πεπρωμένῃ τὴν αὐτήν), and declared that she was older than Kronos (Paus. viii. 21. § 2).

Pindar has Μοῖρα in the singular (*Nem.* vii. 84) and in the plural (*Ol.* xi. 65, *Pyth.* iv. 259, *Isth.* v. 25); also θεοῦ Μοῖρα (*Ol.* ii. 37); he has two mentions of Clotho (*Ol.* i. 40, *Isth.* v. 25), one of Lachesis (*Ol.* vii. 118), but none of Atropos, though he speaks of 'Κλωθώ and her sister Μοῖραι'; he also enriches the vocabulary of Fate with some new expressions, such as αἰὼν μόρσιμος (*Ol.* ii. 20), μοιρίδιον ἆμαρ (*Pyth.* iv. 454), μόριμος υἱός (*Ol.* ii. 70, of Œdipus), and lays down broadly τό γε μόρσιμον οὐ παρφυκτόν (*Pyth.* xii. 52).

3. The Greek tragedians, etc.—This gnome might be taken as the key-note of Greek Tragedy. Quite apart from the curse of inherited sin, as in the house of Pelops, man is represented in the Tragedians as the victim of some awful, unseen power, which foredooms him to disaster. It has been said that there is less of this in Euripides than in Æschylus or Sophocles. But it is from the *Orestes* of Euripides (976–981) that we take the following lines:

> 'Ye tear-drown'd, toiling tribes,
> Whose life is but a span,
> Behold how Fate, or soon or late,
> Upsets the hopes of man!
> In sorrow still your changing state
> Must end as it began.'

'Pray not at all,' says the chorus in Sophocles' *Antigone* (1337 f.) to Creon, 'since there is no release for mortals from predestined calamity.' Greek Tragedy is believed by many to culminate in the *Œdipus Tyrannus*, and there, too, the idea of Fate attains its zenith. Œdipus is like a fly in a spider's web; the more he struggles to escape, the faster does Fate entangle him. 'Awful,' says Sophocles (*Ant.* 951), 'is the mysterious power of Fate.' It is perhaps a sense of this awfulness that makes the Tragedians, though they speak sometimes of 'Fates' in the plural, refrain from using the proper names of the goddesses. The thing with them is too serious for mythology. They were studying life as they found it, in the same spirit as that in which we study the laws of Nature.[2]

In the *Prometheus Vinctus* it is darkly hinted that Zeus himself is subject to Destiny, and that Prometheus knows a secret of Fate which will eventually effect his deliverance (511–525). In Æschylus the connexion between the Fates and the Furies comes out strongly. 'Who then,' asks the chorus, 'turns the rudder of Necessity?' to which the answer is (*ib.* 516):

> Μοῖραι τρίμορφοι μνήμονές τ' Ἐρινύες.

And again in the *Eumenides* (962) the Μοῖραι are addressed as ματροκασιγνῆται of the Furies—doubtless with reference to the account in Hesiod of both triplets being the unfathered offspring of Night. The metaphor from spinning, which is rare in the Tragedians, occurs in *Eumen.* 335 in connexion with Μοῖρα.

The belief in oracles is assailed by Euripides, though in such a way as to 'save the face' of Loxias.

> *El.* 399 f.: Λοξίου γὰρ ἔμπεδοι
> χρησμοί, βροτῶν δὲ μαντικὴν χαίρειν ἐῶ.

The logical tendency of this would be to upset the belief in Fate, which is so intimately connected with prediction. But, as a matter of fact, Euripides, like the other tragedians, is permeated through and through with a belief in Fate. Take, for instance,

> *Rhesus* 634 f.: οὐκ ἂν δύναιο τοῦ πεπρωμένου πλέον.
> τοῦτον δὲ πρὸς σῆς χειρὸς οὐ θέμις θανεῖν.
> *Herac.* 615: μόρσιμα δ' οὔτι φυγεῖν θέμις.
> *Herc. Fur.* 311: ὃ χρὴ γὰρ οὐδεὶς μὴ χρεὼν θήσει ποτέ.
> *Iph. Taur.* 1486: τὸ γὰρ χρεὼν σοῦ τε καὶ θεῶν κρατεῖ.

In Æschylus (*Prom. Vinc.* 936) and in the *Rhesus*, which the present writer believes to be the work of Euripides, a new power, bearing a close resemblance to Fate, makes its appearance upon the scene. This power is Ἀδράστεια. She is by some identified with Nemesis, in agreement with which it is the custom to propitiate her before dangerous utterances (Plato, *Rep.* 451 A; Eur. *Rh.* 342, 468), while others regard Adrasteia as another name for Atropos (Schol. ad Plato, *Rep.* 451 A), and the philosophers frankly identify her with Fate in general (Plato, *Phædr.* 248 C; Ar. *Mund.* vii. 5; Stob. *Ecl.* i. 188). According to Callisthenes (Strabo, xiii. 588), the name is due to the accident that the first statue of Nemesis was set up by Adrastus; but the more usual derivation is perhaps the true one, which takes the name to indicate the impossibility of escape from the goddess (ὅτιπερ οὐκ ἄν τις αὐτὴν ἀποδράσειεν, Schol. on *Rep.* 451 A).

Nemesis, herself a goddess of distribution (νεμ-), is akin to Μοῖρα (μερ-), and has at the same time affinities with Fortune, who has managed to appropriate her wheel (see FORTUNE [Gr.]). Herodotus, with his notion of 'a jealous god' (iii. 40), is full of the idea of some power which brings disaster upon men, not because they are wicked, but simply because they are fortunate, like Polycrates, or because, like Crœsus, they think themselves so (i. 34). In Herodotus (i. 91) we find a strong assertion of the omnipotence of Fate, where the Pythia declares to Crœsus that it is 'impossible even for a god to escape destiny' (τὴν πεπρωμένην μοῖραν ἀδύνατά ἐστι ἀποφυγέειν καὶ θεῷ). Yet, even so, there is a certain amount of elasticity allowed to Fate, for Loxias claims that he had induced the Μοῖραι to postpone the fall of Sardis for three years. How different is this theologian's acquaintance with the hand of God in history from the calm positivism of Thucydides! And how strongly does his ready belief in oracles (viii. 77, 96) stand contrasted with the sceptical remarks of the later historian (Thuc. ii. 54) as to the way in which predictions get accommodated to current events!

The phrase used by Demosthenes in a famous passage of the *de Corona* (p. 296, § 205)—τὸν τῆς εἱμαρμένης καὶ τὸν αὐτόματον θάνατον—indicates the same mental attitude as that of the author of the *Odyssey*, in distinguishing between things which are due to Destiny and those which come about through man's free agency: 'He who regards himself as born only for his parents,' says the orator, 'awaits his appointed and natural end,' whereas he who thinks that he is born also for his country will die rather than see her enslaved. Cicero, in an equally famous utterance (*Phil.* i. § 10), has an echo of this, or of the ὑπὲρ μόρον of the *Odyssey*

[1] On this title of Zeus, see Paus. v. 15. § 4, viii. 37. § 1. At Megara there was a statue, made partly by Phidias, with the Μοῖραι above the head of Zeus, on which Pausanias (i. 40. § 3) remarks: δῆλα δὲ πᾶσι τὴν πεπρωμένην μόνῳ οἱ πείθεσθαι.

[2] For this remark the writer is indebted to Professor E. A. Sonnenschein.

(i. 34 f.), where he says: 'Multa autem impendere videntur praeter naturam etiam praeterque fatum.' Vergil, too, has the same idea when he speaks of Dido's death (*Æn.* iv. 696):

'Nam quia nec fato merita nec morte peribat.'

In the view of all three writers there is a course of destiny, which may yet be infringed by man, either in the way of glorious self-sacrifice or of murder or suicide.

4. Roman writers.—The Romans add but little to the mythology of Fate. Their own birth-goddesses, of whom one was Parca, were identified under the generic name of *Parcæ* with the three Μοῖραι of the Greeks. Varro seems to be right for once in deriving Parca (Parica) from *pario*. The name Morta used by Livius Andronicus in his *Odyssey* must surely be connected with *mors*, which makes it look as though Cæsellius Vindex were right, as against his critic, Aulus Gellius, in taking Morta as the proper name of one Fate, not the generic name of all. Varro, however, gives the Roman names as Parca, Nona, and Decima, in which the allusion to birth is obvious (Aul. Gell. iii. 16, §§ 9–11). The threeness of the Roman goddesses may be due merely to their assimilation to the Μοῖραι.

The symbolism of spinning is used by Tibullus (I. viii. 1):

'Hunc cecinere diem Parcae fatalia nentes
Stamina, non ulli dissoluenda deo,'

by Propertius (IV. vii. 51):

'Iuro ego Fatorum nulli revolubile stamen,'

and by Ovid (*ad Liv.* 239 f.):

'Quondam ego tentavi Clothoque, duasque sorores,
Pollice quae certo pensa severa trahunt.'

It was reserved for the abundant genius of the last-named poet to contribute to poetic thought the following fine picture of the archives of Fate (*Met.* xv. 808–814):

'Intres licet ipsa Sororum
Tecta trium, cernes illic molimine vasto
Ex aere, et solido rerum tabularia ferro;
Quae neque concursum coeli, neque fulminis iram,
Nec metuunt ullas tuta atque aeterna ruinas.
Invenies illic incisa adamante perenni
Fata tui generis.'

5. The philosophers.—We turn now to the treatment of Fate by the philosophers, with whom the great name for it is ἡ εἱμαρμένη. Modern grammarians treat εἵμαρμαι as an irregular perfect of μείρομαι (=σέσμαρμαι); but to the ancient philosophers the word was suggestive rather of εἱρμός (='series'), as appears from their definitions.

Heraclitus, whose floruit is put at about 503 B.C., is reputed to have been the first to employ the term εἱμαρμένη. All things, we are told, took place, according to that philosopher, καθ' εἱμαρμένην.[1] It was further explained by him, if we may trust Stobæus (*Ecl.* i. 178), that the essence of Fate was Reason (λόγος), which pervaded the substance of the universe. Here we have the subsequent doctrine of the Stoics complete already, if it has not been read into the earlier thinker.

It is in his character of poet rather than as a philosopher that Plato speaks of Fate. Into the symbolism of the Vision of Er we need not enter further than to note that Lachesis is treated as the eldest of the Fates, since Lachesis stands for the past, Clotho for the present, and Atropos for the future (*Rep.* 617 C; cf. *Laws*, 960 C; in the Peripatetic *de Mundo*, Atropos stands for the past, and Lachesis for the future). Everywhere Plato takes for granted that there is a predetermined order of destiny, especially in relation to human affairs, without specifying by whom or what it has been determined.[2] In *Phædo* (115 A), Plato makes Socrates in his last moments allude playfully to the prominence of Fate in Tragedy—ἐμὲ δὲ νῦν ἤδη καλεῖ, φαίη ἂν ἀνὴρ τραγικός, ἡ εἱμαρμένη. In *Gorg.* (512 E) his language leads us to think that submission to Fate was a sentiment peculiarly prevalent among women—πιστεύσαντα ταῖς γυναιξὶν, ὅτι τὴν εἱμαρμένην οὐδ' ἂν εἷς ἐκφύγοι. In the bold myth of the *Politicus* he identifies εἱμαρμένη with the 'connatural desire' of the universe, when left by God to its own devices. This is a new light upon the subject altogether.

It is with the Stoics that the interest in Fate really begins. Heraclitus was before his time, and we do not know exactly what he said. Zeno identified Fate (εἱμαρμένη) with Providence (πρόνοια) and Nature (φύσις).[1] Chrysippus said that 'the essence of Fate is a spiritual power (δύναμιν πνευματικήν) arranging the whole in order.' He declared also that Fate is the reason of the universe.[2]

The unwary reader must not be deceived by Chrysippus' speaking of Fate as a 'spiritual' power. We mean by *spirit* something that is not matter; the Stoics meant by it something that is matter. Augustine uses *spiritus vitæ* to express 'spirit' in our sense[3]—that something, itself increate, which creates all things.

Posidonius made Fate third from Zeus, Nature being intermediate between them (Stob. *Ecl.* i. 178). Antipater said simply that Fate was God.

With regard to this last view, Augustine, who dislikes the word 'Fate' because of the connexion that had been established by his time between it and astrology, says, if any one means by Fate the will or power of God, 'sententiam teneat, linguam corrigat' (*de Civ. Dei*, v. 1).

Pope's 'Universal Prayer' is instinct with the spirit of Stoicism:

'Yet gave me in this dark estate
To see the good from ill;
And binding Nature fast in Fate,
Left free the human will.'

That is the position on which Epictetus is always insisting. God's will is certain to come about, whether we wish it or not. What is in our power is to make ourselves happy by a cheerful assent to it, or miserable by a futile resistance. There is no doubt that the Stoics held this position. How they made it good by argument it is not very easy to see. But Chrysippus, who was the brain of Stoicism, seems to have reasoned in this way. Everything has its antecedent causes; but we must distinguish between two kinds of causes: (1) those which are complete and primary, or, in one word, efficient; and (2) those which are adjuvant and proximate. If all causes were of the first kind, there would be no room anywhere for freedom; but, as some are of the second, there is. Sense cannot be stirred except by an object striking it; but the causes here are of the latter kind, and do not affect freedom. Assent lies with ourselves. If a man gives a kick to a cylindrical stone, he sets it rolling; but it goes on rolling because of its own nature. Bad minds, according to Chrysippus, rush into errors voluntarily; and it is part of the order of Fate that they should do so, as being a natural consequence of their badness (Cic. *de Fato*, §§ 41–43; Aul. Gell. vii. 2). This does not sound very satisfactory as a vindication of the freedom of the will. Cicero, who had the works of Chrysippus before him, and who was a good judge, did not think that he had made out his case. Neither did he think Epicurus successful, who, in order to leave room in the universe for free will, had recourse to the hypothesis of a slight deviation from the perpendicular on the part of single atoms.

Cicero himself, in his fragmentary *de Fato*, follows Carneades and the New Academy in denying Fate altogether. If there were no such thing as Fate, things would still happen as they do. Nature and Chance are enough to account for them. The

[1] Diog. Laert. ix. § 7: πάντα τε γίνεσθαι καθ' εἱμαρμένην. See frag. lxiii. in Bywater.

[2] The following are some of the passages in which the idea of Fate comes in: *Phædo*, 113 A; *Phædr.* 255 B; *Prot.* 320 D; *Rep.* 566 A; *Menex.* 243 E.

[1] Stob. *Ecl.* i. 178.

[2] εἱμαρμένη ἐστὶν ὁ τοῦ κόσμου λόγος (Stob. *Ecl.* i. 180).

[3] *de Civ. Dei*, v. 9: 'Nam et aër iste seu ventus, dicitur spiritus: sed quoniam corpus est, non est spiritus vitae.'

stone which fell in a cavern on the leg of a brigand Icadius (the reference is to a story told by Posidonius) would have fallen whether Icadius was there or not. But in this case, says Cicero, there is no Fate, because there is no prediction (*de Fato*, § 5)—a remark which brings us to the heart of the matter. For prediction is the stronghold of Fate. Free will is destroyed, says Cicero, if there be such a thing as divination (§ 11). This is an argument which has great power over many minds, but is nevertheless, fallacious. For present knowledge by another of a man's actions is no interference with his freedom. If, then, it be possible for a human being to transcend the conditions of time, and to project himself, or be projected, into the future, he may see what one is freely doing then, just as we see what others are freely doing now. Of course, it may be denied that this is possible; but it cannot be denied that, if it is possible, it renders prediction compatible with free will.

The Stoic belief in Fate as a continuous chain of causation is Determinism, not Fatalism. Fatalism is the belief that a definite event will take place, whatever happens—which is as much a denial of causation as is a theory of pure chance.

LITERATURE.—Cicero, *de Fato*; Stobæus, *Ecl.* i. 152–192; Aulus Gellius, VII. i. and ii.; L. Schmidt, art. 'Moira,' in Smith's *Dict. of Gr. and Rom. Biog. and Mythol.*, Lond. 1864–67.

ST. GEORGE STOCK.

FATE (Hindu).—The Skr. language has various equivalents for what we call fate, such as, *e.g.*, *kāla*, lit. 'time,' as leading to events the causes of which are imperceptible to the mind of man; *vidhi*, 'ordinance,' 'rule'; *daiva*, 'divine,' 'celestial,' 'divine power *or* will,' 'destiny,' 'fate,' 'chance'; *adṛṣṭa*, 'what is not seen,' *i.e.* that which is beyond the reach of observation or consciousness, the acts done by each soul in former bodies, which acts exert upon that soul an irresistible power called *adṛṣṭa*, because felt and not seen; *karman* (*karma*), work done in a former existence and leading to inevitable results, fate. *Kāla*, 'time,' is perhaps the earliest of these terms, occurring, as it does, in hymns of the *Atharvaveda* (xix. 53) on the power and Divine nature of Time, which is akin to Destiny or Divine Ordinance. 'It is he who drew forth the worlds and encompassed them. Being their father, he became their son. There is no other power superior to him.' In a subsequent period, Kāla was sometimes identified with Yama, the judge of the dead, or represented, together with Mṛtyu, 'Death,' as a follower of Yama, or invoked as one of the forms of the god Śiva. The *Mahābhārata*, the great epic of India, contains various tales tending to illustrate the relative importance of the various agencies of which Fate may be said to be composed, none perhaps finer than the apologue of the snake (xiii. 1), relating how a boy was killed by a snake, and the snake, after having been caught by a hunter, was released by the boy's mother on the ground of her loss being due to Fate alone.

First, the snake declares its innocence of the boy's death, Mṛtyu, the god of death, having used the snake as an instrument. Thereupon Mṛtyu himself makes his appearance and exonerates himself, asserting that Kāla, 'Time,' has in reality killed the boy. 'Guided by Kāla, I, O serpent, sent thee on this errand. All creatures, mobile or immobile, in heaven or earth, are pervaded by this same inspiration of Kāla. The whole universe is imbued with the same influence of Kāla.' But Kāla in his turn explains that neither Mṛtyu, nor the serpent, nor he himself is guilty of the death of any creature. 'The child has met with death as the result of its *karma* in the past. We all are subject to the influence of our respective *karma*. As men make from a lump of clay whatever they wish to make, even so do men attain to various results determined by *karma*. As light and shadow are related to each other, so are men related to *karma* through their own actions. Therefore, neither art thou, nor am I, nor is Mṛtyu, nor the serpent, nor this old Brahman lady, the cause of the child's death. He himself is the cause here.' On Kāla expounding the matter in this way, the child's mother became consoled, and asked the fowler to release the snake.

The conception of *karma* is closely connected with the celebrated Indian theory of transmigration or metempsychosis, which pervades all post-Vedic religious and philosophical systems of India, and has continued down to the present day to exercise a powerful sway over the popular mind. As observed by Burn (in *General Report of the Census of India*, Calcutta, 1903, p. 364), it is a mistake to suppose that the ordinary Hindu peasant has practically no belief in the doctrine of transmigration. 'The doctrine of Karma is one of the firmest beliefs of all classes of Hindus, and the fear that a man shall reap as he has sown is an appreciable element in the average morality.' It is only in S. India, according to Stuart (*ib.* p. 264), that the influence of Animism is prevalent, the villager's real worship being 'paid to Máriamman, the dread goddess of smallpox and cholera, and to the special goddess of the village'; and misfortunes are regarded as the work of evil spirits or devils who must be propitiated. In the same way, a native observer, G. Sarkar, in his well-known work, *Hindu Law*, points out that the doctrine of *adṛṣṭa*, the mysterious but irresistible power of the acts done in previous lives, is universally held by the Hindus as a fundamental article of faith.

'*Adṛṣṭa*, or the invisible dual force, is the resultant of all good and bad deeds, of all meritorious and demeritorious acts and omissions, done by a person in all past forms of existence and also in the present life, and it is this *adṛṣṭa* which determines the condition of every soul, *i.e.* is the cause of his happiness or misery; the state of a living being depends on his own past conduct' (G. Sarkar, *Hindu Law*[2], Calcutta, 1903, p. 230).

And so it is stated by Deussen in his *History of Philosophy* that the doctrine of metempsychosis has governed the Indian mind from the epoch of the Upaniṣads down to the present time, and is still of eminent practical importance, as affording a popular explanation of the cause of human suffering and operating as a spur to moral conduct. He quotes a blind Indian Paṇḍit, whom he met in his travels through India, as replying to a question put to him concerning the cause of his deficiency in vision, that it must be due to some fault committed by himself during a previous existence (Deussen, *Allgemeine Geschichte der Philosophie*, vol. i. pt. ii. p. 282).

Historically speaking, the belief in metempsychosis and the lasting effects of *karma*, or action, as determining the fate of man, makes its first appearance in one of the Brāhmaṇas, and, in a more developed form, in the Upaniṣads. These philosophical treatises preach a strict determinism, except in so far as a man, by recognizing his identity with the eternally free *Ātman*, may be released from the bondage of *karma*. The germs of this theory, as supposed by Oldenberg, may be much older; and it has been shown by Schrader, in his suggestive little book, *Die Indogermanen* (Leipzig, 1911, p. 148), that the earliest Indo-European conception of Fate is that of a share inherited from the mother at the time of birth; the Roman *Parcæ* (from *pario*), equally with the Greek Εἰλείθυιαι and the Slav. *Rozdanicy*, being Fate Mothers (*Schicksalsmütter*) assisting at every birth.

From Brāhmanism the theory of *karma* passed into Buddhism, and became one of Buddha's leading tenets.

'When a man dies, the khandhas [elements] of which he is constituted perish, but by the force of his Kamma [Karma] a new set of khandhas instantly starts into existence, and a new being appears in another world, who, though possessing different khandhas and a different form, is in reality identical with the man just passed away, because his Kamma is the same. Kamma, then, is the link that preserves the identity of a being through all the countless changes which it undergoes in its progress through Saṁsāra' (Childers, *Dict. of the Pali Lang.*, London, 1875, p. 198).

Jainism, the rival religion of Buddhism, agrees

in this respect with the latter. There existed in ancient times a large number of philosophical systems, belonging to two principal classes—one asserting the existence of free will, moral responsibility, and transmigration; and the other negativing the same. Both Jina and Buddha belonged to the former class. They believed in transmigration, the annihilation of which was the final aim which they had in view (Pischel). According to the Jaina doctrine, the deeds performed in the bodies by the souls are *karma*, merit, and sin. This drives them, when one body has passed away, into another whose quality depends on the character of the *karma*. Virtue leads to the heavens of the gods, or to birth among men in pure and noble races. Sin consigns the souls to the lower regions, sends them into the bodies of animals or plants, or even into masses of lifeless matter. The addition of new *karma* can be prevented by right faith, strict control of the senses, and austerities on which the Jainas lay special stress (Bühler).

Of modern Hindu sects, the Sikhs may perhaps be said to be the most fatalistic of all. They agree with the adherents of other systems in explaining the glaring difference between riches and poverty, honour and dishonour, by the acts in a former life determining the present condition and circumstances of a person. But they go very far in denying the liberty of human action, everything being subject to the decree of Fate, and the future lot of a person written on his forehead. These ideas have struck root very generally among the Sikhs, who, therefore, are far more rigid fatalists than even the Muhammadans. The *karma* theory occupies the same place in the Sikh religion as elsewhere, and the highest goal of the Sikh is not paradise, but the cessation of re-birth and existence (Trumpp, Macauliffe).

To return to Brāhmanism, it should be observed that the rigid determinism of its view of *karma* is frequently mitigated by admitting the modifying and controlling influence exercised on Fate by human exertion. Thus the Anuśāsana Parvan of the *Mahābhārata* contains the fine discourse on human effort (*puruṣakāra*), in which the relative importance of fate (*daiva*) and human acts is discussed.

'As, unsown with seed, the soil, though tilled, becomes fruitless, so, without individual exertion, Destiny is of no avail. One's own acts are like the soil, and Destiny (or the sum of one's acts in previous births) is compared to the seed. From the union of the soil and the seed doth the harvest grow. It is observed every day in the world that the doer reaps the fruit of his good and evil deeds. Happiness results from good deeds, and pain from evil ones. Acts, when done, always fructify, but, if not done, no fruit arises. By devoted application (or by austerity) one acquires beauty, fortune, and riches of various kinds. Everything can be secured by exertion, but nothing can be gained through Destiny (*daiva*) alone, by a man wanting in personal exertion' (*Mahābhārata*, XIII. vi. 7–12).

And so it is stated in the Vana Parvan that

'these persons in the world who believe in Destiny, and those again who believe in Chance, are both the worst among men. Those only that believe in the efficacy of acts are laudable. He that lies at ease, believing in Destiny alone, is soon destroyed like an unburnt earthen pot in water. So also he that believeth in Chance, *i.e.* sitteth inactive though capable of activity, liveth not long, for his life is one of weakness and helplessness' (*ib.* xxxii. 13–15).

It is also declared in the *Mahābhārata* that only eunuchs worship Fate (*daiva*). In other places, the paramount power of Destiny is upheld, and it is clear that the comparative weight of free will and fate must have furnished a fruitful theme for discussion to these Brāhman theorists.

The part played by Fate in the ordinary relations of human life, according to Hindu notions, may best be gathered perhaps from the view which the Indian jurists take of Fate or Chance (*daiva*). Thus, it is a well-known rule in Indian law that a depositary is not responsible for such damage as may have occurred to a chattel deposited with him by the act of Fate (*daiva*) or of the king, Fate being explained to include ravages caused by fire or water, the falling down of a wall, decay through the lapse of time, an attack by robbers or by inimical forces, and other events of a similar nature corresponding exactly to what is called *vis maior* in Roman law. If, therefore, a deposit should have been destroyed by the act of Fate or of the king, together with the depositary's own goods, he shall not be compelled to restore it. The same rule recurs in the recently discovered *Arthaśāstra*, in the 'Chapter on Deposits,' where it is ordained that a deposit shall not be reclaimed whenever forts or country parts are destroyed by enemies or hill tribes, or villages, caravans, or herds of cattle are attacked, or the whole kingdom destroyed; whenever extensive fires or floods bring about entire destruction of a village or partly destroy immoveable or even moveable properties, owing to the sudden spread of fire or rush of floods; and whenever a ship (laden with commodities) is either sunk or plundered by pirates. A loss caused by Fate is also not chargeable to a carrier transporting certain goods and losing part of them; or to a herdsman neglecting his cattle, after having been struck by lightning, bitten or killed by a snake, alligator, tiger, or other noxious animal, seized with disease, or the victim of an accident; or to one particular partner, when the property of the partnership has been injured through Fate or a gang of robbers, etc.

It is interesting also to examine the references to Fate in medical Sanskrit literature. Thus in Suśruta's system of medicine a certain class of diseases is attributed to the act of Fate (*daivabala*), as having been caused by Divine wrath, or by the mystic potencies of charms or spells, or by contagion. Sudden paroxysms of fever and sudden death or paralysis caused by lightning are quoted as instances of such diseases. There was, besides, a popular belief, originating in the doctrine of *karmapāka*, or ripening of acts, according to which certain aggravating diseases and infirmities were supposed to be due to some offence committed in a previous existence, leprosy, *e.g.*, being regarded as the result of a heinous crime perpetrated in a former life; blindness, dumbness, and lameness as being the consequence, respectively, of killing a cow, cursing a Brāhman, and stealing a horse; stinking breath as being caused by uttering calumnies; an incurable illness as due to injuring a person; epilepsy as the result of usurious practices, etc. This popular superstition was sanctioned by the medical writers of India, who seriously register crimes committed in a former existence among the regular causes of leprosy, and prescribe certain religious ceremonies among the remedies to be used for curing this disease. It is also believed that, when a person dies of leprosy, he will be affected with it in the next life, unless he performs a certain penance, consisting of abstinence for a day, shaving the whole hair of the head, and presenting a certain number of cowries and other articles to Brāhmans, who offer certain prayers, and to whom the person confesses his sins. This ceremony is performed before entering on the treatment of any supposed dangerous disease (T. A. Wise, *Commentary on the Hindu System of Medicine*, London, 1860, p. 258).

The notions of Sanskrit writers regarding the nature and working of Fate may be further illustrated by some miscellaneous sayings collected from their compositions.

'The accomplishment of an object is divided between Fate and exertion. Of these, the Fate is the manifestation of one's acts in former life. Some expect success from Fate, some from accident, some from the lapse of time, and some from effort. Men of genius believe in the efficacy of the combination of all these. As a chariot cannot be put into motion with a single wheel, so does Fate not succeed without exertion' (*Yājñavalkya-*

smṛti, i. 348–350, tr. Mandlik). 'Success in every enterprise depends on Destiny and human acts: the acts of Destiny are out of man's control. Think not on Destiny, but act thyself' (*Manusmṛti*, vii. 205, tr. M. Williams). 'Fate I consider paramount, human effort is futile. Everything is governed by Fate; Fate is the final resort' (*Rāmāyaṇa*, I. viii. 22). 'Fate binds a man with adamantine cords, and drags him upwards to the highest rank, or downward to the depths of misery' (*ib.* VII. xxxvii. 8, tr. M. Williams). 'Banish all thought of Destiny, and act with manly vigour, straining all thy nerve. When thou hast put forth all thy energy, the blame of failure will not rest with thee' (*Hitopadeśa*, Introd. 31, tr. M. Williams).

'What though we climb to Meru's peak, soar bird-like through the sky,
Grow rich by trade, or till the ground, or art and science ply,
Or vanquish all our earthly foes, we yield to Fate's decree,
Whate'er she nills can ne'er take place, whate'er she wills must be' (*Bhartṛhari*, tr. Tawney, Calcutta, 1877, p. 40).

'As a man puts on new clothes in this world, throwing away those which he formerly wore, even so the self of man puts on new bodies, which are in accordance with his acts in a former life' (*Viṣṇusmṛti*, xx. 50, tr. Jolly).

J. JOLLY.

FATE (Iranian).—The Gāthās attribute foreknowledge to Ahura Mazda (*Yasna* xxix. 4, xliv. 2, 6, 9–11, 13–19, xlviii. 2), which is also implied in the whole Iranian scheme of the Ages of the World (*q.v.*). Foreordination, however, scarcely developed in Zoroastrian thought, except in a minor infralapsarian sense, until a comparatively late period. Practically the only Avesta passage which is directly fatalistic in its teaching is *Vend.* v. 8, which states that a man apparently drowned is really carried away by demons, and that 'there, then, Fate is fulfilled, there it is completed' (*athra adhāṭ frajasaiti baxta adhāṭ nijasaiti*).

In genuine Zoroastrianism fatalism has no place, for the entire spirit generated by the long struggle which each man must help Ahura Mazda to wage against Ahriman and every other power of evil militates against a concept which—whatever its alleged justification—has, as a matter of history, sapped the energy of every people that has held it. And yet fatalism came to be an important doctrine of later Zoroastrianism. What was the source of this new factor — philosophical speculation, the malign influence of Babylonian astrology, the crushing of the national spirit by the foreign dominion under which the Zoroastrians passed, or a combination of all three—it is not easy to tell; yet there is at least a curious and suggestive analogy between the rise of fatalism in Iran and that of *karma* (*q.v.*) in India, which seems to have been evolved from a combination of philosophical speculation with the religious beliefs of the aborigines of India.

The *Dīnkarṭ* (iii. 77, tr. Sanjana, Bombay, 1874 ff., p. 85) teaches a qualified free will when it says:

'It is through the power and the assistance of the Ijaḍs (angels) that man knows the Holy Self-existent (Ahura Mazda), fights with the Darûjs (demons) and delivers his body and soul from them, and possesses the power of managing the other creation of this world. Under the design of the Creator, man is born, and has the power to direct himself, under the superintendence of the Ijaḍs. The abode (in man) of the evil qualities of the evil passions is for the purpose of obstructing heavenly wisdom and for contriving to plunge man into sin.'

Within the sphere of orthodox Zoroastrianism, fatalism comes to the front chiefly in two Pahlavi works—the 9th cent. *Dāṭistān-ī Dīnīk* (*DD*), and the *Dīnā-ī Maīnōg-ī Xraṭ* (*MX*) of uncertain date, but probably before the Arab conquest, and possibly in the reign of Chosroës I. (531–579 [*MX*, ed. Sanjana, Bombay, 1895, p. vii f.]). According to *DD* lxxi. 3–5,

'there are some things through destiny, and there are some through action; and it is thus fully decided by them [the high priests] that life, wife, and child, authority and wealth are through destiny, and the righteousness and wickedness of priesthood, warfare, and husbandry are through action. And this, too, is thus said by them, that that which is not destined for a man in the world does not happen; and that which is destined, be it owing to exertion, will come forward, be it through sinfulness or slothfulness, he is injured by it. That which will come forward owing to exertion is such as his who goes to a meeting of happiness, or the sickness of a mortal who, owing to sickness, dies early; and he who through sinfulness and slothfulness is thereby injured is such as he who would wed no wife, and is certain that no child of his is born, or such as he who gives his body unto slaughter, and life is injured by his living.'

Some colour is lent by *MX* viii. 17 to the view which the present writer, like Cumont (*Mysteries of Mithra*, tr. McCormack, Chicago, 1903, p. 124 f.), is inclined to favour, that Zoroastrian fatalism is borrowed, in the main, from Babylonian astrology, when it declares that 'every good and the reverse which happen to mankind, and also the other creatures, happen through the seven planets and the twelve constellations.' It is useless to strive against fate, for, according to *MX* xxiii. 5–9,

'when predestination as to virtue, or as to the reverse, comes forth, the wise becomes wanting in duty, and the astute in evil becomes intelligent; the faint-hearted becomes braver, and the braver becomes faint-hearted; the diligent becomes lazy, and the lazy acts diligently. Just as is predestined as to the matter, the cause enters into it, and thrusts out everything else.' In short, destiny (*baxt*) is 'predominant over every one and everything' (*MX* xlvii. 7; cf. also the polemic of Eznik, *Against the Sects*, tr. Schmid, Vienna, 1900, p. 121 ff.). There is, however, a sharp distinction in *MX* xxiv. 5–7 between destiny (*baxt*) and Divine providence (*bāk-baxt*); 'destiny is that which is ordained from the beginning, and Divine providence is that which they also grant otherwise,' and according to *Visp.* vii. 3 there is special Divine intervention (*baghō-baxta*) on behalf of Iranian warriors.

Yet it must be questioned whether the *MX* is, strictly speaking, orthodox, for in xxvii. 10 occur the significant words,

'The affairs of the world of every kind proceed through destiny (*breh*) and time (*damānak*) and the supreme decree of the self-existent eternity (*zōrvān*), the king and long-continuing lord.'

This is strongly suggestive of the Zarvanite heresy (on which see SECTS [Zoroastrian]), according to which both Ahura Mazda and Ahriman are sprung from Zrvan Akarana ('Boundless Time'), who is mentioned as a Divinity in the Avesta itself (*Yasna* lxxii. 10; *Nyāiš*, i. 8; *Vend.* xix. 13). That this belief existed long before the composition of the Pahlavi texts quoted above is shown by a citation from Theodore of Mopsuestia (*apud* Photius, *Bibl.* lxxxi.), on the authority of an Armenian chorepiscopus Mastubius, who regarded Zrvan as the author of all, and who called him Fate (Ζαρουάμ, ὃν ἀρχηγὸν πάντων εἰσάγει ὃν καὶ τύχην καλεῖ), while both the 5th cent. Armenian polemist Eznik (tr. Schmid, p. 119 ff.) and the Syraic writers (cf. Nöldeke, *Festgruss an Roth*, Stuttgart, 1893, pp. 34–38) make one of their main attacks on the Zoroastrian religion turn upon the fatalism of Zarvanism.[1] In similar fashion the Parsi *'Ulamā-i Islām* (tr. Vullers, *Fragmente über die Relig. des Zoroasters*, Bonn, 1831, pp. 44 f., 46) affirms that Time created Ahura Mazda, who created all good things, this being in direct opposition to the statement of Zāṭsparam (i. 24, tr. West, *SBE* v. 160) that Ahura Mazda was the creator of Time. The latter view is confirmed by a statement of a Persian *rivāyat* (ed. and tr. Spiegel, *Trad. Lit. der Parsen*, Vienna, 1860, p. 161 ff.), according to which Ahura Mazda also created Zrvan dareghō-x^{v}adhāta ('long, self-ordained Time'), who differs in many regards from Zrvan Akarana (Spiegel, *Erân. Alterthumskunde*, ii. 4 ff.).

The fatalism of the Zoroastrians also appears in the numerous prophecies of future events (cf., for example, *Yāṭkār-ī Zarīrān*, tr. Modi, Bombay, 1899, pp. 21 f., 29 f., where Jāmāsp prophesies to King Vištāspa the outcome of battle) and in the

[1] On the adoption of Zarvanism by Mithraism, see Cumont, *op. cit.* pp. 107, 148, and also his *Oriental Religions in Roman Paganism*, Eng. tr., Chicago, 1911, p. 150 f., where the co-operation of Bab. influence is again emphasized.

entire system of Persian divination (*q.v.*). In the Persian epic of the *Šāh-Nāmah* (tr. Mohl, Paris, 1876–1878) the power of Fate is also emphasized. Thus the Emperor of China declares (iii. 112) that 'no one will escape the rotation of heaven (*gardiš-i āsmān*), even though he were able to overthrow an elephant,' and the poet makes a similar reflexion on the violent death of Yazdagird I. (v. 419); but here, as de Harlez observes (*Avesta . . . trad.*, Paris, 1881, p. lxxxvii), we no longer move in a Zoroastrian sphere.

LOUIS H. GRAY.

FATE (Jewish).—Based on the OT, which on the whole acknowledges freedom of choice, Judaism does not, and consistently cannot, hold the pagan doctrine of Fate. The subject never entered Jewish consciousness, and therefore there is not even a Heb. word in the OT corresponding to μοῖρα or *fatum*. חֹק is an engraved statnte and hence a law of Nature, but not applied to human affairs. When, therefore, Josephus makes his countrymen state their theological differences in philosophical language and ascribes to the Pharisees a belief in a εἱμαρμένη (*Ant.* XVIII. i. 3), he does not mean by it an inflexible power to which gods and men must bow, but has in his mind the late Heb. word גְּזֵרָה (from גזר, 'to divide'; cf. μείρομαι from μέρος), generally גְּזַר דִּין, a decree of a judge or king, or Divine decision. Not fatalism but foreordination was the belief of Pharisaism.

The new term for God's foreordination was grafted on OT notions evolved from new ideas of God's Providence. The Bab. god Marduk held a solemn assembly of the gods on New Year's Day, when the lot was cast, the year's destiny settled, and Marduk seized anew the reins of government (A. Jeremias, *OT in the Light of the Ancient East*, Eng. tr. 1910, i. 59). It is probable that this largely influenced the Jewish observance of the autumnal New Year, and gave rise to the Pharisaic belief in a εἱμαρμένη. For on the first of Tishri, the agricultural New Year and Feast of Trumpets, the sole sovereignty of God is emphasized in the liturgy in a special manner. On that day God holds a court of justice in heaven, before which all mankind are arraigned. Satan is the accuser, and prayers and the sound of the trumpet ascending as a memorial (Lv 23^{24}) are the special pleaders. Three books are opened, wherein is inscribed the fate of each individual—one for the perfectly righteous, one for the perfectly wicked, and one for the mediocre; the first two are respectively sealed on that day for life and for death, the third is left open for forensic proceedings, merits and demerits being balanced during the penitential days, and is sealed on the Day of Atonement (*Rosh Hash.* 16*b* ff.). The usual salutation on New Year's Day is: 'May you be inscribed (on the Day of Atonement, 'May you be sealed') for a good year!' The *Musaph* prayers for the New Year say:

> 'On this day sentence is passed upon countries—which of them is to be destined to the sword and which to peace, which to famine and which to plenty; and every creature is visited therein, and recorded for life or for death. Who is not visited on such a day as this?'

Even the extent of man's sustenance is decreed in this session (*Beṣa*, 16*a*). The sentences, however, of this annual assize are not irrevocable. 'Repentance, Prayer, and Almsgiving rescind the evil decree' (Liturgy, and *Rosh Hash.* 16*b*). Hence a converted sinner can be said to annul the Divine *g'zar dîn* (*Mo'ed Ḳaṭ.* 16*b*), in so far that it is no longer applicable to him since he became another.

Man, then, remains master of his religious and moral destiny. 'Everything is in God's hands, except the fear of God' (*Ber.* 33; *Meg.* 25*a*). Good and evil are the issues of man's actions (*Deb. R.* iv.). He possesses the power to defile himself and to keep himself clean (*Yoma*, 39*a*). In *Mak.* 10*b* it is proved from the Law, the Prophets, and the Writings that one is guided on the way he desires to walk.

But, when God's Providence is spoken of, we meet in Jewish literature with sentiments expressive of determinism. It is possible that the Stoic philosophy lent a colouring to Jewish speculations on Divine Providence. We know that the ethics of Stoicism agree in many points with those of the Haggada, betraying some acquaintance, on the part of the Rabbis, with the tenets of that school. Strabo identifies Judaism with Stoicism (Reinach, *Textes d'auteurs grecs et romains relatifs au judaïsme*, Paris, 1895, pp. 11, 16, 99, 242). Ben Sira (17^7 15^{11-17}) asserts the freedom of human will in the manner of one attacking a contrary opinion. Josephus (*BJ* VI. i. 8, iv. 8) uses the word εἱμαρμένη as if he were a real fatalist. The repeated emphasis laid on Divine foreknowledge is a step in the direction of fatalism. Thus, in the above mentioned *Musaph* prayers for the New Year, God is spoken of as 'looking (צוֹפֶה) and beholding to the end of all generations.' A dictum of R. 'Aḳiba's was (*Ab.* iii. 19): 'Everything is foreseen (צָפוּי, equivalent to Josephus' ἐφορᾶν=*providere* [*BJ* II. viii. 14]),' although it is added: 'free will is given.' Man in his nature and environment is a product of a predetermined will. 'He is fashioned, born, lives, dies, and is brought to judgment against his will' (*Ab.* iv. 29). In his ante-natal state his sex, constitution, size, shape, appearance, social position, livelihood, and all that may befall him, are pre-ordained (*Tanḥ.* on Ex 38^{21}). Marriages are made in Heaven. Forty days before the birth of a child its future spouse is proclaimed by a herald (בַּת קוֹל), and no prayers can alter it (*Mo'ed Ḳ.* 18*b*; *Sanh.* 22*a*). Throughout his life his feet guide him whither he is destined to go (*Suk.* 55). The very wounding of a finger is previously proclaimed in heaven (*Ab. Zara*, 54). No one dies prematurely, although the plague may rage for seven years (*Sanh.* 29). His mental endowments are likewise prescribed. One has an aptitude for studying Haggada, another for Mishna, another for Gemara, and another for all three. Even the prophetic gift was bestowed in measure. One prophet was the author of two books, another of a chapter, and another of only one verse (*Yalkuṭ* on Job 9^{16}). 'By thine own name, says Ben 'Azai, will they call thee, in thy place will they seat thee, of thine own will they give thee. No one can touch anything that is destined for another. No kingdom can extend a hairbreadth against another' (*Yoma*, 38*a*).

History is shaped in accordance with a pre-ordained plan. Suffering, death, the Deluge, Israel's servitude in Egypt and persecution by Haman, were prescribed before creation (*Tanḥ.* on Ex 3^1). God revealed to Adam before he was completely formed his righteous descendants (*ib.*). To Moses He showed a list of 'every generation, its kings, guides, and prophets from the creation until the final resurrection of the dead' (*Midr. R.* on Ex 31). The leaders were to appear on the stage of time as they were wanted: *Uno avulso non deficit alter.* Thus, 'before Moses' sun set, Joshua's rose.' Similar was the case with Eli and Samuel. On the day R. 'Aḳiba was slain, Judah the Prince was born, and on the latter's death day Rab Ada bar Ahaba was born,' etc. (*Midr. R.* on Gn 23^1). Israel's election was decreed from all eternity, and is irrevocable. Their final redemption must be preceded by repentance.

Should they fail to repent at the appointed time, God will force it by raising up for them another tyrant like Haman (*Sanh.* 97*b*, 98*a*). The interference of miracles with the course of Nature, such as the dividing of the Red Sea at the Exodus, the solstice at Gibeon, the Jonah miracle, etc., was in accordance with a Divine 'stipulation' before creation (*Midr. R.* on Gn 1[9]).

How far foreordination was compatible with the doctrine of rewards and punishments was a frequent subject of discussion in the Talmudic period. But the Rabbis advanced no solution of the problem beyond the categorical statement that, notwithstanding, man possessed freedom of will. At most it was added that compliance with the law merited greater reward for the righteous and severer punishment for transgressors (*Shab.* 32*a*). The problem wrecked the faith of Elisha ben Abuyah. It was left to the Jewish philosophers of the Middle Ages to reconcile the doctrine of Divine foreknowledge with freedom of will. It being beyond the scope of this article to reproduce their arguments, we conclude that all, with perhaps the exception of Ḥasdai Crescas, rejected fatalism, pointing out that foreknowledge was not identical with causation.

A. E. SUFFRIN.

FATE (Muslim).—**1. General.**—Islām has often been charged with being a fatalistic religion, but this reproach is not quite merited. For a proper analysis of fatalism in Islām, it is important, in the first place, to distinguish between the popular point of view and the philosophical or theological. Eastern peoples have a psychological tendency to fatalism; but this species of popular fatalism, numerous traces of which are found in their folklore, is a sentiment rather than a doctrine. It is, moreover, limited to the outstanding accidents of human life, and especially to death, which it represents as happening of necessity at such and such a time and in such and such circumstances, no matter what one may do to avoid it; it is, we may say, a physical fatalism. The fatalism of the scholars is rather a moral fatalism; it does not apply specially to death, but refers to all human actions, holding these to be decreed by God. It is true that there have been scholars who taught fatalism in Islām, and that the books of Muslim theologians and the Qur'ān itself contain propositions apparently inculcating fatalism. At the same time, it must be remembered that the doctrine of fatalism has always been expressly repudiated by orthodox Islām, which believes in the free will of man, although it encounters serious difficulty in reconciling this with the all-powerful will of God. We now proceed to indicate briefly how the questions of predestination and free will are treated in the Qur'ān, among various philosophical sects, and among the people.

2. In the Qur'ān.—Muhammad speaks of books, kept in heaven, in which the deeds of men are written down, and which will be used as the basis of the Last Judgment. One of these books is called *'Illiyūn*: 'The book of the righteous is in 'Illiyūn' (Qur'ān, lxxxiii. 18 [*SBE* ix. 324]); another is called *Sijjīn*: 'The book of the wicked is in Sijjīn' (lxxxiii. 7 [*SBE*, *loc. cit.*]). Tradition has it that these books are eternal, though this is not indicated in the text of the Qur'ān; probably Muhammad thought the lists were written day by day as the deeds took place. There are also books relating to each individual:

'As for him who is given his book in his right hand [at the Last Judgment], he shall be reckoned with by an easy reckoning. . . . But as for him who is given his book behind his back, he shall call out for destruction, but he shall broil in a blaze!' (lxxxiv. 7-12).

Muhammad's idea seems to be that human actions are noted down in the books at the time they are performed. There is still another book, called the 'perspicuous Book,' relating to the whole world:

'Nor shall there escape from it the weight of an atom, in the heavens or in the earth, or even less than that, or greater, save in the perspicuous Book' (xxxiv. 3 [*SBE* ix. 150]).

According to tradition, this book is eternal; but the Qur'ān does not say so. In short, the relevant passages do not justify the popular expression 'It was written' (with 'from all eternity' understood).

While there is no text in the Qur'ān affirming that men's actions are decreed in advance by God, we find passages, on the other hand, which seem to signify that God forces certain men to do evil, that He predestines a certain number to hell; *e.g.* the following verses:

'Had we pleased we would have given to everything its guidance; but the sentence was due from me:—I will surely fill hell with the *jinn* and with men all together' (xxxii. 13). 'We have created for hell many of the *jinn* and of mankind: they have hearts and they discern not therewith; they have eyes and they see not therewith; they have ears and they hear not therewith; they are like cattle, nay, they go more astray! these it is who care not' (vii. 178). 'God leads astray whom He pleases, and guides whom He pleases' (xxxv. 9, etc.).

These passages are probably not to be taken quite literally. Muhammad in the Qur'ān does not speak with the precision of a teacher, but rather expresses himself as an orator, almost as a poet. His very emphatic terms were occasioned by the persistent stubbornness of his audience, and may mean only that God finally hardens the hearts of the wicked who have first scorned His favours. This is more clearly stated in ii. 17 (*SBE* vi. 3):

'Deafness, dumbness, blindness, and they shall not return!'

It will be noticed that the above passages are reminiscent of the Bible; Muhammad applies to the wicked what the Bible says of idols (Ps 115[5-7] 135[16f.]).

3. With the theologians.—It was not until philosophical studies began to flourish that the question of fatalism was thoroughly investigated in Islām. The attributes of God are enumerated; amongst them are specified knowledge, will, power. These Divine attributes must be absolute; what room is left then for the will and power of man? The philosophers knew God as universal agent and creator of all things. If God was the 'agent' of everything, how could man be the 'agent' also (and, so to speak, over and above) of his own actions? In God also they saw the supreme 'cause,' the cause of causes; how then could they admit that man was capable of performing deeds of which God was not the 'first cause'? Such were the philosophical forms in which the question was clothed.

God's will and knowledge, according to Muslim theologians, produce from all eternity a sort of decree which is realized by His power. This decree is called the *qadā*; its continual realization is the *qadar* (cf. Jurjānī, in the book of the *Ta'rīfāt*). Now, man, under this Divine decree, must be left enough liberty to give his life a moral significance; at the same time, the morally bad actions of wicked men must not be attributed to God. This was the problem which Muslim theology tried to solve, but we cannot say that it has given a clear solution.

There is a short treatise by an interesting though late author, 'Ab dar-Razzāq (*q.v.*), the Ṣūfī († A.D. 1330 at Kāshān), which well represents the point of view of orthodox Muhammadanism on this question. The work is called *Tract on Predestination and Free Will* (*Risālat fi 'l-Qadā wa 'l-qadar*). Amidst many subtleties, we see how the author conceives the rôle and function of the will in human action, and the part he means to leave to it in

relation to God's will. Knowledge, says 'Abd ar-Razzāq, is the impression of the form of a known object on the mind of man; perception is the feeling of the object given by the external senses, such as sight, or by the internal senses, such as intelligence or imagination. Power is that faculty of the soul which makes it able to accomplish or leave unaccomplished any action; will is the decision which encourages or forbids its accomplishing. The distinction between the 'power' and the 'will' of man plays an important part in these discussions.

When we perceive a thing, we know it; when we know it, we judge whether it is agreeable or repugnant to us; and it produces in us a certain inclination which makes us pursue it or reject it: this inclination is will; and it is will that acts upon the power which moves the members according to the choice of the will. In cases where we are not compelled to admit the absolute agreeableness or non-agreeableness of the object, our intelligence employs the faculty of reflexion and imagination to find out to which side the balance leans; and the will of the intelligence gives free scope to its opinions in this investigation. It may happen that a thing is agreeable under certain aspects and repugnant under others; *e.g.*, it may please some of our senses and not the others, it may be good for certain members and harmful for others, it may please the senses and repel the mind, or inversely; or, again, it may be of advantage for the present but not for the future, or inversely. Every agreeable motive produces an attraction, every other a repulsion; if the attractions prevail, the result is a free decision in favour of the action. To this decision should be attributed praise or blame, according as the action is good or bad; it is this decision that deserves either reward or punishment. Nevertheless, 'Abd ar-Razzāq continues, there is no doubt that perception, knowledge, power, will, reflexion, imagination, and the other faculties exist by the agency of God and not by ours. He concludes that we must refer all actions to God as the agent who makes them exist, without, however, entirely withdrawing them from their human authors.

Ghazālī has a fairly thorough investigation of the question in his *Epistle to Jerusalem*, a section of his great treatise on the *Ihyā*. The principle is that everything produced in the world is the act and creation of God—'God has created you, and what ye make' (Qur'ān, xxxvii. 94). No single movement escapes the power of God, but the decision lies none the less with man to a certain extent. Every free act is, in a way, decided twice—once by God and once by man; it depends upon God for its production, and upon man for the merit or demerit resulting from it; or even, outside of the moral sphere, for the advantages or disadvantages following upon it, since for God there is no advantage or disadvantage. This quality in actions of being advantageous or disadvantageous, which does not exist except from the human point of view, is called *kasb*, 'gain' (cf. Jurjānī, *Ta'rīfāt*). The choice, therefore, lies with man, the accomplishing of the action with God; the movement is man's, but created by God. God is the creator of the action decided by the human will.

Even before Ghazālī, this doctrine had been very clearly formulated in the work of the theologian Ash'arī. Human power, according to this *imām*, can have no influence upon the production of actions, for everything that exists is produced by a unique decree which is superior to the distinction between substance and accident; and, if man's decision could influence this creative decree, it could also influence the production of natural objects, and almost create the heavens and the earth. We must, therefore, believe that God has arranged man's actions beforehand in such a way that things will happen at their proper time in conformity with the decisions of the human will. Man produces an action in appearance only; it is really created by God; but, from the moral point of view, the action is 'attributed' to man because he decided it. Here we have a veritable system of pre-established harmony.

4. **With the School of Philosophers.**—The question of providence and evil was thoroughly discussed in the philosophic school. Avicenna (*q.v.*) in particular has some very fine passages on it in his *Najāt* (p. 78, section on Providence, and how evil enters into the Divine judgment), and in a treatise specially devoted to the subject—the *Risālat al-Qadr* (*Treatise on Destiny*, tr. by Mehren). In these we meet with ideas, expressed in very eloquent terms, that might be compared with those of Leibniz.

Providence, for Avicenna, is

'the knowledge of God enveloping everything. . . . The knowledge God has of the kind of beneficence applicable to the universal order of things is the source whence good flows over everything.'

How is evil possible in this world which is enveloped by the thought of the absolutely good Being? Avicenna answers the question by a theory of optimism. He recognizes three kinds of evil—metaphysical, moral, and physical. To moral evil he pays little attention; metaphysical evil does not exist except in potential beings, not yet completely realized, *i.e.* in the corruptible world, which is inferior to the sphere of the Moon; it depends on matter; but in the sphere of the Intelligibles there is no metaphysical evil, since everything there exists in a state of complete perfection. As for physical evil, it is less widely spread than physical good; it is frequent, indeed, but not so frequent as good; not illness, but health, is the normal state. Further, every evil is a good in some sense: the weaker animal torn by the wild beast, and the sparrow carried off by the bird of prey, suffer; but their suffering is for the advantage of the stronger animal. Physical good and evil cannot be the same in the eyes of God as they are to us; His point of view and the motives of His judgment are hidden in a mystery which ought to forbid our condemning His work.

5. **With certain theological sects.**—The doctrine of 'Abd ar-Razzāq is that of the orthodox theologians of Islām; it strikes a happy mean; on either side there is a sect famous in the history of Islām: the Qadarites, who credit man with full power in the production of his actions, and the Jabarites, who credit him with none.

The Qadarites (from *qudrah*, 'human power,' not from *qadar*, 'the Divine decree') hold that man has the power to create his own actions, and do not allow that his evil actions are produced by God. Ash'arī and 'Abd ar-Razzāq reproach them with positing two principles, one for good deeds—God—and one for bad—Satan. The prophet, writes 'Abd ar-Razzāq, said:

'The Qadarites are the Magi of this generation, since they acknowledge two powerful, independent principles, just as the Magi, who looked upon Yezdan and Ahriman as independent principles, the one of good, the other of evil.'

The Mu'tazilites, who were not exactly, as they have been called, free-thinkers, but theologians with a rationalistic tendency, in the 3rd and 4th centuries of Islām, were interested in the question of human freedom; they treated the subject, with a very few differences, in the Qadarite sense.

The Jabarites are the opposite of the Qadarites. They utterly deny the freedom of man; they do not believe that an action really comes from man, but attribute everything entirely to God. Man, they hold, does not even have the power of choice.

God creates the choice and the action along with the sanctions they involve. The name 'Jabarite' comes from *jabr*, 'constraint,' because in this system man is constrained in his every action by the decree of God; good and evil are necessary in him just as are their consequences.

The best known Jabarite teacher is Jahm, son of Safwān. He began to teach at Tirmiz and was put to death by Sālim, son of Aḥwaz al-Māzini, at Merv at the end of the reign of the Umayyads (8th cent. A.D., according to Shahrastāni, text, p. 59). This teacher held that God creates actions in man as He creates them in things, and that actions are attributed to man only metaphorically, as they are to things, when it is said, *e.g.*, that the tree produces fruits, the water runs, etc. Rewards and punishments are compulsory like the actions themselves.

The name Jabarite with the qualification 'moderate' (or 'mitigated') has, according to Shahrastāni, sometimes been given to those who accord a certain rôle in the production of an action to the power of man, while not allowing him freedom of choice. Jurjānī's definition in the *Ta'rīfāt*, that 'the moderate Jabarites are those who accord man a certain merit or demerit in the action, like the Ash'arites,' is not exact; for this last position is confused with the orthodox view.

It should be observed that those ancient Muslim teachers who deny human freedom always deny it on the ground of the omnipotence of God, and not of a purely natural determinism; they still cling to religion even in the very act of annihilating freedom, the condition of moral life.

'Abd ar-Razzāq criticized both sects—Qadarites and Jabarites—in these terms:

'Both are blind in one eye; the Qadarites in the right eye, the stronger, the eye that perceives essential realities; the Jabarites in the left eye, the weaker, the eye that perceives exterior objects. But the man whose sight is sound enjoys two eyes; he sees the Divine essence with his right eye and refers human actions to it, both good and bad; he sees created things with his left eye, and holds that man influences his own actions, not in an independent fashion, but by God. He thus recognizes the truth of the word [attributed to the] Prophet—not absolute constraint or absolute independence, but something between the two.'

6. **In popular belief.**—The popular conception of fatalism, as we have said, applies only to the outstanding accidents of life and to death. Man is in the power of certain superior, obscure forces, and, however he may struggle against them, he cannot alter the destiny in store for him. This is exactly the ancient Greek idea of destiny: human freedom is not denied, but it is represented as vain in practice, in face of the all-powerful forces that preside over our lives. For example, if it is decided by the power above that a man shall die under certain circumstances, nothing can ever prevent the fulfilling of this decree.

It was prophesied to Khalīf Ma'mūn, the famous promoter of philosophic studies in Islām, that he would die at Raqqa; he accordingly always avoided the well-known town of that name; but one day, when returning from an expedition, he encamped in a little place, where he was seized with a violent fever; he asked the name of the village, and was told that it was Raqqa; then he understood that this was the place, unknown to him, to which destiny had brought him, and had no doubt that his death would follow soon—as it did, in fact, within a few hours.

This willingness to believe that death cannot come except at a fixed time and place is a source of great courage in battle; for where is the danger in recklessness? If it is not written that one is to die, he will suffer no harm; and, if it is written, then nothing can save him. Orthodox theology, however, does not altogether approve of this sentiment. Khalīf Omar uttered a very wise saying on this subject, which well represents the point of view of sound theology: 'He who is in the fire should resign himself to the will of God; but he who is not yet in the fire need not throw himself into it.' 'Resignation' or, rather, 'abandonment' to God is the form of fatalism admitted by the teaching of Islām. It is the idea of Christian mysticism—the believer should abandon himself to the will of God. The very name of Islām expresses this sentiment: *islām* means 'the action of giving up oneself, of surrendering' (*i.e.* to God).

B^{ON} CARRA DE VAUX.

FATEHPUR-SĪKRĪ (Arab. *fath*, 'victory,' Hindi *pur*, 'city,' and *Sīkrī*, the original name of the site).—A famous deserted city, situated in the Agra District of the United Provinces of Agra and Oudh; lat. 27° 5′ N.; long. 77° 40′ E.; 23 miles W.S.W. of the city of Agra. Akbar selected the rocky ridge which passes through the old Hindu village of Sīkrī as the site of his new capital.

The native historian, Niẓāmu-d-dīn Aḥmad, in his *Tabakāt-i-Akbarī* (H. M. Elliot, *Hist. of India*, 1873, v. 332 f.), records that 'the Emperor had several sons born to him, but none of them had lived. Shaikh Salīm Chishtī, who resided in the town of Sīkrī, 12 *kos* from Agra, had gladdened him with the promise of a son. The Emperor went to visit the Shaikh several times, and remained there ten or twenty days on each occasion. He commenced a fine building there on the top of a hill, near the Shaikh's monastery. The Shaikh also commenced a new monastery and a fine mosque, which at the present day has no equal in the world, near the royal mansion.' This noted saint of Sīkrī, a descendant of another great saint, Shaikh Farīd Shakkarganj, was born at Delhi in A.D. 1478, and spent the greater part of his life at Sīkrī, where he died in 1572. The son promised to Akbar was born in the house of the saint, was named Sultān Salīm after him, and became Emperor under the title of Jahāngīr (born 1569, ascended the throne 1605, died 1627).

The new palace was founded by Akbar in 1569, after his return from a victorious campaign at Ranthambhor, and the name 'city of victory' commemorates this success and the conquest of Gujarāt which immediately followed. His design in selecting this site for his capital and palace was to secure for himself, his family, and people the benefits of the intercession of the holy man referred to above. It continued to be the principal residence of Akbar until 1584, and was also occupied by his son and successor, Jahāngīr; but it was abandoned by Shāhjahān in favour of Delhi, partly because the position of the latter was superior, and partly because the site of Fatehpur-Sīkrī was found to be unhealthy and the water supply unsatisfactory. Many of the buildings are now in ruins, but careful restoration has been effected by the Indian Government, and a complete survey of the site was carried out by E. W. Smith. Here it is necessary to describe only two of the most important religious buildings—the tomb of the saint Salīm Chishtī, and the Great Mosque, both situated within the same enclosure, the state entrance to which is by a splendid gateway, the Buland or Baland Darwāza, 'great gate.'

Fergusson describes this gate as 'noble beyond any portal attached to any mosque in India, perhaps in the world,' and points out the skill of its architect. The inscription, cut in bold Arabic characters, records its erection in A.D. 1602 to commemorate the conquest of Khāndesh. Coming from a great builder, it has a pathos of its own: 'Said Jesus, on whom be peace! "The world is a bridge; pass over it, but build no house there. He who hopeth for an hour, may hope for an eternity. The world is but an hour; spend it in devotion; the rest is unseen. He that standeth up to pray, while his heart is not in his duty, exalteth not himself, remaining far from God. Thy best possession is that which thou hast given in alms; thy best traffic is selling this world for the next"' (E. W. Smith, *The Moghul Architecture of Fathpur-Sikri*, pt. iv. p. 17).

The Great Mosque is called by Fergusson 'the glory' of the place, and is hardly surpassed by any in India. Bishop Heber (*Journal*, ch. xxi.) characteristically contrasts it with the Oxford and Cambridge quadrangles. A chronogram on the main arch records its erection in A.D. 1571. The tomb of the saint, with its lovely carved arcade enclosing the cenotaph, the body being interred in a vault below, is one of the most beautiful buildings in India. It has been fully illustrated

and described by E. W. Smith. The tomb is largely frequented by pilgrims from all parts of N. India, the great fair commencing on the 20th day of the month Ramaḍān, when the chief guardian, known as Imām, or Sajjādanashīn, 'he who sits on the carpet of prayer,' a lineal descendant of the saint, is enthroned. Women, as well as men, come to pray; and, though the former are not allowed within the cenotaph chamber, they wander timidly and silently round the perambulatory. Many, particularly brides and childless women, attach scraps of cloth or pieces of thread to the delicate tracery of the marble screen, not, as Smith supposes, as 'votive offerings,' but as a means of bringing themselves into sacred communion with the spirit of the saint, who is implored to act as their intermediary with the Almighty to secure the boon they crave. The same belief in another form is shown in the silver horse-shoe placed, according to tradition, by Akbar himself upon the outer gate, and carried off by the Jāṭs when they attacked Agra in 1764; and in the 333 horse- and ox-shoes, some beautifully chased, ornamenting the Buland Darwāza, where they have been placed by people who trusted that the saint would intercede for the recovery of their sick animals.

LITERATURE.—The article is based on the personal knowledge of the place by the writer and on the monograph by E. W. Smith, *The Moghul Architecture of Fathpur-Sikri*, 4 parts, Allahabad, 1894-98; see also J. Fergusson, *Hist. of Indian Architecture*, London, 1910, ii. 293 ff.; E. B. Havell, *Handbook to Agra and the Taj*, London, 1904; A. Führer, *Monumental Antiquities of the N.W. Provinces and Oudh*, Allahabad, 1891; W. H. Sleeman, *Rambles and Recollections*, ed. V. A. Smith, London, 1893; L. Rousselet, *India and its Native Princes*, London, 1882; *IGI* xii. [1908] 84 ff. There are numerous references to the place in the *Ain-i-Akbari*, ed. and tr. Blochmann and Jarrett, Calcutta, 1873-94. For frescoes and other works of art, see V. A. Smith, *A History of Fine Art in India and Ceylon*, 1911, pp. 282, 408 ff., 425, 430, 435, 437, 441, 459 ff., 496.

FATHER.—See CHILDREN, FAMILY.

FATHERHOOD OF GOD.—See GOD.

FEAR.[1]—**1. Definition.**—*Fear* in its most general sense means the anticipation or expectation of evil or pain, as hope is the anticipation of good. In its incidence and kind it may be momentary, transitory, and occasional, or a permanent, persistent, all-pervading influence poisoning the whole mind and character; it may be a natural, healthy resistance to a passing physical danger, or a morbid enslavement, a paralysis of will and effort in the anticipation of some remote and improbable contingency. *Surprise* may be regarded as a mild form of fear—the query as to whether an evil is present or not; *astonishment* is a slightly stronger form of the same emotion; *embarrassment* and *shyness* are social forms; *anxiety* is a more diffuse, indefinite kind; *terror* is usually employed for more extreme and sudden onsets of fear, *fright* for a momentary case, and *horror* for the deepest degree to which the emotion attains (C. Darwin, *Expression of the Emotions*, ed. London, 1892, ch. 12). *Timidity*, again, is the general character or temperament from which fear is likely to spring.

2. Physical concomitants.—In its more pronounced form, fear has correlated with it a distinctive group of physical changes in the organism, which, together with their outward effects, form its 'expression.' These are: (1) *changes in the circulation*: the blood-vessels contract, with resulting pallor and lowered temperature in the skin of the body; the heart beats more rapidly and more violently, as if against a greater resistance. (2) *Changes in the respiration*: the breathing becomes laboured; it is shallower and more rapid, with occasional deep inspirations, while in extreme cases the mouth is opened wide as if for easier breath. (3) *In the glands* also action takes place: the skin perspires freely (a 'cold sweat'); the mouth is dry because of the failure of the salivary glands; the voice is hoarse and whispering. (4) *In the viscera* the digestive processes are checked; extreme fear may produce nausea and sickness. (5) *The muscles* are variously affected: the skin trembles all over the body ('shivering with fear'); the voice is tremulous as well as hoarse, and may fail to act ('the tongue cleaving to the roof of the mouth'); the eyes are opened widely ('staring'), the eyebrows arched, the forehead wrinkled, the lower jaw dropped; the arms are swung upwards, as if warding off an approaching enemy; the body, at first motionless and rigid, may become flaccid, the individual shrinking, crouching, perhaps falling limp to the ground. In children, and in most primitive races, these phenomena are exaggerated; in civilization, they are modified by training and other causes, but some never fail to present themselves wherever fear is. Similar expressions are found in animals; in the rabbit the ears turn pale at any sudden change in the environment, as the barking of a dog, or the flight of a passing bird; so with other animals, where the presence, in any part of the surface of the body, of a rich supply of blood makes changes from redness to pallor visible. Trembling from fear also occurs in most animals, while the motionless crouching and the 'shamming dead' of various species correspond to the paralysis of muscles found in man. The more intense the emotion, the greater is the number of muscles affected, and the greater the amplitude of the movements made, according to Pflüger's law (A. Mosso, *La Peur*, Fr. tr. of 3rd Ital. ed., Paris, 1886, p. 34).

Herbert Spencer suggested that the nervous current follows the line of least resistance; those muscles which are most frequently used, and also those which are nearest the nerve-centres, and which are small and unattached to any resisting weight, will present the most permeable paths. Hence the facility with which the muscles of the face are played upon by fear, as by every other emotion (*Essays*, 2nd ser., 1863, pp. 109, 111). Mosso (p. 113) explains the influence of fear upon the capillary blood-vessels, their contraction and the resulting paleness of the skin, on similar principles. It is known that the centres of all such emotional expressions, including the palpitations of the heart, the trembling of the skin-muscles, etc., lie in the brain below the cerebral mantle (in the optic thalami, etc.), and that they still take place in animals from which the greater part of the fore-brain has been removed. It is only 'associative' fear that is no longer shown: a dog, for example, does not show fear, in such a condition, at the *sight* of the whip, but does so at its *crack*; the former is an acquired, the latter an instinctive fear-reaction (Mosso, 40). Mosso, therefore, rejects Darwin's theory as to the *origin* of such reactions, viz. that they have been voluntarily adopted in some previous generation, and then transmitted as 'acquired habits,' the effect accumulating from generation to generation, until the structure of the animal has been so modified that the action is compulsory and invariable. The wide-open eyes and raised eyebrows, for example, are referred to the effort to *see* better the object of fear; the wide-open mouth of horror is explained partly by the effort to *hear* better, mouth-breathing being less noisy than nose-breathing, partly by the needs of a rapid inspiration; the muscular actions as preparation for flight or for attack; the erection of the hair as a relic of the tendency, found in many species of animals, to make the appearance more terrifying to an opponent, as dogs raise the hair of the back, cats fluff out their hair and rise on tip-toe, reptiles and amphibians swell the body or neck, etc. (Darwin, pp. 100, 110).

Darwin had also considered that the focusing of attention on the object of fear might have the effect of withdrawing nervous energy from the general musculature of the body; hence, perhaps, the hanging jaw, the trembling of the skin, the shrinking of the body in fear. It is to a more general principle such as this that Mosso and Lange prefer to appeal—the tendency of the organism towards equilibrium, when subjected to stimuli of different kinds; circulation and respiration are the processes which are most rapidly modified in different situations—cold and heat (whether local or general), light, sound, taste, etc. The immediate effect of any great mental disturbance, arising from a strong stimulus, is to send blood to the brain, withdrawing it from the skin and muscles and the internal organs. The organism, as it were, draws its forces towards the centre, in order to be able to direct them effectively to the right point of attack. For the same reason the heart beats more rapidly, to

[1] For aspects of fear not discussed in the present art., see RELIGION, REVERENCE.

keep the centres supplied with fresh materials. The withdrawing of the blood from the scalp may be a direct cause of the erection of the hair, and, even when the latter does not occur, and when the terror is prolonged, the trophic disturbance may cause the hair to turn grey or fall out soon afterwards. The circulation of the blood is dependent in its turn on a sufficient supply of air to provide it with oxygen; the panting breath of a great fear is similar in its nature and its origin to the panting after an exertion, or during a cold shower-bath. There is a great drain on the cerebral energy, and all the vital processes are set in action to counteract it or make it good. The trembling of the body, shrinking of the skin, pallor, and the rest, are, as it were, by-products of this general reflex tendency; they are not adaptive, and serve no end for the advantage of either individual or species.

So obviously is the 'expression' of fear in ordinary cases unadapted to assist the organism that Darwin, after suggesting the explanation by 'relics' of useful habits,—no longer useful in present circumstances,—admitted the insufficiency of his explanation. It has even been thought that the fear-reactions were determined by natural selection, not for the good of the terrified species—the victim—but for that of the terrifying species—the beast of prey. This would, indeed, be a bizarre product of evolution. Mosso showed that they have simply no reference to evolution: the trembling of the body, for example, in fear, is similar to the trembling which occurs when lifting a heavy weight, or when exhausted by illness: the nervous excitement prevents us from co-ordinating the movements of the many muscles involved in every—even the simplest—action, as standing, walking, speaking, etc. A man who is afraid does not see better, however widely he opens his eyes; he does not hear better; he is the less prepared for action the greater his terror and therefore, presumably, his danger. Actions which are so injurious to the organism should have been discarded in the course of evolution, but in fear the reaction becomes more ill-adapted, more hurtful to the individual, the greater the actual danger is (Mosso, 122 f.); they are not, therefore, products of evolution, but symptoms of disease, pathological forms taken by normal processes under abnormal conditions.

The principle of adaptation can be applied only when we are dealing with very mild forms of fear—little more than expectation or surprise: the expression in such cases involves several of the attention reflexes—the wide-open eyes, the raised eyebrows, and the frown, which Darwin interpreted as a nascent crying, but Mosso showed to be part of the action of adapting the *sight* to a near object. Any mental effort tends to set in play the muscles used in external attention, just as all higher mental processes tend to have as their 'expression' the same reactions as occur in the corresponding *sensory* processes.

3. The objects of fear.—In its *type* form, fear is a perceptual emotion, felt on awareness of an object or recognition of a situation of some definite kind. In other words, the object in the fear-consciousness is complex and indirect, containing elements which are added to the immediate effect of the stimulus, either from memories of past experience or in some other way. Small and defenceless birds show fear of the hawk and other birds of prey, and of snakes or serpents; horses show fear of the wolf, its appearance, its howl, and even its odour; kittens show fear of dogs; dogs of tigers and lions; cattle of strange dogs, etc. The gnat is said by Hudson to have an 'instinctive' fear of the dragon-fly; the cockroach, according to Belt, of the larger spiders; the child has fear in insecure positions (fear of falling), fear of the dark, of wild animals, etc. It seems, then, as if there were definite classes of objects, corresponding to the most dangerous features in the natural life of every animal, with the perception of which fear is associated. Healthy dogs are said to avoid 'instinctively' a dog which has rabies; they will not attack it, nor do they retaliate when themselves bitten by it. The question arises as to how this is possible. A natural explanation refers the formation of the percept, and its association with the fear impulse, to the experience of the individual, either in memory of actual experience, as a dog 'learns' to reject food seasoned with mustard, or in some sort of inference from past experience, as a child, having fallen from a table to the ground, may feel insecure at any high level afterwards. But, as this explanation is obviously inadequate to account for fear in infants and in young animals, which is exhibited apart from any experience of the injurious influence of the objects feared, the argument has been extended to include the ancestors of the individual. It is *their* experience and not his that conditions his special behaviour towards the object of fear. In the former case, simple and comparatively familiar forms of association account for the result: a cat hears the bark of a dog for the first time, then sees the dog, which springs upon it and shakes it; the painful experience leads to protective reactions of clawing, spitting, etc.; one or more experiences of this kind are sufficient to drive home the association, so that the sound or sight of the dog calls up directly (1) a memory of the sensations of being seized, etc., (2) the feeling of pain, and (3) the impulse to attack or to escape (G. H. Schneider, *Der thierische Wille*, Leipzig, 1880, § 4). It is not a memory of the original feeling, but a new and actual feeling, that is caused by the remembered sensations; but, since the cerebral processes involved in sensation and its 'memory' are probably the same, in part at least, the feelings will also tend to be similar. Thus fear, as a feeling, is a form of *pain*, and its reactions are similar to those of pain. With repetition of this process, the sensations of being seized fail to be remembered consciously, and the feeling and impulse attach directly to the sight or sound of the feared object.

There is ample evidence in human life of this dropping out of links—for example, the frequent cases in which a person or a kind of food is disliked, because of some forgotten experience in the past, perhaps in early childhood. The emotion may in such a case be utterly out of proportion to its immediate object. The cerebral processes, corresponding to the original experience, may really be excited, but not sufficiently to give separate and distinct consciousness of the past. Cases are frequent where one wakes from a light sleep with a vague feeling of depression, dread, or terror, without any object being consciously before the mind; but a search or some chance association through the day may recall a dream in which some situation of terror was actually presented. The emotion caused by the dream persisted after the consciousness of the latter had itself ceased. Such subconscious states have been found to be a common condition in many cases of pathological fear (see below), and the fear has been cured or removed by bringing the cause to full consciousness, so that its irrationality is appreciated.

Similar to the above process, but less direct, is that in which fear is caused in a social animal by the sight of the suffering or death of one of its own kind. It is from these and the former experiences that G. H. Schneider supposes instinctive and congenital fears to have been evolved. The reactions to such percepts become habitual in the individual, modification of the cerebral or other central nerve-elements takes place, and these modifications become congenital in the descendants—either by way of natural or 'organic' selection, or through direct inheritance, if such is possible (*Der thierische Wille*, 108 ff., and *Der menschliche Wille*, Berlin, 1882, pt. i. ch. 4). In either case what is congenital is not the perception or the emotion as such, but the conditions on which their formation depends; there is no inherent difficulty in the conception of 'connate' ideas of this kind; the perception of a particular object, as of a lion, with differential reactions towards it, may be as easily congenital, and may be accounted for in the same way, as the sensation of a colour, *e.g.* red, or green, the power to differentiate which has been undoubtedly 'evolved' from a primitive colourless light-sense. Hence a young animal, as is suggested, might easily have an untaught 'recognition' of a dangerous foe, with the corresponding emotions. A bird, even before leaving the shell, ceases chirping at the warning cry of the mother-bird; within a day after hatching it will crouch motionless under the same conditions, or, if it is a young water-bird, it will dive in the water; later, it will of its own accord shrink and stand quietly still when a hawk appears in the air. Conversely, young cuckoos, it is said, pay no heed to the shrill warnings of their foster-mother. Belt (*Naturalist in Nicaragua*[2], London, 1888, p. 109 f.) describes a tribe of butterflies, 'naturally' fearless because distasteful to most animals, but showing immediate fear of a con-

spicuous wasp which preyed upon them. But experiments show, whatever be the case with insects, that birds and higher animals have no such instinctive dread of particular objects. Thus there is no congenital fear of man (Hudson, *Naturalist in La Plata*[2], London, 1892, p. 83 ff.); birds crouch with fear not merely at a hawk, but at any large object flying over them; in Aberdeenshire, when grouse are very wild, and are being shot over dogs, a practice of keepers is to fly a paper kite; this has the effect of making the birds lie quiet till the dog is almost upon them. The cry of a hawk frightens, but so does any harsh, shrill, or grating cry; blind kittens show fear, hiss, and bristle at the smell of a dog, but they do the same at any strong odour —such as ammonia (Lloyd Morgan, *Animal Behaviour*, London, 1900, p. 48).

E. L. Thorndike describes experiments on the fears of chicks, corroborating Morgan's decision 'that no well-defined specific fears are present; that the fears of young chicks are of strange moving objects in general, shock in general, strange sounds in general.' No specific reaction occurred, *e.g.*, to the presence of man or to the presence of a cat, unless the cat sprang upon them, when they showed the same sort of terror as when 'a basket or football' was thrown among them. The general fear of a novel object in motion is not present from the beginning, but develops during the first month; this is also true of the fear of man. Among the interesting observations made is that of the great individual differences between chicks, both in the immediate reaction, and in the process of acquiring definiteness of perception. The mew of a cat, for example, caused a great show of terror in one or two chicks, but none at all in others (Thorndike, *Animal Intelligence*, N.Y. 1911, p. 162). Thus, inheritance, as Lloyd Morgan expresses it, only 'provides the *raw material* for effective consciousness to deal with, in accordance with the results which are its data' (*op. cit.* p. 51).

However simple or however complex the fear-consciousness may be, the reactions, and, therefore, probably the feelings themselves, are essentially the same as those of the sensory experience—for example, the feeling and reaction on being clawed, bitten, mauled, or otherwise injured (Schneider, *Der menschliche Wille*, ch. 12). The differences between actual pain and its reaction on the one side, and the mental anticipation of pain in fear and *its* reaction on the other, are differences only in the *extent* of the muscles and organs affected, the *number* of movements made, etc. In no case is *will* concerned with the origin of the fear-reactions; they are neither distinctly intentional, nor the 'traces,' 'relics,' or 'rudiments' of ancestrally willed and supposedly useful actions. Experience may modify them, lead to a selection of their objects, and to the control or even the exaggeration of their movements, but it has had no part in their formation (cf. also Lloyd Morgan, 110).

In the child the first real expression of fear is towards sudden, sharp, and unfamiliar sounds, also to loud, voluminous sounds, and, in some cases, even to musical sounds when first heard (J. Sully, *Studies of Childhood*, London, 1896, p. 194). Occasionally such fears do not show themselves in the early months, until the child is a year old or more; according to Sully, they are not to be explained entirely by the disturbance to the nervous sensibility, but by a sort of 'vague alarm at the unexpected and unknown'; when the sounds have been frequently repeated, the fear disappears. The fear of falling, shown by all children of a few months old, when being awkwardly carried, or later, when first trying to walk, may be referred to the same general cause: the situations are unfamiliar, therefore mentally disturbing. No doubt also the experience of actual falls is a contributory influence. In the case of visual impressions, again, it is mainly the new and strange—a new room, a strange person, a change of dress in a familiar person, any new or distorted form of a familiar object, a grimace, an awkward movement, the play of shadows. Feathers and fur, animals of all kinds when first seen, more especially black animals, and the dark, especially being alone in the dark, are familiar occasions of fear in nearly all children, although these feelings are not developed until the child is several months old. Many children are afraid of being alone even by day. But in this, and in respect of every other 'fear,' children differ so enormously from each other, so much depends on experience, on the suggestions of adults, that the idea of an hereditary or atavistic element in child fear seems unnecessary and even absurd. As in the case of animals, fear of the novel, sudden, startling, or disconcerting, along with fear of what actually causes pain to the child, gives a sufficient basis for experience to work upon. Fears of the imagination, probably because of the very vagueness of the imagery underlying them—such fears as the incautious nurse excites by her tales of 'black man,' 'bogey,' ghost and goblin, ogre and dwarf, robbers and murderers in the dark places, etc.—are of the most intense description, and often seriously weaken a child's character for life (see Mosso, ch. 14).

Is it true, then, that the child in these cases is suffering in a rudimentary form the actual fears, sprung from experience, of its remote ancestors? Mosso holds that it is so:

'Destiny gives as a legacy to each of us a fatal inheritance. Abandoned in the forest, confined in a tower, without guide, without example, without light, the experience of our parents and our most remote ancestors is revealed in us as a sort of mysterious dream. What we call instinct is the voice of extinct generations, resounding as a distant echo in the cells of the nervous system. We have in us the inspiration, the advice, the experience of all men, from those who perished naked in the forests striving against furious wild beasts, and who fed upon acorns, down to our fathers and mothers who transmit to us their virtues, their courage, their anxieties, and their tenderness' (p. 168).

As indicated in art. DEVELOPMENT (Mental), Stanley Hall ('A Study of Fears,' *AJPs* viii. [1897]; see also A. F. Chamberlain, *The Child*[2], London, 1906, p. 265) has greatly extended this view: fear of wind and water, of fire and darkness, of solitude, of strangers, of animals, of fur, of teeth, etc., are all alike referred to various ancestral stages in the life of the human race. But, apart altogether from the extreme unlikelihood of such 'acquired' characters being hereditarily transmitted, the above simple conditions seem sufficient to account for the facts. The varieties observed in children may be explained by an inherited timidity in some, or nervous weakness, with consequent excitability—the same cause which makes women more easily terrified than men, and the victim of alcoholic or other form of nervous disease more easily terrified than his fellows. A peculiarly intense shock of fear in childhood, and especially in early youth, may permanently weaken the system, so that a slighter cause may produce fear or terror than with the normal individual.

4. Theory of fear.—As is well known, these views have led C. Lange[1] and William James[2] to regard the feeling of fear as succeeding, not preceding, the reactions; it is the consciousness of these changes and movements *as* they are occurring and *after* they have occurred—a consciousness conditioned by sensory nerves leading from the various muscles and joints of the body, from the skin, and from the various internal organs, to the brain. In this 'back-stroke' hypothesis, expression precedes feeling or emotion; the reaction (the 'expression') is connected directly with the perception of the object, or with the sensory elements 'integrated' in the perception; further, feeling itself ceases to be a different kind of mental element from sensation; in the last resort *fear* can be analyzed, it is claimed, into the *awareness* of the coldness and shivering of the skin, the perspiration, the trembling muscles, the ineffectual efforts, the dryness of the mouth, the sinking of the stomach, the inability to see clearly, to attend

1 *Ueber Gemüthsbewegungen* (tr. from Danish), Leipzig, 1887.
2 *Principles of Psychology*, London, 1891, vol. ii. ch. 25.

or to think steadily, etc.; each of these phenomena has its reflex in consciousness, and these in their sum make up the emotion of fear. Thus, according to Lange (p. 40), *fear* has its characteristic colour from these three processes—the weakening of voluntary innervation (this by itself characterizes *disappointment*), the contraction of the blood-vessels (these two combined represent *sorrow*), and the spasm of the organic visceral muscles. Its diametrical opposite, from this point of view, is *anger* (heightening of the voluntary innervation, dilatation of blood-vessels, but with inco-ordination of action added). In these various manifestations the primary are the vasomotor changes; the muscular weakness, *e.g.*, comes from the fact that the nervous system, like the skin and other organs, receives too little blood (p. 41), owing to the narrowing of the fine arteries. Fear, then, is simply the perception (or other consciousness) of certain changes in the person's body (p. 51):

'Take away the bodily symptoms, let the pulse beat quietly, the eye be steadfast, the colour healthy, the movements rapid and certain, the speech strong, the thoughts clear—what is there left of the fear?' (p. 53).

The chief evidence appealed to by both Lange and James is: (i.) the cases of fear and similar emotions existing without any adequate or conscious cause; these, however, the ordinary theory is quite competent to explain, as above suggested. (ii.) The admitted effect of such drugs as alcohol: fear can be removed by alcohol, and by its abuse fear in the most extreme form (as in *delirium tremens*, or in neurasthenic anxieties, etc.) may be produced without, in either case, the external situation offering any cause. This is because alcohol, at first and in moderate doses, excites the vasomotor apparatus, increases the frequency and strength of the heart-beat, dilates the capillary vessels, heightens the voluntary innervation, etc., while alcohol-poisoning has precisely the opposite effects. In the former case, speech and movement are easy, the subject feels warm and active, the thoughts flow freely; in the latter, speech, action, sensation, thought are all alike paralyzed: the resulting state in the one case is *courage*, in the other *fear*, and the emotions suggest objects, imaginary if no real ones can be fixed upon. The process is therefore (*a*) physical state, (*b*) emotion (its conscious reflex), (*c*) object, in that order of time, whereas, on the ordinary theory, the procession is from object (perception) to emotion, and from emotion to physical state (expression).

It does not belong to this article to discuss the general theory; there can be no question, however, (1) that in our own case, and in that of animals, the fear-reaction is instinctive, and attaches directly to the perception of its object; (2) that the emotion itself, of fear, is in us largely constituted by sensory and perceptual elements arising from our changed organic and muscular state; (3) there are also many associative ideas present, memories and imaginations of evil, from our own direct experience, from tradition, from analogy, etc.; but these factors alone do not account for the emotion; in itself it is (4) a mental attitude, depending in each case partly on the sensations and their feelings (pain), partly on the bodily disposition as a whole, health, fatigue, etc., partly on the cerebral disposition in particular, as modified and determined by past experience. (5) What is now innate, both in the expression and in the discrimination of the objects of fear, had its origin in previous generations in the simple feelings and reactions directly correlated with sensations. The gradual dulling, with growing civilization, of such emotions as fear is explained partly by man's increasing intellectuality—the blood is drained more habitually towards other cerebral centres than the vasomotor—and partly by training in control, the inhibition of these, as of other reflex-actions, through the discipline of family and school life. From both these causes the lower liability to *physical* fear in ourselves as compared with more primitive peoples, or with our own ancestors of a generation or two back, can be explained. But what the modern fear has lost in *intensity* and in materiality it has gained in *extensity*, in persistence, in refinement of torture. Worry is the most common form, and its influence illustrates the two fundamental characters of intellectual and spiritual fear: on the one side, the attention is held only by those sensations or percepts, those passing memories, images, and thoughts which harmonize with or corroborate the emotion; the latter forms a morbid apperceptive system by which the whole outlook upon life, the colour and trend of the thoughts, is modified; on the other side, action is paralyzed, dangers, difficulties, evil consequences, uncertainties are constantly before the mind, so that the individual either does not act at all, or acts on any blind impulse that happens at a given moment to have some strength.

In disease of the brain or of the general nervous system, whether organic or functional, the deficient energy with which the various nervous processes are carried out, the ineffective muscular action, the poorer 'tone' of the whole body, imperfect digestion, shallower breathing, defective circulation, have as their mental correlate a state of nervous anxiety or dread, with confusion of thought, and inability to will or to act. Frequently this vague anxiety becomes fixed upon some special object; the melancholy table given by Féré (*The Pathology of Emotions*, Eng. tr., London, 1899) illustrates the variety of forms in this torturing malady—fear of open spaces, of precipices and of heights, of closed places, of water or of liquids in general, of cold, of draughts, of thunder, of fire, of solitude, of crowds, of animals, of poisoning, of infection, of death, of ruin, etc. In many cases there is some event in the individual's life, the memory of which is revived under the stress of the emotional state, so that it is raised to the intensity and associative force of a dominant idea; in other cases such a real experience has occurred, perhaps in early childhood, but has been forgotten; yet it may be subconsciously revived by the emotion, and so draw to itself the control of thought and of action, without rising into distinct consciousness, except under the analysis of the physician. Superstitious fears are largely of this subconscious type; the intensity of the fear is quite disproportionate to the ideas actually in consciousness. To see the baneful influence of such fears in full force, one must go to the African or Australian native. Thus, R. H. Nassau (*Fetichism in West Africa*, London, 1904) represents fetishism as a monstrous outgrowth from natural beliefs; it is crushing the natives out of existence even more effectively than the white man's competition, destroying independence of mind and freedom of thought among individuals; trust, even in one's nearest relatives, has ceased to exist—there is universal fear and insecurity; as every act has to be carefully deliberated, and all possible measures taken against evil influences, the result is an appalling waste of human effort, waste of human life, and the decay of all hope of progress or even of escape. On the other hand, fear, especially fear of the inexplicable, of the unknown, has formed an almost universal stimulant to religious custom and belief. In the individual, as in the race, the coming of religion—conversion—is, in a very large number of cases, as Starbuck's analysis shows, the sequel of a longer or shorter period of intense anxiety and fear (*Psychology of Religion*[2], London, 1901, ch. 4).

LITERATURE.—The works of Darwin, Spencer, Mosso, Sully, William James, and C. Lange, as referred to in the text; also W. McDougall, *Social Psychology*[3], London, 1911.

J. L. McINTYRE.

FEARLESSNESS.—In the highest forms of *courage* (*q.v.*), fear (*q.v.*) still persists as an element; there is at least the consciousness and, therefore, the anticipation of danger. Many of the bravest soldiers have gone with trembling limbs and palpitating heart through their earlier engagements, and many a moral or religious act of devotion or of self-sacrifice has been carried out 'in fear and trembling,' yet is all the more highly valued on that account. *Fearlessness*, on the other hand, is insensibility to danger, where the natural or normal individual would be keenly conscious of it, as in a situation involving almost certain death, or loss of fortune or social reputation. It may arise from inexperience or ignorance, as in the case of an infant's attitude to fire, or that of the Antarctic penguins to man when first approached by him; or, again, from the absorption of a strong, instinctive impulse, as when a mother-animal turns to defend her wounded young, regardless of her own danger, or as in the case of the sheep-dogs in S. America, described by Darwin, which showed extreme timidity when away from their flock, but turned with the utmost ferocity and fearlessness when back among the sheep with which they had been brought up, and which they probably regarded as their 'pack.'[1] So in man, the consciousness of numbers, as in the 'crowd,' gives a suggestion of strength to the individual, and inhibits in his mind the thought of difficulty, of danger, of possible evil consequences; a naturally timid man may under such conditions become absolutely fearless.

In such cases, fearlessness springs from a *temporary* absorption or concentration of the attention on one group of facts, with correlative anæsthesia for others, especially those inconsistent with the former. The intensity of absorption in its turn is explained by some primary instinct, social or individual, which is stimulated. Such a state may also be natural and *permanent*, as in those fortunate beings who, with a capacity for finding happiness in almost any conditions, never experience evil in their own lives, and fail to appreciate the extent of its presence in those of others: W. James gives Walt Whitman as an instance (*op. cit. infra*, p. 84). So in all great enthusiasms—moral, religious, artistic—even the most ordinary risks, doubts, drawbacks, consequences, do not enter the mind at all; or, rather, they are thought of only as one notes and avoids obstacles in walking across a room, as conditions requiring some adjustment of our action, but not in the slightest degree affecting its successful issue. Such an attitude tends of itself to compel success: confidence is increased; energy, both physical and mental, is economized; the highest possible co-ordination between thought and action is obtained, without any of the irresolution, uncertainty, weakness, which fear connotes. Civilization has not removed the bodily weakness and mental incapacity of animal fear, while it has enormously extended the number of fear-objects, just as it has widened the conception of the self, to include the family, the nation, and the race. In its modern form of 'worry,' as in older animal forms, fear is destructive to the individual, paralyzes activity, and debases the quality of thought.

A religion which gives the sense of an Infinite Power behind the finite individual, and of infinite goodness, tends of itself to remove all fear, to produce fearlessness, so far as the religion is really believed. Christian Science (*q.v.*) and other 'mind-cure' philosophies make this their conscious aim—to produce in the individual, whether by persuasion or by suggestion, a sense of perfect security and trust. All strain, all effort, doubt, hesitation, worry, mental and, to some extent, even physical fatigue, fall away, when the thought of self has been banished. The result that is claimed is a great increase not only in the happiness, but also in the efficiency, courage, and confidence of the individual (see the chapters on 'The Religion of Healthy-Mindedness,' in W. James, *Varieties of Religious Experience*, London, 1902, p. 78 ff.; the characteristics of Saintliness, *ib.* p. 272 ff.; and the striking instance of George Müller, *ib.* p. 468 ff.).

FEASTING.—*Introductory.*—The custom of feasting together is a direct development of the meal partaken in common. The allaying of the pangs of hunger by food taken at more or less regular intervals has had for man very important and unexpected results. Perhaps as a result of food being prepared at the hearth—the seat of ancestral spirits or, ultimately, of gods—the gods came to be recognized at the common meal by being presented with some of the food. Eating thus assumed a religious aspect. But, by the very fact that the meal was partaken of in common, it was in itself a bond of union between the eaters; and, since it was shared with gods, it thus obtained a sacramental character. Hence there was no more usual way of admitting a stranger to kinship than by permitting him to share the common meal. Again, since the partaking of food gave rise to pleasurable sensations, man's social instincts suggested the sharing of these sensations with others when abundance of food or some luxurious form of food was available. In all these ways the common meal easily passes over into the feast, in which there is a religious, a social, and a sensuous aspect, as far as savage and barbaric life is concerned, and frequently at higher levels also.[1] In savage and barbaric life, feasting occupies a considerable place and is indulged in upon every possible occasion. The mere fact that food is abundant frequently leads to a feast in which large quantities are consumed or wasted, with the usual savage lack of forethought. The mere desire for good fellowship and for jollification may lead to a feast at which there are guests from far and near.

Such gatherings are found in the Nicobar Islands, when, invitations having been duly sent out, the guests arrive bringing contributions for the feast of pork, yams, plantains, toddy, etc. (Solomon, *JAI* xxxii. [1902] 203 f.). Among the Eskimos there are festal dances during the winter in the *casine*, or town-house, when the performers and all present indulge freely in fish and berries (Bancroft, *NR* i. 67). Among the Mosquitos there are frequent drinking feasts lasting for many days, whenever liquor is plentiful (*ib.* i. 735).

Such gatherings may have a collective importance if they are of a tribal character.

Among the Andaman Islanders a chief will organize a tribal feast, sending invitations to all within easy reach. Food is prepared in abundance, and feasting and dancing go on all night. Next morning the guests exchange presents with their friends (Man, *JAI* xii. [1883] 388 f.). At a higher stage, as in China, the same is found. The *Li Ki* describes the festive meetings in each territorial district for drinking and feasting. These had also a religious aspect, since sacrifice was offered at them (*SBE* xxvii. [1885] 56, xxviii. [1885] 435 ff.).

In civilized society the same social instinct leads to frequent gatherings, private or public, at which the guests eat and drink and enjoy each other's company. While the motive for these on the part of the giver of the feast may be mere display, none the less the idea of fellowship is there, and the pleasurable sensations aroused also stimulate that fellowship.

In this article we shall consider feasting as it occurs at different periods: birth and name-giving, initiation, marriage, funerals; in connexion with sacrifice; and at various seasonal festivals, including harvest.

[1] Cf. the remarks of Wundt, *Ethics*, London, 1897, i. 171 ff.

1. Feasts in connexion with birth.—Children being generally regarded as a valuable asset among savages and barbaric peoples, rejoicings usually take place either before or soon after birth, often in connexion with the ceremony of name-giving. Thus among the Northern Massim a feast is given when it is certain that the wife is pregnant (Seligmann, *Melanesians of Brit. New Guinea*, Cambridge, 1910, p. 704). Among both Hindus and Muhammadans in the Panjāb, feasting takes place during the 8th and 9th, or the 7th month of pregnancy (Rose, *JAI* xxxv. [1905] 277, 279). In E. Africa, when a young wife is pregnant for the first time, a great feast is held in which only women who have borne children take part (Macdonald, *Africana*, 1882, i. 128 f.). Among the Southern Massim the umbilical cord of a first-born child is placed in the sheath of one of the leaves growing near the base of a banana. 'When it bears fruit, the first of a series of feasts termed *sipupu* is given to the child's maternal uncles, and the produce of the tree forms a part of the feast.' Four or five feasts are given at intervals of a month (Seligmann, 487). At Uvea a feast is held soon after the birth of a child, in connexion with a ceremonial lustration (Ploss, *Das Kind*[2], Leipzig, 1884, i. 258). Among the Baganda, at the name-giving ceremony, a feast was made for all the relatives present (Roscoe, *The Baganda*, 1911, p. 62). The birth of twins was celebrated with much feasting, as this was regarded as a very lucky event, dancing and promiscuous intercourse being part of the proceedings (*ib.* pp. 68–72). At the baptism of the child among the Muhammadan Swahili the ceremony is ended with a feast (*ZE* xxxi. [1899] 67). Among the Mayas a birth was celebrated with especial rejoicings, and feasts were held when the umbilical cord was cut (Bancroft, *NR* ii. 679). Similarly the Nahuas held a feast a few days after birth, while during the baptism of the child the festivities lasted 20 days, and open house was kept by the parents (*ib.* 270, 276). American Indian tribes usually celebrate name-giving with festivities. Thus the Pottawatomies make a great feast, inviting numerous guests by sending a leaf of tobacco or a small ring (de Smet, *Voyages*, Brussels, 1873, p. 393). On the occasion of the birth of a child among the Pūna Musalmāns, friends are invited to feast on the goat offered as a sacrifice, the parents, however, abstaining from the food (Campbell, *Notes on the Spirit Basis of Belief and Custom*, Bombay, 1885, p. 410). Among the Chinese, when the ceremonial of shaving the child's hair takes place at the end of the 1st month, a feast is held to which neighbours and relatives are invited (see *ERE* ii. 646[a]). At the *amphidromia* celebrated by the Greeks on the fifth day after birth, banquets were held for the assembled friends and relatives (Ephippos, in Athen. 370 D), and on the tenth day, at the name-giving ceremony, festival-banquets were also held (Aristoph. *Birds*, 494, 922 f.; Eurip. *Elect.* 1126, fr. 2). In Burma, a fortnight after birth, a fortunate day and hour are fixed by an astrologer for the name rite, and a feast is prepared for all the friends and relatives (Monier-Williams, *Buddhism*, London, 1889, p. 353). Among the Tibetan Buddhists the name-giving ceremony concludes with a feast (Köppen, *Rel. des Buddha*, Berlin, 1857–59, ii. 320). Muhammadans celebrate a birth with great feastings and rejoicings, the father entertaining his friends, usually on the seventh day or on seven successive days after a birth (Lane, *Arabian Society*, 1883, p. 187, *Modern Egyptians*, 1846, iii. 142 f.). In modern times and in Christian countries the festal gathering of relatives after a baptism is analogous to and continues these feasts of ethnic races.

2. Initiation feasts.—Initiation being an important period in the life of the savage youth, it is a time when many ceremonies are performed, and among these a feast has usually a prominent place, since the admission of the youth to full tribal privileges is naturally an occasion of rejoicing. In the Andaman Islands, when a lad breaks his 'turtle fast' (see FASTING [Introd.]) for the first time, a feast is arranged by his friends, consisting mainly of turtle (Man, *JAI* xii. [1883] 130). Among the tribes to the north of the Papuan Gulf, the feast takes place, not at initiation, but when the boy is five years old. The father gives a dedicatory feast in order to declare that the boy will be fully initiated at the proper time (Holmes, *JAI* xxxii. [1902] 419). In Fiji, at the annual initiation to the Mbaki mysteries, a feast was held each night, and on the fifth day a great feast took place at which all kinds of food previously under tabu were prepared. The youths received food sacramentally, after which feasting took place, and was continued for several days (Thomson, *Fijians*, 1908, p. 152 f.). In New Britain, when lads are initiated to the Dukduk mysteries, local feasts, followed by a general feasting, terminate the rites (Brown, *Melanesians and Polynesians*, 1910, p. 66 f.). Similarly, in the Banks Islands, admission to the *suqe*, or club, demands a costly feast, at which much eating takes place and licence is general (Codrington, *The Melanesians*, Oxford, 1891, pp. 53, 103, 106). The initiation of youths among the Basutos was accompanied by a feast and dances (Casalis, *Les Bassoutos*, Paris, 1859, p. 277). Among the American Indians such feasts are wide-spread. Thus, among the Salish, at the initiation of a youth to the secret society, his father feasted the society for five days, masked dances being performed (Boas, *Report of the U.S. Nat. Mus. for 1895*, Washington, 1897, p. 644 f.). Among the Tsimshian, initiation to the secret society is associated with a feast and dancing (*ib.* 659 f.). Circumcision, which is often a species of initiation, is accompanied by festivities. In Fiji it was followed by a great feast and indescribable revelry (Thomson, 157). Among the Bageshu of Mt. Elgon the chief kills an ox to furnish a feast for the boys (Roscoe, *JRAI* xxxix. [1909] 185). The Naivashai Masai have a circumcision feast at which bullocks, sheep, and milk are contributed by the elders. The feast lasts for three months, and is accompanied by dancing, singing, and drinking—the 'warriors' feast.' Before their circumcision the boys themselves have a feast lasting two days (Bagge, *JAI* xxxiv. [1904] 167). Similar feasts often take place when girls attain the age of puberty, and frequently in connexion with their being tatued (see Seligmann, 265). As an example of feasting at initiation in higher religions, the rites of Isis-worship may be cited. After the fasting and baptism of the candidate, he was exposed to the gaze of the multitudes. Then followed a joyous banquet and merrymaking. A religious feast was also held on the third day (Apuleius, *Metam.* xi.).

3. Marriage feasts.—Here the feast has a definitely ritual aspect, since, by eating together, bride and bridegroom, as well as their respective relatives and friends (or in some cases these alone), are bound together, or the feast is an outward expression of this union.[1] In some instances the feast is almost the chief or the only rite of marriage; but in any case it has a ritual aspect, though this tends to disappear in more advanced societies, where the feast is little more than an occasion of merrymaking, expressing, however, mutual friendliness. Among the Roro-speaking tribes of New Guinea,

[1] The Roman rite of *confarreatio* and similar rites elsewhere, though not of the nature of a feast, express even more clearly the same idea of union (see Crawley, *Mystic Rose*, 1902, p. 379 ff.; Hartland, *LP*, 1895, ii. 343 f.).

part of the elaborate ceremonial of marriage consists in the bridegroom's kin bringing many pigs to the bride's folk, who supply a large quantity of fish and bananas, upon which a feast is made. With the Southern Massim the kin of the bride and bridegroom exchange presents of food, upon which they feast, the young couple, however, not partaking. This constitutes a binding marriage (Seligmann, 271, 504). In Fiji the feast, provided by the bridegroom, was an indispensable part of the ceremony, and was followed by the bridegroom taking the bride to his house (Thomson, 202). In New Britain, three days after the bride was taken to the man's house, a feast called *Wawainim*, 'giving to drink,' was held, the friends of the pair exchanging pigs and coco-nuts. Three days later a more elaborate feast was held.

It consisted mainly of a large dish of *taro* and coco-nut milk, and of baskets of puddings, almond nuts, chestnuts, bananas, etc. These were arranged in a line, with bundles of food brought by separate individuals. The guests marched round these, and the chief broke a coco-nut over the heads of the pair. Food was then interchanged, the large dish of *taro* being kept for the second day (Brown, 115 ff.).

In Florida (Melanesia), after the bride has remained two or three months in the house of her father-in-law, her parents bring presents of pigs and other food there, and a feast is made upon this. Neither bride nor bridegroom partakes, but after the feast the young man takes his wife, for now he is married (Codrington, 238). Among the Yoruba, a marriage feast is held at the house of the bridegroom's parents, the bride's parents taking no part in it. There is much merrymaking, and the feast is continued on the next day (Ellis, *Yoruba-speaking Peoples*, 1894, p. 154). Among the Baganda, after the consummation of marriage, the bride visited her own people, who gave her presents of food. Next day she cooked a feast for her husband, who called together his friends to share in it, the first meal prepared for him by his wife (Roscoe, 91). With various S. African tribes, marriage is the occasion of a great feast and dance for the friends, neighbours, and retainers. One head of cattle must be killed, or the marriage would be disputed. Beer and milk also form part of the feast (Macdonald, *JAI* xix. [1889–90] 271). Among the Stlatlumh (Lillooet) of British Columbia, when the bridegroom is conducted by the elders of the bride's family to sit by her, a feast follows at the house of her people. A few days later, the parents of the bride pay a return visit to the parents of the bridegroom, when another feast takes place (Tout, *JAI* xxxv. [1905] 131 f.). With other American tribes, feasts and dances had a prominent place at marriages (Bancroft, *NR* i. 350, 515, and *passim*). The Araucanos held a feast three days after the bride was taken home, to which the relatives of both the young people came (Latcham, *JRAI* xxxix. 359). In higher civilizations the marriage feast still plays an important part. With the Aztecs a banquet shared by all the relatives and friends, but in which the wedded pair took no part, concluded the ceremonies; and among the Mayas a great feast, with lavish quantities of food and wine, was an essential part of the proceedings (Bancroft, ii. 258, 668). In ancient Babylon, the marriage day ended with a feast in which the families of bride and bridegroom and numerous guests participated (Maspero, *Dawn of Civilization*[4], 1901, p. 735). Feasting and merriment on a most extensive scale are a necessary part of all Hindu weddings; and among the aboriginal tribes, *e.g.* the Gonds, the wedding feast is equally important, and is characterized by much drunkenness and licence (Monier-Williams, *Rel. Thought and Life in India*, 1883, p. 380 ff.; Hopkins, *Rel. of India*, Boston, 1895, p. 528). Among Buddhists, the principal ceremony of marriage is a feast which is given by the bridegroom or the parents. To this all relatives, priests, and neighbours are invited. There is no religious service (Monier-Williams, *Buddhism*, 359). Among Muhammadans in Egypt, the bridegroom feasts his friends, once or oftener, before the wedding. Feasts also take place on the night before the nuptials and on the wedding night; and, according to Muhammad, 'the first day's feast is an incumbent duty, the second day's a *sunnah* ordinance, and the third day's for ostentation and notoriety.' Feasting also takes place on the seventh and fortieth days after marriage (Lane, *Modern Egyptians*, i. 208 ff., iii. 141 f., *Arab. Soc.* 232 f.). Among Indian Muhammadans also the festivities precede and follow marriage (Hughes, *DI*[2], 318). Among the Greeks the wedding feast (γάμος) took place after the procession to the bridegroom's house, and it formed one of the most important parts of the proceedings, as there was no civil or religious ceremony. Women as well as men took part in it, though the women sat at a separate table. The bride was then conducted to the nuptial chamber. Among the Romans, after the bride arrived at the bridegroom's house, he gave a feast to the guests, the *cœna nuptialis*, and sometimes a second feast, the *repotia*, on the following day.

4. Funeral feasts.—A meal or feast partaken in common before, at, or after burial is universal among the lower races. Such feasts are often of a most elaborate and prolonged character, affording an opportunity for display and for gluttony. It is also customary to renew them at intervals after a death, or on the anniversary, or there may be a yearly feast of the dead (for many examples, see *ERE* iv. 434 ff.; Seligmann, *passim*; Brown, 201; Roscoe, 120 f.; Seligmann, *The Veddas*, Cambridge, 1911, p. 130).

Wundt (*Ethics*, i. 141) has shown that the reason sometimes alleged as the origin of these feasts—viz. the custom of giving food to all who attended the funeral as a compensation for their trouble in coming, this passing over into a duty and often becoming a means of ostentatious display—does not really explain their origin. There is no doubt that the feasts originated out of a desire at once of propitiating and of holding communion with the dead by means of the food which they were now supposed to share with the living. Hartland has argued that the feasts in which the mourners eat with the dead kinsman are a natural transformation of the cannibal feast *upon* the dead (*LP* ii. 278). Although this is not unlikely, yet, where food was offered to the dead and shared by the living, the practice would originate and exist independently of the cannibal meal.

Among higher races the funeral repast is also found. In Egypt, during the long interval which often elapsed between death and burial, feasts were held in honour of the dead (Wilkinson, *Manners and Customs*, ed. 1878, iii. 432). In Babylon the monthly offerings to the dead formed also the material of a meal by which the living had communion with them (see *ERE* iv. 445). Among the Greeks a funeral repast (περίδειπνον) took place in connexion with the rites of burial, those who took part in it regarding themselves as guests of the dead (Lucian, *de Luctu*, § 24; Artemidor. *Oneirocr.* v. 82; *Il.* xxiii. 52 f.). The anniversary of a death was celebrated by a repast or feast (γενέσια, νεκύσια) as well as in other ways. The Romans ate a funeral repast at the tomb, the *silicernium*, and a banquet in honour of the deceased was held at the house, the *cœna funeris*. Memorial feasts were also celebrated during the *Parentalia*, the family festival of the *cara cognatio* (Ovid, *Fasti*, ii. 117 f.), at the actual anniversary of a death, and at other times. In China the food placed before the dead man is eaten by the family, and after the funeral the food which has been placed on the tomb forms part of the funeral feast. Subsequently, memorial feasts are also held (de Groot, *Rel. System of China*, Leyden, 1892 ff., i. 118, and *passim*). The ancient Teutons celebrated great funeral banquets (*erfiol*, or 'heir beer') in which the soul of the deceased was supposed to participate, and at which the heir entered

on his inheritance (de la Saussaye, *Rel. of the Teutons*, Boston, 1902, p. 301). Among the Burmese, great feasting goes on in the house for the benefit of the crowds who come to offer condolence (Monier-Williams, *Buddhism*, 369). In Tibet the relatives and friends are entertained during the funeral rites with much food, beer, and tea—a species of 'wake' at which the dead man is also offered a share. A year after a memorial feast is held (Waddell, *Buddhism of Tibet*, 1895, pp. 491–98). In modern Europe, memorial feasts for the dead occur sporadically among the folk (Tylor, *PC*³ ii. 37), and a meal is often partaken of by the relatives after a funeral, this, however, having now little ritual significance. See also ANCESTOR-WORSHIP, COMMUNION WITH THE DEAD, DEATH AND DISPOSAL OF THE DEAD.

5. Sacrificial feasts.—Whatever be the origin of sacrifice, the custom of the worshippers feasting upon part of the offering is wide-spread. The feast has a religious aspect, whether we regard it as an actual eating of slain divine victims, or as eating, together with a spirit or divinity, of food which has acquired a sacrosanct character.[1] The Veddas of Ceylon make offerings of food to the spirits of the recently dead, and then eat the offerings as an act of communion with them (Seligmann, 130). In Florida (Melanesia) at a public sacrifice some of the food was presented to the *tindalo*, and the remainder was eaten by the sacrificer and the assistants (Codrington, 131). In Fiji the gods were supposed to eat the 'soul' of the offering, the worshipper consuming the substance of it (Williams, *Fiji*, 1858, i. 231). In Samoa, men partook of the offerings to Tangaloa, god of the heavens, women and children being excluded. Of another sacrificial feast in the cult of Taisumalie, for which all kinds of food were prepared, only the family of the priest partook (Turner, *Samoa*, 1884, pp. 53, 57). Among the Tshis, after a human sacrifice to the river-gods, a bullock was killed and divided among the inhabitants of the village (Ellis, *Tshi-speaking Peoples*, 1887, p. 66). Among the Baganda the owner of a fetish often sacrificed a fowl to it, dropping the blood upon it. The bird was then cooked and eaten by him and his friends in presence of the fetish (Roscoe, 329). The Zulus feasted on the black cattle sacrificed to the sky-god when rain was required (Callaway, *Rel. System of Amazulu*, 1884, p. 59). The Patāris sacrifice a goat, fowl, and cakes to the Earth-goddess, the males and unmarried girls eating the flesh (Crooke, *PR*², 1896, i. 32). The ancient Peruvians at the great festival of the solstice feasted on the sacred llamas which were slaughtered sacrificially. Much wine was also consumed, and the feast was closed with music and dancing (Prescott, *Hist. of Conquest of Peru*, 1890, p. 51). Herodotus describes a sacrifice of a pig to the moon in Egypt. Part of it was consumed by fire and the remainder eaten by the worshippers (ii. 48). At the festival of Isis an ox was sacrificed, and the parts which were not burned were eaten by all present (Wilkinson, iii. 378). Among the Greeks the sacrificial feast was well known. Indeed, every meal had a sacrificial aspect, and there, as elsewhere, feast and sacrifice were almost synonymous terms (cf. Athen. v. 19). Part of the victim was burned on the altar, the remainder was cooked and formed part of the sacred feast, the θάλεια δαίς. These feasts were often occasions of great indulgence (Diog. Laert. vi.; *Life of Diog.* § 4), and the gods were believed to take part in them (*Od.* vii. 201 f.). One of the main objects of the religious associations (θίασοι, ἔρανοι) was the celebration in common of sacrifices and feasts in which the flesh of the victim was the staple along with cups of wine (Foucart, *Des Assoc. rel. chez les Grecs*, Paris, 1873, pp. 2, 154, 238). Among the Romans, when the *exta* of the victims had been burned on the altar, the remainder was eaten in a feast with bread and wine by the worshippers, or, in the case of official sacrifices, by the magistrates and senators (Wissowa, *Rel. und Kultus der Römer*, Munich, 1902, p. 353 f.). In the cult of Mithra the sacrificial repast had also a prominent place (see Cumont, *Myst. of Mithra*, Chicago, 1903, p. 160).

The ancient Teutons in sacrificing animals offered only the *exuviæ* to the gods, and a great feast on the flesh followed. On great occasions much cattle was slaughtered, and many people assembled to take part in the ceremony, bringing food with them, and feasting and drinking together, toasting the gods and each other. Here, also, the gods were conceived as sharing the feast with the worshippers (Vigfusson-Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 404; Grimm, *Teut. Myth.* 1882–88, p. 46 ff.; de la Saussaye, *Rel. of the Teutons*, 369 f.). In India in Vedic times, while the gods were offered a share of food at festive gatherings, the worshippers partook with them of the flesh of victims sacrificed; and god, priests, and men held feast together (Monier-Williams, *Rel. Thought and Life in India*, 12 f.). The drinking of the soma at soma-sacrifices had also a solemn festive aspect, and rendered the recipients immortal (*Rigv.* viii. 48. 3). Animals are seldom offered in sacrifice now, but, when they are, the flesh is partaken of at a solemn feast, *e.g.* in the cult of Sītalā (Risley, *TC*, Calcutta, 1891, i. 179). In general the offerings at most sacrifices are partaken of more or less sacramentally by the worshippers. In Tibet the common service of the 'sacrifice to the whole assembly of Rare Ones,' *i.e.* to all the gods, concludes with the eating of the offerings by the Lamas, the gods having partaken of the essence of the food and so consecrated it (Waddell, 431). Sacrifices of animals are made on mountain passes, and those present dine off the flesh with much singing and dancing (Landor, *In the Forbidden Land*, 1898, ii. 38). In many of these instances the feast upon sacred food is prepared for by propitiatory and other ritual customs, *e.g.* by fasting (*q.v.*).

6. Seasonal feasting.—Among the lower races, with whom, as with higher races, the regulation of the food supply is of the highest importance, the periods connected with sowing, ingathering, the opening of the hunting season, etc., are times of rejoicing, in which after hard work it is natural for them to feast; and, as these seasons are associated with divine influences, feasting has a prominent place. Man feasts with his gods. But, besides these, other seasonal occasions are also celebrated with feasting, *e.g.* the appearance of the new moon, the recurring festivals of divinities, etc. The Abipones celebrated the reappearance of the Pleiades with great rejoicings, ceremonial dancing, and feasting (Dobrizhoffer, *The Abipones*, 1822, ii. 234). The people of the Shortlands group (Solomon Islands) held a festival called *Viloto* when the Pleiades appeared at the nutting season (Brown, 210). Among the ancient Mexicans, at the end of each cycle of 52 years, the passing of the Pleiades across the zenith—the sign of the endurance of the world for another period of 52 years—was the occasion of great rejoicing, eating, and drinking (Bancroft, *NR* iii. 394 f.). Among the Southern Massim a great feast was held during the south-east monsoon. For this enormous quantities of food were prepared and distributed among all present (Seligmann, 584). In Mysore the appearance of the new moon was the signal for a great feast in honour of deceased parents (*TES*, new ser. viii. [1869] 96). The Yoruba also feast when the new moon appears (Ellis, 82). The Baganda

[1] Cf. the excellent remarks of Ames, *Psych. of Rel. Experience*, Boston, 1910, p. 122 f.

celebrate a feast lasting 7 days, at each new moon, in honour of the python god, the people feasting and dancing by day and night (Roscoe, 322). Similarly many American Indian tribes held a feast with sacrifices at the beginning of the hunting season, at which all the victims must be eaten (Tanner, *Narrative of Captivity*, New York, 1830, pp. 195, 287; Schoolcraft, *Indian Tribes*, Philadelphia, 1853–6, iii. 61). But most general is the festival at harvest time, when the firstfruits are either offered to spirits or divinities, or solemnly eaten by priest, chief, or people. Until this is done no one may eat of them, but then follows much feasting and merriment. A few examples of this will suffice. The tribes of the Niger celebrate the yam harvest by a feast to which every one contributes a fowl (Parkinson, *JAI* xxxvi. [1906] 319). The Yoruba at the yam harvest celebrate a festival in honour of the god of agriculture. All partake of the new yams, and quantities of vegetable foods are cooked and set out for general use (Ellis, 78). In Fiji great feasts take place at the time of the presentation of the firstfruits of the yams to the ancestral spirits (Fison, *JAI* xiv. [1884–85] 27). Among the Jakun of the Malay Peninsula there is an annual feast at harvest when, besides dancing and singing, much eating and drinking takes place (Skeat, *JAI* xxxii. [1902] 133). The Dayaks hold a festival when the paddy is ripe. They place the firstfruits on an altar, dance and feast for two days, and then get in their crops (St. John, *Forests of the Far East*², 1865, i. 191, and S. B. Scott, 'Harvest Festivals of the Land Dyaks' *JAOS* xxix. [1908] 236–280). In Celebes at the time of the new rice, fowls and pigs are killed, and some of the flesh with rice and palm-wine is given to the gods. Then the people eat and drink together (Graafland, *Die Minahassa*, Rotterdam, 1869, i. 165). Turning to American Indian tribes, we find that the Seminoles at the 'Green Corn Dance,' having prepared themselves by fasting, ate sacramentally of the new corn, and then enjoyed a great feast (MacCauley, *5 RBEW* [1887] 522 f.). The Natchez at their harvest festival, which was solemnly observed with fasting and offering of the first sheaves of the maize, concluded their rites with a great feast (Chateaubriand, *Voyage en Amérique*, Paris, 1870, p. 136). In India the Hos hold a Saturnalia when the granaries are full. Sacrifice is offered, the dead are commemorated, and feasting and drinking follow (Dalton, *Descr. Ethnol.*, Calcutta, 1872, p. 196 f.). The hill tribes near Rājmahāl hold a thanksgiving festival, when the new grain is ceremonially eaten and sacrifice made. The ceremony concludes with drinking and festivity for several days (Shaw, *Asiatic Res.* iv. [1795] 56 f.). Similarly, the Japanese held a festival of firstfruits of the rice, followed by feasting in holiday dress, songs, and dances (Aston, *Shinto*, 1905, p. 277).

Among the lower races, festivals of the gods are sporadically found, of which one great incident is feasting. The Elema tribes of the Papuan Gulf held tribal feasts for eating, drinking, and merry-making, associating with these one or more tribal gods (Holmes, *JRAI* xxxix. 427). In Samoa, annual feasts were held in honour of the gods (Brown, 229). The Yoruba held many such annual festivals, *e.g.* one in honour of Oro lasting for 3 months, at which the men feasted on dogs and fowls (Ellis, 111). The Gonds held an annual festival in honour of the snake, and another in honour of the sun, both of a licentious and bacchanalian character (Hopkins, 527 f.). Many such annual festivals were held in Mexico, all of them being occasions for great feasts in which much food and drink were consumed, and much licence occurred (Bancroft, iii. 341, 347, 360, and *passim*).

In the higher religions the many recurrent festivals of divinities are usually the occasion of feasting. Men honour the gods; and, feeling themselves on good terms with them, they rejoice before them—the rejoicing being both testified to and stimulated by the consumption of food and drink. See artt. on FESTIVALS AND FASTS.

Thus in most religions, from the lowest upwards, festival occasions are signalized by the consumption of good cheer, which lightens men's hearts and is at once a symbol of their joy in commemorating their gods and a further cause of that joy, passing over frequently into orgiastic excesses. In some instances, however, religions or cults in which even a moderate asceticism is considered right tend to disparage excessive indulgence in food or feasting, *e.g.* Buddhism and also certain aspects of Egyptian religion. Thus in the Maxims of Any it is said: 'That which is detestable in the sanctuary of God are noisy feasts' (Petrie, *Rel. and Conscience in Ancient Egypt*, 1898, p. 160). Christianity, though it does not forbid festal rejoicing, and, though many of its festivals were celebrated with good cheer—even a common meal being associated with the Eucharist (see AGAPE)—teaches that all excessive indulgence, gluttony, and drunkenness are wrong. Moderation in feasting is, however, hardly to be found in the bulk of the ethnic religions and at lower stages. Indeed, these feasts are often the occasion not only of excessive eating, but of drunkenness and sexual abominations (see DEBAUCHERY).

See also the following article; and cf. throughout FESTIVALS AND FASTS.

LITERATURE.—This is cited throughout the article.

J. A. MACCULLOCH.

FEASTING (Hebrew and Jewish).—I. Religious joy characteristic of Judaism.—The underlying higher motive for feasting among the ancient Hebrews and pious Jews of the Diaspora down to the present day is religious joy of one degree or another. The occasions of rejoicing may range from celebrations of universal import, such as the ingathering of the harvest, to more or less private family reunions, as at a wedding or the weaning of a child; but the motive of religious joy is to the pious Jew the golden thread that runs through all his seasons of cheer and gladness. It is possible for this high motive to rest on a perverted principle, as was, for instance, the case at the making of the golden calf, when 'the people sat down to eat and drink, and rose up to play,' or perhaps 'to make merry' (Ex 32⁶). But even so a religious element would remain; for all worship, be it ever so perverted, is capable of inspiring its devotees with its own special kind of joy. There is, however, this important difference between idolatrous occasions of rejoicing and those sanctioned and regulated by the pure Jahweh-cult that, whereas pagan festivities were, generally speaking, only too likely to lead to practices which the higher conscience regards as immoral, the close union of all joy with the lofty dictates of Mosaic piety was calculated to restrain the Israelite from indulging in excesses for which there would naturally be much stimulus during seasons of public or private feasting.[1]

The great prominence given in the OT to the idea of religious joy is attested, not only by the stress frequently laid on it in the sacred texts, but also by the series of Hebrew words (שָׂשׂוֹן, מָשׂוֹשׂ, שִׂמְחָה, גִּילָה, רִנָּה, דִּיצָה, חֶדְוָה, besides the verb עָלַז and its cognates and derivatives) employed to express the various gradations of rejoicing. For it is clear that, where there is a full appreciation of the different degrees of any given sensation, there must first of all be

[1] The few exceptions to this wholesome restraint, *e.g.*, the habit of copious drinking at the Feast of Purim (see, *e.g.*, Abrahams, *Jewish Life in the Middle Ages*, Lond., 1896, pp. 103, 382), do not, as a rule, involve more than venial shortcomings.

a strong and fully realized sense of its presence. A mere glance at the rows of passages given in the Hebrew Concordances under the respective roots of the words named will be sufficient to impress the mind with the prevalence of the idea of religious joy in the Hebrew Canon, but it will be useful to refer here especially to such typical passages as the following:

'Ye shall rejoice before the Lord your God seven days' (Lv 23^{40}: Feast of Tabernacles); 'Serve the Lord with rejoicing, come before his presence with singing' (Ps 100^{2}); 'To keep the dedication with gladness, both with thanksgiving, and with singing, with cymbals, psalteries, and with harps' (Neh 12^{27}).

Mosaism, it will be remembered, set itself to discourage all gloomy brooding on a shadowy hereafter in Sheol, and all the uncanny and disquieting practices that were connected with such brooding, and placed before the people instead the ideal of a life of brightness, plenty, and holy rejoicing. Some special illustrations of the continuance of the same cherished ideal among the Jews of later times will be found in § 2, and the reader will do well to consult, *e.g.*, the article 'Freude,' in Hamburger (where a number of Talmudical references bearing on this topic will be found), besides the various articles in the *JE* to be referred to later. The marked development of the idea of the hereafter among the Jews of post-Biblical times had, indeed, its share in fostering a strong ascetic tendency in some members of the race, but the bulk of the nation and the majority of its leaders remained faithful to the old ideal of sacred joy; and, as the later Jewish doctrine of the future life was—to persons of a cheerful disposition, at any rate—not centred in the thought of torment or of a shadowy Hades, but rather in a life of bliss for the good under the wing of Jahweh, they found no contradiction between the newly developed idea of the life to come (העולם הבא) and the ancient Divine command to rejoice in the present (העולם הזה). They, indeed, gave themselves earnestly to fasting and mourning on the days specially set aside for that purpose, but the dominant tendency of their mind remained one of hope, and of the readiness to rejoice which accompanies hope.[1] It is even correct to say that one effect of the many sufferings and persecutions which the Jews had to undergo was to heighten the relish of religious joy on every possible occasion. The Ghetto is generally thought of only as a place of depression and gloom, a kind of mediæval Jewish purgatory, but it had its bright side as well. In their secluded homes, their synagogues, their convivial gatherings, their Sabbaths (when capacity for the pleasures of the table was enhanced by the bestowal of a נשמה יתירה, *i.e.* additional soul), and more particularly their festival rejoicings, they found a welcome refuge from the many ills that beset them in the world around. The inwardness of the hopes and joys that were left to them, as well as their love of ease and good cheer, had a tendency to grow with the dangers, the contumely, and the suspicions that fastened on them so readily from the outside.

2. Occasions of feasting.—A brief survey of the chief occasions of feasting, additional to those of festivals proper, may be fitly grouped under (*a*) special celebrations that were in vogue during the second Temple and partly dated from pre-Exilic times; and (*b*) seasons of rejoicing largely observed down to the present day, partly celebrated in continuation of customs prevalent in OT times, and partly dating from later times. The feasting that was customary at the reunion or parting of friends (*e.g.* Gn 26^{30}), at a time of sheep-shearing (1 S 25^{36}, 2 S $13^{23ff.}$), or on an occasion like that of the home-bringing of the Ark (2 S $6^{12ff.}$, 1 Ch $15^{25ff.}$), when David 'danced before the Lord with all his might,' need not be included in the list chosen for special treatment.[1]

(*a*) First to be noted under this head are the processions from the provinces connected with the *conveyance and presentation of the firstfruits to the Temple priests at Jerusalem*, in accordance with the ordinance contained in Dt 26^{1-11} (v.[11] 'Thou shalt rejoice in all the good,' etc.). This semi-festive religious observance no doubt goes back to very early times, and has its parallels in the customs of other nations (see *HDB*, art. 'Firstfruits'). The time during which the presentations could be made extended from the Feast of Weeks or Pentecost to the Hasmonæan Feast of Dedication (in the month Kislev [December]) (see *Bikkurim*, and cf. Philo, *de Festo Cophini*, and Jos. *Ant.* IV. viii. 22).

A much greater degree of rejoicing characterized what is commonly known as the *Water-Feast*, which was celebrated during the nights of the Feast of Tabernacles. According to *Sukkah*, v. (where an account of these additional festivities will be found), a person who has not been present at these celebrations 'has never seen joy.' The real character of the festivities is still a matter of dispute. Geiger (*Lehrbuch der Mischnah*, Breslau, 1845, *s.v.* שׂוֹאֵבָה, which he translates by *Fackel*, 'torch') and others consider the torchlight procession to have been its principal feature. Herzfeld and Venetianer (see Lit. at the end of the article) have respectively advocated a connexion with celebrations in honour of Dionysus and with the Eleusinian Mysteries. The extraordinary effort of a chief like Simeon b. Gamaliel I. to amuse the people on these occasions by personally engaging in a grotesque dance with eight lighted torches in his hands (Bab. *Sukkah*, 53*a*) would seem to favour the idea that he had a particular reason for diverting the attention of the populace from the undesirable associations of such festivities. The purpose of giving a higher sanction to an originally pagan celebration may also be discerned in Midrash Rabba on Gn 29^{2} (ch. lxx. § 8), where the water-drawing is made to signify the bestowal of the Holy Spirit (cf. *ExpT* xxiii. [1912] 180, and where also the well-known suggestion of a connexion with the 'rivers of living water' of Jn $7^{38.39}$ is referred to).

Special mention must also be made of the thirty-five days enumerated in *Megillath Ta'anith* (original text begun in the 1st cent. A.D. and completed in the 2nd), on none of which public fasting was allowed, whilst on the most important of them public mourning was also prohibited. The first of these days was the 8th of Nīsān, on which certain Pharisaic statutes were carried in opposition to the Sadducees; and the last date was the 28th of Adar, when news of the close of the persecutions instituted by Hadrian arrived. There is a distinct religious flavour about these half-festive occasions and the entire tone of *Megillath Ta'anith*.

(*b*) The second part of this survey may appropriately begin with the question of *birthday celebrations* among the Jews. There is no clear reference to such celebrations among the ancient Hebrews in the OT. The mention of the 'day of our king' in Hos 7^{5} may quite naturally be taken to refer to the anniversary of the king's accession to the throne, and the other passages quoted in *JE* iii. 221 are still less decisive.[2] The only clear reference to a birthday festivity in the OT is found in Gn 40^{20},

[1] As one of the best illustrations of the prominence given by the Jews to the idea of life's joy, even in seasons of highest seriousness, may be cited the custom of Jewish maidens in Mishnaic times, and possibly earlier, who went out in white apparel to dance in the vineyards on the Day of Atonement (besides the 15th day of Ab) for the purpose of directing the minds of Jewish young men to thoughts of matrimony (so Bab. *Ta'anith*, 26*b*; *Baba bathra*, 121*a*).

[1] The occasion of the feasting referred to in Job $1^{4f.}$ is not clear. As the seven days appear to have been consecutive, they could hardly have been birthdays.

[2] On Job $1^{4.5}$ see the preceding note.

and relates to the Egyptian Pharaoh. The birthday celebrations in the Herodian family (see Jos. *Ant.* XIX. vii. 1; Mt 14⁶) were, no doubt, an imitation of Græco-Roman customs of the time. All one can say of Jewish feeling about it in mediæval times is that the birthday celebration of a private person among pagans lay under a minor kind of ban, its connexion with idolatrous worship not being considered pronounced enough to warrant the cessation of all business connexion with the pagan concerned for three days preceding the festivity, so that the ban lay only on the day itself (see Maimonides, *Mishneh Torah* (הלכות ע״ז וחקות הגוים, ch. ix.).[1] In modern times, however, Jews very largely adopt the custom of birthday celebrations from their neighbours.

The *circumcision feast*, which was celebrated by banqueting in Talmudic times (see *JE* ii. 496), had, of course, a profoundly religious significance; but the attempt of the Rabbis to refer the institution of such feasting to Abraham (see *JE, loc. cit.*) rests on a mere quibble. There is no mention of banqueting on the occasion of a circumcision in the OT.

The *weaning* of an infant, on the other hand, which apparently took place at the end of the 2nd or 3rd year of the child's life, was made the occasion of feasting or of sacrifice in very early times (see Gn 21^{8}, weaning of Isaac; 1 S $1^{22ff.}$, weaning of Samuel). The reason for the celebration was, no doubt, the entrance of the child on a more independent and more vigorous existence, but under the religion of Jahweh all such thoughts were permeated by a strain of genuine religious joy.

An occasion of festivity, the mere title of which suggests its religious character, is that of *bar-miṣwah* ('son of commandment'), a term denoting a youth who has completed his thirteenth year, and thus enters on a life of religious responsibility. On the first Sabbath in his fourteenth year the youth is for the first time in his life called up to read a portion of the *Torah*, and sometimes also the prophetic section entitled the *Hafṭarah*. A family feast, to which the teachers of the youth as well as friends are invited, and at which religious addresses are delivered by the *bar-miṣwah* himself and others, is the natural accompaniment of this institution. The oldest Rabbinical reference to the idea underlying the initiation is found in *Pirkē Abōth*, v. (near the end), where a youth is declared liable to observe the commandment at the age of thirteen (בן שלש־עשרה למצות), although the name *bar-miṣwah* itself appears to be of much later origin (see *JE* ii. 509). The account of onr Lord's disputing with the doctors of the Law, when only twelve years of age (Lk 2^{42-49}), has been brought into relation with the same idea. In Morocco a boy becomes, in fact, *bar-miṣwah* when he has passed the age of twelve years (*JE, loc. cit.*).

On the subject of festivities connected with *betrothal* (in the old Jewish sense of a ceremony of so binding a character that only divorce could dissolve it) and *marriage* (*i.e.* the home-taking of the bride), only one remark need here be made. Although the Jewish contract of marriage is a purely civil one, in the sense that the presence of a Rabbi and its ratification in a synagogue are unessential, yet the occasion is one of profoundly religious import. Marriage being a Divine ordinance, and the procreation of children a sacred duty, wedding festivities must in the nature of things also bear a decidedly religious character.

A minor occasion of sacred holiday-making in old-fashioned Jewish circles, and more particnlarly among young students of the Talmud (hence called 'Scholars' Festival'), is *Lag bĕ-'Ōmer*, i.e. *the thirty-third day counted from the second day of the Passover Feast*, when a sheaf of the firstfruits was brought as a 'heave-offering' (Lv $23^{9ff.}$). The exact reason for the festivity is lost in obscurity (for some Rabbinical guesses, see *JE* ix. 400); but some kind of connexion with the progress of agricultural operations appears to follow from its dating after the heave-offering at Passover time; for, as has already been intimated, religious joy has in the Jewish mode of thought been associated with such occasions from early times.

Worthy of mention are also the various local *Purim festivals*, celebrated in imitation of the Biblical Purim, or Feast of Esther, on anniversaries of deliverance from great calamities. One of the best-known of these is the Purim of Cairo, annually held in that city on the 28th of Adar, in commemoration of their escape from the dangers that threatened the Cairene Jews in 1524 at the hands of Aḥmad Shaiṭān Pasha (see *JQR* viii. [1895-96] 274-288, 511 f.). The reading of a *Megillah*, written in close imitation of the Book of Esther, forms the central part of this religious observance. For a list of similar celebrations (including as late an occasion as that of the Purim of Padua, which is held in commemoration of the extinguishing of a great fire in 1795), see *JE*, art. 'Purims.'

See also artt. FESTIVALS AND FASTS (Hebrew) and (Jewish).

LITERATURE.—In addition to the original texts and the various works already named, the reader should consult J. Hochman, *Jerusalem Temple Festivities*, Londoo, 1908 (i. 'Presentation of the Firstfruits'; ii. 'The Water-Feast'), L. Herzfeld, *Gesch. des Volkes Israel*, Leipzig, 1871, ii. 125, and L. Venetianer, 'Die eleusin. Mysterien im jerus. Tempel,' in Brüll's *Populärwissenschaftliche Monatsblätter*, 1897, pp. 121-125, 169-181, for theories on the Water-Feast. Among the editions of *Megillath Ta'anith* is that of Neubauer in *Mediæval Jewish Chronicles*, ii. (*Anecdota Oxoniensia*, Semitic Series, vol. i. pt. iv.), and a full account of the work is given in Hamburger, *Realencyc. des Judenthums*², Leipzig, 1896, Supplementband, i. 104-107. On other topics, see *JE*, artt. on 'Banquets,' 'Betrothal,' etc.

G. MARGOLIOUTH.

FEBRONIANISM.—The system of Church government defended by Hontheim, auxiliary Bishop of Trier in the 18th cent. under the pseudonym 'Justinus Febronius.' It is the German form of Gallicanism with an Erastian colouring; it had a great vogue at the time, lasted as a tendency during the early 19th cent., and was not finally expelled from the Roman Catholic Church till the Vatican Council in 1870.

1. Life of Hontheim.—Johann Nicholas von Hontheim was born of a distinguished family at Trier on 27th Jan. 1701. His father and most of his relatives were officials in the service of the Bishop-Electors. He began his studies at the Jesuit college at Trier, and continued them at the universities of Trier, Louvain, and Leyden. When he was 12 years old, he was tonsured and received a canon's stall at the collegiate church of St. Simeon in his native city. At Louvain he came under the influence of Van Espen. He took his degree in law in 1724, travelled in Belgium, Holland, Germany, and Italy, was three years at the German College at Rome, was ordained priest at Trier in 1728, and taught Canon Law in the university from 1732 to 1738. From 1738 to 1747 he was 'Offizial' (agent) of the Elector at Coblenz, and Director of the Seminary there. In 1747, already overburdened with literary work, he retired to his canonry at Trier. But the Elector (Franz Georg) appointed him auxiliary Bishop in place of the one who had just died. He was ordained at Mainz on 13th May 1748, with the title Bishop of Myriophytus *in part. infidelium*, and he remained auxiliary and Vicar General *in spiritualibus* under the Electors Johann Philipp (von Waldendorf) and Clemens Wenzeslaus (von Sachsen) to the end of his life. The Electors lived at their castle on the Rhine, and were more princes than bishops, so that Hontheim was practically bishop of the diocese. He enjoyed a great reputation for learning and piety. On several occasions he succeeded in composing strife, and in every way he showed himself a zealous and edifying bishop. No one disputes the correctness of his morals, the excellent work he did for the diocese, or the value of his historical writings. From the year 1746 he was Vice-Chancellor of the university of Trier, and in that capacity came into frequent conflict with the Jesuits. Towards the end of his life he was known throughout Europe as the author of the *Febronius*, and was much troubled by the controversy

[1] The birthday celebration of a king, on the other hand, which was a pagan national festivity, lay under the greater ban (see *'Abōda zara*, i. 3, and Excursus 2, p. 19 ff., in W. A. L. Elmslie's edition of the tractate [*TS*, vol. viii. no. 2], who, however, defends an unacceptable construction of the Hebrew text instead of taking יום גנוסיא to signify the day of the Cæsar's apotheosis).

which arose from his book. He had a Schloss at Montquintin on the Rhine. He died here on 2nd Sept. 1790, and was buried in the crypt of the Church of St. Simeon at Trier. In 1803 that church was desecrated, and his body was removed to St. Gervasius in the Neugasse, where it now lies. He left a number of foundations for various charities in Trier.

2. **Writings and system.**—Hontheim was the author of a number of works. He is said to have written the lessons of the local Trier breviary (since abolished). F. X. Kraus doubts this, as they do not at all represent his ideas (*Allgemeine deutsche Biographie*, xiii. 83). He deserves well of German historians for his *Historia Trevirensis diplomatica et pragmatica* (3 vols., Augsburg and Würzburg, 1750) and *Prodromus Historiæ Trevirensis* (2 vols., do. 1757). But the work to which he owes his fame is the *Febronius*, published in 1763. It is said that the interference of the Papal Legate Doria at the election of the Emperor Charles VII. (1742–1745) first gave him the idea of writing a work which should distinguish the political from the ecclesiastical power of the Pope. He chose the pseudonym 'Justinus Febronius' from the name of his niece, a nun at Juvigny, in religion Justina Febronia. The MS was taken by his friend von Krufft to a bookseller, Esslinger, at Frankfurt am Main, who promised the strictest secrecy as to the real author, and did not pay any fee for it. In order to keep the secret, an imaginary publisher and place were printed on the title-page. The work appeared as: *Justini Febronii Jcti* (= iurisconsulti) *de Statu Ecclesiæ et legitima potestate Romani Pontificis liber singularis ad reuniendos dissidentes in religione Christianos compositus;* Bullioni apud Guillielmum Evrardi, 1763. The main idea of the work is that the power of the Pope should be reduced and that of the bishops increased; the Christian princes should see to this. There is nothing new in it. The ideas are those of du Pin, Richer, Van Espen, and the Gallican school. It puts these clearly, forcibly, and in a moderate compass. The author declares that, so far from opposing the Papacy, he wishes only to strengthen it by fixing its just limits. Thus he hopes to reconcile Protestants and bring them back to union with the Pope. He dedicates his work to the Pope Clement XIII. (1758–1769), 'summo Pontifici, primo in terris Christi vicario,' to Christian kings and princes, the bishops and doctors of theology and Canon law.

There are nine chapters. Ch. i. ('De exteriore forma regiminis quam in sua ecclesia Christus Dominus instituit') begins by interpreting Mt 16^{18}, Jn $20^{22f.}$, as not applying to the Papacy. The form of the Church is not monarchic, the 'keys' are given by Christ to the whole Church; all Apostles were equal, though Peter was primate; the Council of Trent did not declare the Church a monarchy; the infallibility of the Pope ('ultramontanorum doctrina') is not recognized by the Church. Ch. ii. ('De Primatu in ecclesia et genuinis eius iuribus') establishes that there is a primacy by Divine right, for the sake of unity. The Pope is the guardian of the Canons for the whole Church. He can make laws 'in the name of the universal Church,' and has a *principatus*, not of jurisdiction but of order and *consociatio*. Ch. iii. is entitled 'De incrementis iurium Primatus Romani, illorumque causis tum fortuitis et innoculis, tum sontibus.' Many Papal rights have been acquired by devolution; these are no part of the *ius ordinarium*. The False Decretals totally modified the external government of the Church. The Roman Curia must be distinguished from the see. Ch. iv. ('De causis quae vulgo maiores vocantur') describes how these came to be reserved to the Pope. Questions of faith are not reserved; any bishop may condemn heresies. Local synods may re-examine doctrines condemned by Rome. The confirmation and deposition of bishops, erection of new sees, and so on, are rights of the Metropolitan. Cardinal Orsi is quoted against the monarchic claims of the Pope. Ch. v. discusses the right of making laws for the universal Church and the question of appellations to Rome. Lk 22^{32} does not apply to the successors of Peter. Papal laws are not binding till they are promulgated in each province by the Metropolitan. Gratian and other collections of canons have only the sanction of custom. 'A wide authority,' but not jurisdiction in the strict sense, over all Churches belongs to the Roman Pontiff. Ch. vi. ('De Conciliis generalibus') declares that no Divine or ecclesiastical law reserves the summoning of General Councils to the Pope; the first eight were convened by the Emperor. A General Council is above the Pope. He may not re-examine its decrees; but many Councils have re-examined decrees of Popes. It is lawful and often expedient to appeal from the Pope's decision to a future General Council. A General Council should be summoned now, as soon as possible, to reform abuses. Ch. vii. establishes that bishops have their jurisdiction not from the Pope, but directly from God. The Pope has no real jurisdiction over other bishops. The immunity of regulars from episcopal jurisdiction is a grave abuse, a 'hard and undeserved wound' to the rights of the ordinaries. Ch. viii. ('De libertate ecclesiae, eiusque restaurandae iure et causis') is about the False Decretals. These destroyed the liberty of provincial Churches, and are the source of the Pope's excessive power and the main impediment to the reunion of Christendom. Ch. ix. declares that Roman Catholics must carefully watch every step of the Roman Curia which may be hurtful to right law. The best remedy would be to summon without delay a free General Council. An agreement of all Roman Catholic princes and a common constitution promulgated by them would be the best way of securing this. Nor need any one fear the censures of the Pope; there is no danger of a schism. The princes should arouse popular feeling against the False Decretals. The end of the book sums up its whole purpose thus: 'It is the interest of the Church certainly to maintain the primacy, but to keep it within proper bounds.'

An obvious criticism of this famous work is that, like many reformers, its author is carried by his principles too far to have any chance of being heard by authority, perhaps further than he himself foresaw. Certainly it was not difficult for his opponents to quote from his book passages which were scandalous to Roman Catholic readers, as coming from a Catholic bishop. F. X. Kraus, who is sympathetic to Hontheim, admits that 'the *Febronius* contains things which must seem highly suspicious even to a very liberal Roman Catholic, if he remains a Catholic at all' (*op. cit.* xiii. 89).

3. **The controversy.**—The book at once excited enormous interest throughout Europe. A second edition was called for in 1765 and translations appeared immediately in German, French, Italian, Spanish, Portuguese. The effect of Hontheim's principles was soon seen. In 1768, Venice declared that the bishops have jurisdiction over all regulars throughout its territory; the Neapolitan Government abolished the rules of the Roman Cancellaria in that kingdom; Maria Teresa allowed similar laws for the Duchy of Milan. In Portugal the Bishop of Coimbra, who had forbidden the book in his diocese, was forced by Government to withdraw his order. Especially throughout Germany was the effect of the *Febronius* long felt, in spite of its repeated condemnation by the Pope and German bishops. The complaints against the Curia made by the legates of the three episcopal Electors at Coblenz on 13th Dec. 1769, the 'Emser Punktat' in 1786, and much of Joseph II.'s (1780–1790) legislation are influenced by it. In Italy the Synod of Pistoia (1786), and Leopold of Tuscany (1765-1790) follow the same principles: so that most of the later so-called Gallican movement throughout Europe found in *Febronius* a guide, or an expression of its principles.

Meanwhile the book was condemned at Rome and attacked by a great number of opponents. As soon as it appeared, it was denounced by the Nuncio (Cardinal Borromeo) at Vienna; on 27th Feb. 1764 it was put on the Index by Clement XIII., who on 21st May wrote an encyclical to the German bishops telling them to suppress the book in their dioceses (these are reprinted in Roskovány, *Romanus Pontifex*, iii. 234–240). Nine obeyed, including Clemens Wenzeslaus of Trier; sixteen took no step either way (letters of German bishops condemning the book [*ib.*]). In July the Archbishop of Vienna had heard that the book was being read with approval by the princes at court; he ordered it to be destroyed wherever found (*ib.* 238). Clemens Wenzeslaus still did not know, or affected not to know, who was the author. He condemned it as 'a poisonous book which has appeared under the unknown name of Justinus Febronius' (*ib.* 242 f.).

Among the many writers who entered the lists against Febronius, the most noticeable are F. A. Zaccaria, S.J. (*Anti-Febbronio . . . o sia apologia polemico-storica del primato del Papa*, Pesaro, 1767, and *Antifebronius vindicatus*, do. 1772),

P. Ballerini (*de Potestate ecclesiastica Summorum Pontificum*, Verona, 1768), and the archæologist T. M. Mamachi (*Epistolarum ad Justinum Febronium . . . libri tres*, 3 vols., Rome, 1776–1778). Hontheim answered his critics in four more volumes under the same title (Frankfurt and Leipzig, 1770, 1772, 1773, 1774); in 1777 he published a *Febronius abbreviatus*.

At first the secret of the authorship was well kept. But in 1764 it began to leak out, apparently through Hontheim's friend Garampi. Pius VI. (1775–1799) insisted on a retractation, and Clemens Wenzeslaus in 1778 began to urge Hontheim to withdraw. Apparently he threatened, in case of a refusal, to dismiss not only Hontheim himself, but all his relatives as well, from his service. On 14th June 1778, Hontheim sent an incomplete retractation to the Elector, although he still defended 16 propositions which the Elector's theologians had declared heretical. Neither the Elector nor the Pope was satisfied with this, and a formula of entire retractation was presented for Hontheim's signature. After much discussion he signed it, with one modification, the erasing of the sentence: 'Wherefore rightly the government of the Church is called monarchic by Catholic doctors.' The Nuncio accepted this. On 2nd Jan. 1779, Pius VI. published a Brief announcing the retractation. Hontheim was much annoyed by the public announcement (though it always follows, and he had received no guarantee to the contrary), and in letters to his friends began to complain of the way he had been treated. So the idea spread that he had not really meant to retract at all. On 7th April 1780, he published in the *Coblenzer Intelligenzblatt* a statement that he had retracted freely and was about to publish a defence of his retractation. This appeared at Frankfurt in 1781 under the title: *Justini Febronii Jcti Commentarius in suam retractationem Pio VII. Pont. Max. Kal. nov. an. 1778 submissam.* In this work he so explained his action that it was plain that he still held the ideas condemned. So the Roman Curia declared itself not satisfied, and the dispute began again. From now to the end of his life Hontheim showed a curious vacillation. In 1781 he wrote to the *Hamburger Zeitung*:

> 'The world has read, tested, and approved the statements of my book. My retractation will no more persuade thoughtful men to reject these statements than will the many refutations written by pseudo-theologians, monks, and flatterers of the Pope.'

On the other hand, in 1786 he wrote against the 'Emser Punktat,' which only echoed the ideas of the *Febronius*. Towards the end of his life he seems inconsistent and perhaps wilfully ambiguous. He did not actually incur any censure, and died in union with the Church. The effect of the *Febronius* lasted intermittently in Germany into the 19th century. J. V. Eybel took up its ideas to fortify the policy of Joseph II. (*Was ist der Papst?* Vienna, 1782). The final blow to Febronianism was given by the Vatican Council in 1870.

LITERATURE.—Krufft, 'Hist. de la vie de J. N. de Hontheim,' in Otto Mejer, *Febronius*, Freiburg, 1885; F. X. Kraus, 'Hontheim,' in the *Allgemeine deutsche Biographie*, Leipzig, 1881, xiii. 83–94; *Briefwechsel zw. weiland Ihrer Durchlaucht dem Herrn Churfürsten von Trier, Clemens Wenzeslaus, u. dem Herrn Weihbischof, Niklos v. Hontheim, über das Buch Justinus Febronius, u.s.w.*, Frankfurt am Main, 1813; A. de Roskovány, *Romanus Pontifex tamquam Primas ecclesiæ et Princeps civilis e monumentis omnium sæculorum demonstratus*, Nitriæ et Comaromii, 1867, tom. iii. pp. 234–240.

ADRIAN FORTESCUE.

FEELING.—**1. Definition and scope.**—The equivocal term 'feeling' is now the accepted designation of states of consciousness viewed as agreeable or disagreeable. We have sensations, and they are pleasant or unpleasant; we have ideas, and their presence in the mind creates pleasure or pain; we carry on activities, and along with them goes a glow of delight or a mental disturbance or aversion. The experiences through which we pass create melody or discord, and we are aware of it. Abstracting the hedonic aspect from its sensational, intellectual, or volitional accompaniment, as we do whenever it preponderates, we call the state of consciousness one of feeling. The characteristic marks, then, of the feelings are these two: pleasure and pain (in a somewhat broader and more technical sense than popular use attaches to the words), and pure subjectivity, as being simply states of the self, and wanting the objective reference implied in knowing and in willing. Among the feelings, we generally mark off the emotions (affections, passions, sentiments) as at once the most extensive and the most important class.

It was long customary to regard the distinction of intellect and will—the contemplative and the active powers—as exhaustive, feeling being regarded as merged in impulse, desire, and volition, and the emotions as complex products in which cognition and appetency blend; and to this view some still adhere. But, whether we consider the dual or the triple division of mind as psychologically the more exact, it must be admitted that feeling is so unique a fact, and that the feelings are so impressive, bulk so large in consciousness, and are so important for human life, that it has become imperative to give the exposition of feeling a place of co-ordinate rank with that of knowing and of willing. In days past, when the struggle of life was more arduous than it is now, and when men had to gather all their energies for a swift and vigorous reaction on circumstances, feeling was readily lost in impulse and volition, and men had little inclination to view it in abstraction from activity, or to give it an independent value. It is otherwise now, as, among other symptoms, the modern novel proclaims; although even now, in circles where life is hard and stern, feeling is apt to be viewed as an intruder.

The importance of feeling may be realized by a moment's consideration of the consequences of its withdrawal from consciousness. Were we incapable of pleasure and pain, of joy and sorrow, were nothing good in our eyes and nothing evil, we should be as stones, nothing could have any value for us, no event any interest, and life would be bereft of all significance. We familiarly speak of an apathetic man as *dead*. It is only because we are capable of feeling that we are interested in ourselves, or interested in each other, or have any questions to put about life and the universe, or have any reason for desiring any one event to come to pass rather than another. It is feeling that stirs to action the whole animated world. Yet we are not thus laying a basis for hedonistic ethics; for behind this fact of pleasure and pain lies the impulse of self-conservation and self-development, which, setting us in movement, conducts us to the tree of the knowledge of good and evil, the eating of whose fruit starts the tale of man's life. In the case of animals, pleasures and pains receive simply a quantitative valuation, and, as such, absolutely rule their doings; but in the case of a self-conscious being, who can make objective all the contents of his reason, and look before and after, pleasures and pains are valued relatively to his whole complex nature both individual and social, and to that ideal end which gives law to all conduct. Self-conscious desire is a different thing from appetite. Pleasure and pain remain mighty factors in our life, although not sovereign masters prescribing even the moral law of conduct; they are the condition of life having value, but not themselves the standard of value.

2. Classification.—The feelings naturally fall into two classes, according to the nature of their base; that is, the nature of that to which they attach, and from which they rise. (1) There are

feelings that have *sensations* for their base—sensuous, or *sensation*-feelings, *e.g.* the pleasureable feelings arising from the taste of food, from the odour of flowers, from the light of day or the blue sky, or from the healthy functioning of the organism; or the painful feelings arising from gloom or weariness, or jarring sounds. (2) There are feelings that have *ideas* for their base—such as may arise from presentation of an object to sense (such as the sea or the rising sun) when it also conveys a rush of ideas; or such as may arise in the activity of memory, and the constructive imagination. Examples are hope, fear, melancholy, jealousy, moral approbation, the sublime. This class of feelings is commonly distinguished as the emotions.

This distinction between the feelings that have sensations for their base and those that are based upon ideas seems clear, and it is certainly serviceable; but it cannot be pressed too absolutely. In some cases there seems to be a certain representative element present where we might imagine there was only sensation—for example, in the feeling of disgust which is generated by seeing or touching some natural objects, and which is due in all likelihood to association and teaching. Again, a sensation-factor seems to attach even to the highest emotions, as in the sense of warmth suffusing us in the presence of the beautiful, or in the thrill we feel in the presence of the sublime. It must also be noted that the feelings of joy and sorrow, hope and fear, elation and depression, and others, are generated by stimulants and drugs, or even by the secretions of the body, as surely as by ideas—with the qualification that the result in the former case is rather an emotional mood or frame than a definite emotion. Nevertheless, we hold by the useful distinction between feelings that adhere to sensational experiences purely as such, and feelings that, even if they involve sensation, arise in connexion with some further activity of ideation. The presence or absence of an ideational factor furnishes, if not a quite exact, yet a serviceable, principle of arrangement.

(1) Before passing to the emotions, as much the more important, we devote a short space to the *sensation-feelings*. They are our earliest feelings, and belong even to our pre-natal life—and who can tell with what important consequences? They are universal, or common to all men. They are habitual. They sum themselves up into an important aggregate of happiness or misery. The feelings arising from the organic sensibility alone will suffice to bathe the consciousness in sunshine or smother it in gloom; they mainly determine the mood or temperament, and thus tell upon the formation of character. We scarcely realize all we owe of life's joy to the senses—to the song of birds, to the rippling of water, to the common light, to the colours of the earth and sky, to pleasant odours, and the taste of food. Nor do we realize as we ought how ugliness and gloom, a blackened sky, blasted vegetation, a poisoned atmosphere, and all agencies that create sensuous pains, not only make life an oppression, but also degrade and tend to crush the soul into pessimism and atheism (for good statements on the subject of sensuous feelings, see Höffding, *Psychology*, Eng. tr., 1892, pp. 221–233; also Dewey, *Psychology*, New York, 1887, ch. xi. pp. 250–261).

(2) On proceeding now to the *emotions*, it would serve no purpose to enter on the question of classification. There is no agreement among psychologists, nor need any be expected. The emotional life grows and expands like a tree; and can we logically classify its branches? (Any one interested in the question will find a good resumé of methods of classification in Appendix B of Bain's *Emotions and the Will*; also in Sully, *The Human Mind*, 1892, Appendix I. vol. ii.) It will be found more instructive to enter on a consideration of the more prominent characteristics of the emotional life.

(*a*) The first point arresting attention is the *number* of the emotions. It would not be difficult to enumerate scores for which we have names; and we give names only to the more common and more prominent. There is a fleeting vagueness about many emotional states, which makes them as difficult to grasp or name as the sensations of the viscera. It is curious that in certain languages emotions have received names that are untranslatable into other tongues; for example, we have no equivalent for the German *Gemüthlichkeit*; and it is said that no other language has an equivalent for the Scotch word 'eeriness.' Further, each one of the more familiar emotions runs through a gamut of modifications or subdivides into several species. Thus, in the æsthetic emotions, we have the pretty, the graceful, the elegant, the lovely, the picturesque; in the emotions of the ludicrous, we have the witty, the humorous, the funny, the grotesque. Thus, fear becomes alarm, terror, despair; anger becomes resentment, indignation, rage, fury; joy becomes brightness, gladness, cheerfulness, delight, rapture, ecstasy. Probably every modification of consciousness has its own modification of feeling. Language is too scanty to express them all, and is also too rough and coarse; we require to have recourse to music. The human soul is as subtle in its responses of feeling as the thermo-electric pile in relation to degrees of temperature.

(*b*) We may next observe the manner in which the emotions *ramify* in the mental life. As an example, we may take the familiar emotion of fear. We can trace its presence in the religious feelings of reverence, awe, and adoration. It enters into the composition of the emotion of the sublime. According to Kant at least, it belongs to the sense of duty. In timidity, anxiety, diffidence, suspiciousness, caution, prudence, bashfulness, it requires but little insight to detect its colouring. It acts as a check on conceit and arrogance. Superstition, bigotry, and intolerance would more readily slacken their hold, but for fear. The emotion of fear, like all other simple feelings, is in itself neither good nor bad; but it may enter as an element into the very worst and very best qualifications and activities. Similarly we might trace the ramifications of hope, pride, or anger.

(*c*) It is more than doubtful whether there is any fact in mind that can be properly expressed as 'psychical chemistry'; but the nearest approaches to it seem to be found in the emotional life. The emotions *compound* themselves; and there emerge new products, which have all the aspect of ultimate simplicity, until, turning an analytic gaze upon them, we force them to disclose their elements. One of the simplest examples is found in melancholy, in which the pain of regret for loss so fuses with the pleasure of recollection of possession, or the pain of self-commiseration so fuses with the pleasure of self-congratulation, that there emerges a new type of feeling—unpleasant, and yet so pleasant that men will even nurse it with tenderness. A somewhat more complex example is found in jealousy, in which the joy and pride of possession, the fear of loss, anger, indignation, rivalry, all blend to create a remarkable new form of emotion of tragic potency. A more notable example is found in the passion of love. The analysis of its components, as given by Spencer (*Psychology*[2], 1870–72, i. § 215), will be found a marvel of acumen.

(*d*) The emotions, however, do not always fuse. They sometimes even *conflict*. They influence each other in the most various ways. The question as to the result where two or more emotions press on consciousness simultaneously merits examination. (*a*) Like emotions combine easily and enhance each other. Thus, there is apt to be an easy fusion of disappointment, vexation, anger, envy, and malice; or of success, generosity, kindness, courage, and pride. One hardly expects a generous donation from an angry and disappointed

man; but one may readily obtain it when he is elated with the joy of success. Homogeneous emotions not only fuse easily, but in doing so enhance and inflame each other—although this is more observable in the case of the asthenic than of the sthenic emotions. When a man is already down, a slight addition of sorrow may readily prove the last straw; and in the presence of some new trial, in itself not insupportable, he will cry out, 'All his waves and billows have gone over me.' (β) Some emotions are contradictory, and related like salt and sweet, which never blend. Love and hate, arrogance and humility, laughter and devotion, ludicrous contempt and reverence, exclude each other, and do so in proportion to their intensity. Yet they will sometimes press simultaneously on consciousness. King Arthur loves the fallen wife at his feet, while, at the same time, he is inspired with anger and indignation. A friend will sometimes provoke at once our admiration and our contempt. A merchant will be in grief over business losses and in joy over the birth of an heir. An ass has been known to bray at the church door while the congregation was engaged in prayer. What happens? If we could suppose the conflicting emotions to be of equal strength (which is probably never the case), they would simply neutralize each other. It commonly happens that the one supplants the other, as when a ludicrous idea makes devotion impossible; or, if it cannot quite supplant the other, there takes place a trial of strength and a rapid and distracting alternation of moods. We try to end the turmoil by going in search of reinforcements of the emotion we desire to prevail. (γ) There is a third case. Emotions may be simply different, although not contradictory, related like bitter and sweet: for example, joy and the ludicrous, humility and hope. In this case, the result is various and uncertain. If the one feeling is weaker than the other, the predominant emotion absorbs the other, and converts it into itself, while yet receiving from it some modifications. Thus, the self-confident courage with which a speaker advances to an audience is sometimes met by the different feeling of alarm when facing it; and the ordinary result is that his courage is toned down, and the speaking improved. A man does not speak the better for over much confidence and excessive coolness. (On this interesting section of the emotional life, the reader may consult with advantage Hume on the *Passions*, pt. iii. § ix., also his *Dissertation on the Passions*, especially in §§ ii. and vi.; Höffding, *Psychology*, p. 238; various sections in Bain, *Emotions and the Will*).

(*e*) The method of the *spread* of the emotions seems next to demand attention. The main instruments are the laws of contiguity and similarity. Let M stand for an emotion, and C for its cognitive base. But C is connected by contiguity with D, E, F, fuses therewith, and forms the unit CDEF. M now spreads over that larger complex unit. Thus, if a man loves a woman, he is apt also to love everything connected with her, even her very raiment, and the ground on which she stands. A similar expansion takes place by similarity. We are here in presence of a weighty factor in human life, and one of extensive application. Thus, Palestine became the *Holy* Land by virtue of our reverence for Him who lived and died there, extending itself to the very soil with which He was contiguous. Thus, such an emotion as patriotism is created; the colonist, after long years, still turns with longing heart to the hills and rivers associated with parents, friends, and the happy days of youth. Sometimes there result tragic consequences. A man with a bad conscience hates himself; and, as he can never be parted from the self he hates, the odious thing becomes contiguous with all things he sees or handles, with all places he visits, with all associates and all occupations; a dark shadow falls everywhere, he becomes a cynic and misanthrope, and comes to hate existence and curse the universe. Another tragic example may be found in the irrational hostility of renegades and apostates to the creed they have cast away; for the hostility is not proportioned to the logical grounds of the rejection, but to the misery associated with a former belief. Thus do our own emotions, by their tendency to diffuse themselves, colour the universe, making it, perchance, a temple of God or a pit of blackness.

(*f*) Turning our eyes in a somewhat different direction, let us next note the conspicuous fact that the *emotions of the soul are always correlated with commotions of the body*, although in smaller degree in the case of the higher or more intellectual emotions. There is no doubt a correlation between every form of mental life and the physical organism; but it does not obtrude itself as it does in the quickened or impeded pulsation and breathing, the stir in the abdominal viscera, that attend anger and fear, joy and sorrow. This 'somatic resonance' of the emotions is marked in their popular location in the heart, and was more reflected in Oriental speech, which located them in the liver, bowels, and kidneys. A paradoxical doctrine has even found some acceptance in recent years, to the effect that the bodily commotion reported in consciousness constitutes the emotion: that we do not tremble because we are afraid, but are afraid because we tremble, and similarly that we are sad because we weep. Nothing, however, has been adduced at all likely to upset the judgment of common sense that the bodily movement follows as the effect of the mental disturbance. Some bearings of the physical reverberations of the emotional life are important. The undisciplined make no effort to guide or control these movements; like children, they have no stillness and cannot veil their feelings. But we have means, direct and indirect, of determining the direction and measure of the physical excitement. The possession of this skill is part of the self-control so requisite in social intercourse and in the management of affairs. Courtiers and actors show to what perfection it can be brought, and how it gives authority to a man's bearing, and grace and dignity to manners. It is also part of the discipline by which the explosive and impulsive will is converted into the rational and deliberate will of the moralized man. Let us note, further, that the 'somatic resonance' of the emotions explains their bearing on health and life. There are authentic records of sudden death through the abrupt irruption of glad or of evil tidings. There are also those that are pining away into early graves through the starving of the emotions, and to whom love and hope would come as the very breath of life, restoring health and youth. Faith-healings and kindred phenomena show what wonders can be wrought when the emotional thrill discharges itself into all parts of the body through the nervous mechanism.

(*g*) We have next to note the fact that the various emotions are correlated with *definite* bodily movements, and that each has its definite and characteristic expression. From the aspect of the face and attitude we can tell that a man is deep in thought or is fixed in purpose; but we cannot tell what is the thought or resolution. In the case of the emotions, however, we can tell at once the fact of feeling and the definite nature of the feeling. We have familiar examples in the blush of shame, the pallor of fear, the clenched fist and dilated

nostrils of rage, the drooped eyes and downward curved muscles of sadness. So close is this correlation that, by assuming artificially the physical attitude or the expression of an emotion, we can in some measure induce the emotion, and by suppression of its expression to some extent destroy the feeling, as when we half conquer a man's anger by persuading him to be seated.

Since Darwin's time and the publication of his *Expression of the Emotions* (1872) there has been much interesting discussion on the genesis of the various emotional expressions. There is force and truth in many explanations adduced, along with not a little that is fanciful or even grotesque (for illustrative examples, see Spencer, *Psychology*, ii. §§ 494–501).

(*h*) The *function* of the emotions is to serve as the connecting link between the intellect and the will, and to furnish us with springs of action. Aristotle (*Ethics*, vi. 2, § 5) uttered a weighty truth when he said, 'Intellect moves nothing.' Ideas, simply as such, have no more power to touch the will than our percepts have. Truths that have no inherent fitness to create feeling never become springs of action; no man ever did anything simply in virtue of his knowledge of algebra. Doctrines, howsoever great and important, never have the smallest real influence on life, unless they become incandescent, and kindle a fire in the heart; the world has seen immoral philosophers, and undevout theologians. It is always emotion that mediates, and translates thoughts into deeds. Victory will always be on the side of the principles that can commend the strongest and most persistent enthusiasm. Nothing great was ever yet accomplished by a man incapable of intense feeling. The practical bearings of this principle are numerous. We single out these two: (*a*) we do violence to our nature, and demoralize ourselves, if we do not use emotions as the impetus to conduct, or if we permit ourselves to cultivate them simply for the luxury of having them; (*β*) we need not in any case expect too much from mere teaching and preaching. If a man is already under the power of any emotion or passion, we shall not rescue him unless we succeed in creating a yet stronger emotion or passion; and the creation of this 'potential' is the supreme difficulty in all attempts at moral reformation (cf. Chalmers' Sermon on *The Expulsive Power of a New Affection*).

(*i*) 'The *inertia* of feeling' is a fact of far-reaching consequence. 'The imagination,' says Hume, 'is extremely quick and agile, but the passions (emotions) in comparison, slow and restive' (*Dissertation*, § 3). We can pass with ease and rapidity from one object of thought to another, and from one kind of mental activity to another; and, when we cannot do so, some harassing feeling is the cause; but, as every one knows, we cannot thus rapidly and easily pass from melancholy to gladness, from ill-temper to serenity, from despondency to hopeful courage, from the comic opera to the church. Our emotions detain us; they drag; they move heavily. Hume has happily compared emotions to a stringed instrument that continues to vibrate for a while even after the impulse has ceased, while cognition is like a wind instrument. It follows that emotion is in some respects a hindrance and in other respects advantageous to the movement of thought. The emotion that cleaves to a thought will not move and yield so readily as the thought, and may, therefore, cause a memory to haunt us, from which we desire to be free, and drag a belief back on our mind long after its logical hold has been loosened or destroyed; but we have the compensation that, once a new conviction has been lodged in us, and has been well saturated with emotion, it becomes thereby a possession of which we cannot be easily deprived. Intellect is apt to be a disintegrating force in human affairs; emotion alone welds strongly, and perpetuates securely. Emotion is the slow conservative side of human nature, the custodian of old ideas, old customs, and old institutions. Emotional natures, with strong loves and hates and ardent attachments, are apt to be most conservative; thus, women, as a rule, are more conservative than men. Cold intellectual natures, whose principles are not saturated with feeling, have no difficulty in following out a doctrine to its applications and hearkening to the bidding of logic; they therefore change easily, and are apt to wonder that the world is so slow and irrational. But ours would be a worse world, and not a better, were there no such thing as the inertia of emotional attachment. The inertia of feeling may be used to explain the persistency of character compared with the instability of opinion; also the inevitable relapses and reactions following on too many and too violent changes of habit or thought, whether in the case of individuals or in that of communities: and also, the perpetual bribing and corrupting of the intellect by emotional prejudice.

The doctrine just inculcated may seem to be inconsistent with the undoubted fact that emotional natures are also most impulsive and headlong—the very reverse of conservative. But there is no inconsistency. Emotional natures, having the warmest attachments, are, no doubt, on this very account, with greatest difficulty loosed from their moorings; but *once set in movement they are apt to go farthest.* We may find a good example in the 'perfervidum ingenium Scotorum.' The Scottish people are wedded with intense passion to their own traditions, and move from them with deep reluctance; but what people has gone so far in its reactions and reformations? Nor can Scotland abide compromise in Church and State, after the manner of the English people, on whom that habit sits so lightly, and who find it so useful. The story of the French Revolution might furnish other examples.

(*j*) The ethical importance of the emotions appears when we consider their *relation to character.* It is patent that the springs of conduct lie among the emotions, in emotional dispositions, and in complex emotional formations. Men act from hope and fear, love and hate; from love of money, power, knowledge, distinction; from kindness, sympathy, or perchance from malignity and misanthropy. When we describe the character of men, we, for the most part, do so in terms taken from the emotions; we speak of them as timid, gentle, irascible, sanguine, affectionate, cold-hearted, sentimental. No doubt, we also speak of moral character in terms of intelligence, as when we praise a man for prudence, discretion, and considerateness; but even in such cases we have in view types of intelligence created by a habitual preference for certain forms of emotion. Thus, the prudent and cautious man has had his habit of judgment formed by the emotions that have reference to evil and pain. We also speak of moral character in terms of will, as when we praise a man for being patient, resolute, manly. But here also we have virtues formed by prevalent emotions; for example, the morally resolute man is possessed by a feeling of self-respect, honour, sense of duty, and hatred of meanness and cravenness. A man's moral character is the resultant of his controlling emotional habits and proclivities, and of the ways in which they combine and co-operate. Commonly there are a few emotions of one type; indeed, not infrequently one emotion, potent above all others in a man's soul, gives colour to his whole life and character. Thus the miser is made; thus the recluse; thus the philanthropist. We do nothing to determine a man's life and character unless we can touch his heart. The most potent weapon in a man's hands is power to send an emotional thrill through the soul and kindle the glow of enthusiasm. Eros is King; and the enthusiasms of youth, the most fervent kindlings of emotion, make men what they become.

(*k*) The relation in which emotion stands to *religion* cannot be neglected; and, clearly, it is an intimate one. It is the heart that pants for the

possession of religious life, even when the search takes the ostensible form of a longing to penetrate the mystery girding us, and to comprehend the use and meaning of our existence: for how could any such desire awake in us except for a longing to be rid of the feeling of dreariness and worthlessness, and to be able to rejoice in the conviction that life has value? The possession of religion comes to a man as a new emotional experience; as a deepening, expansion, and purification of his feeling; as a power to rejoice in his conscious existence as an inestimable gift of the Creator; as freedom to look abroad over the world with peaceful eyes made glad with love and hope; as a consciousness of inward nobility raising him above the world's vanity; as a new self-consciousness springing from a heart purged from the foulness of a bad conscience; as a revelation of a new capacity for praise and adoration. The religion portrayed in the Psalms and Epistles is a life glowing with emotion; and nowhere else in literature have we any such record of emotional experience. If we compare such Psalms as the 88th and the 103rd, we see how this emotional life has an incomparable depth, and passes from deepest sadness to highest rapture. A religion of this sort requires no evidences. It is like salt, or light, or the aroma of an ointment. It fascinates like a charm, and spreads itself like a contagious enthusiasm. Of this sort was Christianity meant to be: such it was in the beginning; and such will it be again some future day. But emotion cannot feed itself, nor can it support itself. The *summum bonum* revealed in immediate feeling demands reconciliation with the *summum verum*: and here all our difficulties in dealing with religion begin. The experience of the heart enwraps ideas that we have great difficulty in making clear and stable, and in bringing into harmony with the facts of life and the world. The correlated creed has never yet been able to make itself more than just a *reasonable faith*, and in its details has never risen above the fogs of controversy. Nevertheless, no one who has truly experienced the religion of emotion can doubt that it is the greatest and best that can ever enter into the life of man, and that its necessary implications must needs be true.

Our attention is arrested by the fact that there is to be found a fervent emotional religion without moral purity and without stable religious character. This was so often brought under his notice in connexion with revivals that Jonathan Edwards (*q.v.*) wrote his memorable book on *The Religious Affections* in order to set forth the marks by which to discriminate between genuine and spurious religious emotion. But no empirical tests are available; and the outcome of his effort is simply to show that religion must enwrap intelligence and volition as well as emotion—must root itself in enlightened conceptions, and take form in a holy walk and conversation—must grasp consciousness in the unity of reason. It is so; but it deserves, nevertheless, to be made emphatic that religion is centrally an *emotional* experience. Otherwise it is formalism. We thus reduce Dogma, Ritual, and Church to their rightful position of subordination.

(*l*) We are naturally conducted to the question whether emotion can ever be accepted as *a ground of judgment, a basis of belief, and a test of truth.* Emotion is, without doubt, a cause of belief; but a cause of belief is not necessarily a ground or reason. There are cases in which all would admit that emotion must be peremptorily excluded, as, for example, in a judicial trial, and generally in all purely scientific work. It has, however, been held that there are certain cases in which emotion may sit in judgment on truth and error, especially in moral and religious questions. That 'the heart has a logic of its own' is a sentiment preached in many a discourse. Tennyson tells us, in well known lines, that, in virtue of having felt, a man may justly rise in wrath against the freezing reason, that is, the critical understanding, and with superior authority silence it (*In Memoriam*, cxxiv.). In a similar vein Jacobi says, 'There is light in my heart, but, when I seek to bring it into the understanding, it is extinguished'; and pronounces the verdict on himself, 'a heathen with the understanding, but a Christian with the spirit' (quoted in Überweg's *Hist. of Philosophy*, Eng. tr.[2], 1875, ii. 200). The heart, then, has a co-ordinate title with the judgment to say Yes or No, on a question of truth; nay, a superior title. A writer on Browning says of him that in his poems he assumes that 'love, even in its illusions, may be accepted as a messenger of truth' (Orr, *Handbook*, 1885, p. 337). Right through all the forms of Mysticism there runs a doctrine of this sort. We have before us an example of the fact that, for popular literary purposes, forms of speech may be allowed which are psychologically incorrect. It cannot be correct to speak of emotion as judging of truth and error. We might as well speak of the eye hearing music, or set ourselves to measure feelings with a foot rule. Nothing can judge of truth and error but the logical understanding. Nevertheless, there is truth and meaning in such words as 'The heart has a logic of its own,' and in Tennyson's lines. It is true that there come trying hours when our heart moves us to affirm what our head urges us to deny, or in which arguments point to a conclusion that is repugnant; and occasionally it may well be the case that the instinct of our emotion is found in the end wiser than our logic. The mind is often guided by an implicit logic, vaguely conscious of the pressure of arguments which it is unable to formulate, but which it will readily recognize when expressed by a clearer and more vigorous understanding; and, in such cases, the first appearance is as if emotion alone judged. When emotion seems to judge in moral and religious matters, it is found that the process is one of deductive reasoning assuming as true some such major premiss as 'No doctrine can be true which robs existence of worth and meaning,' or 'The Universe is at bottom wise and good and rational'; and every proposition is straightway rejected that is or involves the contradictory. Further, it is true that all men are not in a position to sit in judgment on certain matters. A man with no vivid religious experience will show his wisdom by declining to pronounce any judgment on religious subjects; for he wants at once the materials for judging and the capacity for appreciation of the factors; and the demand for a decision in morals and religion is addressed to the Ego in the undivided unity of its powers. The majority of men will never be guided in their belief on the highest matter by learned apparatus, by deliberate critical inquiry, and by explicit logic. They will be determined by emotional proclivities and emotional experiences —'feeling doing the work of thought'—and the simple honest soul is not thus necessarily guided amiss. Indeed, are there any matters in which the groping of unclear emotion does not pioneer the way that logic follows? We *feel* the presence of a new thought before it becomes quite luminous to thought; and the inventor or discoverer *feels* the approach of success before his intellect has quite grasped the desired issue. We *feel* the presence of fallacious reasoning before we can state explicitly wherein lies the fallacy.

(*m*) The *proper wealth of reason* consists in its emotional experiences. We disparage neither thought nor volition in saying that we have lived

only as we have felt. In Schiller's *Wallenstein* we hear Thekla singing:

> 'Ich habe genossen das irdische Glück,
> Ich habe gelebt und geliebt.'

We may generalize the sentiment: we have lived only as we have glowed with emotion; and the hours of intense feeling stand forth in memory as the shining peaks that catch the eye. It was then we learned into how goodly an inheritance God summoned us when He gave us being. It is to be feared, however, that such hours are few, and that the emotional experiences of most men are meagre and within a narrow compass. The more simple emotions, such as love and hate, hope and fear, are known by all men; but the higher emotions seem to remain an unrealized possibility.

> 'One may assert,' says Ribot, 'that these higher forms are unattainable by the great majority of men. Perhaps scarcely one person in a hundred thousand or a million reaches them; the others know them not, or only suspect them approximately and by hearsay. They are a promised land only entered by a few of the elect' (*Psychology of the Emotions*, 17).

There is much to justify this strong impeachment and probably not too severe disparagement.

(*n*) The *intellectual* (or logical) emotions, such as arise in connexion with cognitive activity and gather round the idea of *truth*, seem to be unknown to most men, for only a few lead an intellectual life. They are not pained by inconsistencies and contradictions, are easily tolerant of the absence of order and of logic; nor do they know the joy of the entrance of a new thought, of emancipation from error and ignorance, or of grasping unifying principles. All men laugh, and desire to be made to laugh, yet it does not appear that the higher reaches of the emotion of the ludicrous are very common. The sense of humour, with its subtle combination of quick perceptiveness and genial kindness, is not a universal possession; and the want amounts to a fearful impoverishment of reason. Those who want it neither see nor feel. Their souls become like leather. In rudimentary form all men have some *sense of the beautiful*; and the ornamentation of their bodies, their furniture, and their weapons, on the part of the humblest races, shows us from how deep a root in reason the æsthetic emotion springs. It is no superfluous flourish, but deep as the demand for truth and goodness. Yet a true artistic sense is not yet common; nor can heaven and earth reveal their beauty except to one who can suffuse it all with the inner wealth of his own soul. Probably, the emotion of *the sublime* is among the rarest of all experiences—the incipient movement towards it seldom going beyond a vague sense of the imposing, unless to give way to the feeling of awe and terror. Being important for life and conduct, and incessantly demanded, the *ethical sentiment* exists in considerable vigour. No normal human being is lacking in the emotion of moral approbation and disapprobation attendant on the judgment of conscience, or perhaps an integral part of it; and every man is thus constrained to a recognition of a sacred moral order, of a high worth in human existence, and of a sublime End giving law to conduct. And yet the immorality of the world proclaims the feebleness of the moral emotions. Probably, no man is without the germs of the *religious emotion*. In a sense, all men are religious; and they are also irreligious. We cannot extirpate the religious sentiment; nor can all agencies make it strong and fruitful excepting in elect souls, who serve as an offering of the firstfruits of humanity unto God. Religion flares up in a man's spirit in hours when he realizes his nothingness in the immeasurable universe, his weakness in face of its immensity, his vileness in contrast with some radiant form of purity, his bondage under evil in sharp antithesis to the demand of his reason for supremacy, and in numerous other such experiences of his weakness and want; but the fire is apt to die down again, and a man's religion to become only a pitiful remembrance that once he had a few pious days or hours, and that a rift in the clouds gave him a glimpse of untrodden realms. Truly, there are worlds of possible emotional experience yet to be made our own. We have not half lived out the possibilities of our own souls.

3. It is no part of the plan of this article to enter on the analysis of the emotions in detail. We content ourselves with indicating the most important principles of explanation: (1) the fundamental impulse of self-conservation and self-realization, moving us to make real the ideal possibilities of our nature; (2) pleasure and pain, joy and sorrow, attaching to the successful or thwarted efforts, with desire for and aversion to all objects according as they aid or hinder us—our conception of good and evil being purely anthropocentric; (3) the Laws of Association; (4) the activity of the constructive imagination; (5) the Law of Relativity: that is, every fresh experience has its nature and effect in consciousness determined by the antecedent and contemporaneous circumstances into the midst of which it enters. These doctrines seem to furnish an adequate explanation of the development of the emotional life throughout, and up to its highest reaches. It seems vain to ask, as is done by Hodgson (*Theory of Practice*, i. 137), 'why there are such feelings as pleasure and pain at all, and why, if there are, they should be attached respectively to successful and unsuccessful effort.' We might as reasonably ask an explanation of the combining power of the ultimate chemical atoms. At some point we have to come to a pause and say, We are so made, and our wisdom was not consulted. When we try to imagine any other arrangement, it seems like setting a suicidal self-contradiction at the heart of things, or as if we were asked to combine the bloom of youth with the decrepitude of age.

LITERATURE.—In the older Psychologies, feeling and emotion are handled in a perfunctory manner; in more recent times, most fully and instructively by Sully, Höffding, Baldwin, and Dewey; the sections in Spencer being significant on their own lines. In addition, the student may read with advantage: Spinoza, *Ethics*, bk. iii.; Hume, *Treatise on Human Nature*, ed. Green and Grose, London, 1909, vol. ii., also his *Dissertation on the Passions*, vol. ii. of *Essays*, ed. Green and Grose, 1907; A. Bain, *The Emotions and the Will*, London, 1859; T. Ribot, *Psychology of the Emotions*, Contemporary Science Series, London, 1897; S. H. Hodgson, *Theory of Practice*, London, 1870, vol. i. The best known German works are J. W. Nahlowsky, *Das Gefühlsleben*[2], Leipzig, 1884; C. Lange, *Ueber die Gemüthsbewegungen*, Leipzig, 1887. See also the literature appended to art. EMOTIONS.

WILLIAM SALMOND.

FEET-WASHING.—I. Ceremonial cleansing before worship. —(1) *Jewish*.—The defilement attaching to feet imperfectly protected from the dirt of the highway required to be ceremonially washed away before the priests could worthily approach God (Ex 30^{18-21} 40^{30-32}, cf. 2 Ch 4^{6}). Brazen vessels were placed between the Tabernacle and the altar of burnt-offering, and ablutions therein were absolutely necessary before approach to the service of the sanctuary was permitted. According to Tosefta, *Men.* i., to ensure a thorough cleansing, it was the practice of the priests to wash their hands and feet *twice* in the basin. On Sabbaths and on the Day of Atonement (as well as on 9th Ab) the custom was not so rigorously followed, except in the case of one arriving from a journey (see Lampronti, *Paḥad Yiẓḥaḳ*, Venice, 1750-1887, *s.v.* רחיצה). The Jewish ceremonial law of feet-washing as regards laymen is no longer extant. The Temple ritual for the priests is referred to in Philo (*Vita Mosis*, iii. 15: πόδας μάλιστα καὶ χεῖρας ἀπονιπτόμενοι), and in Mishn. *Tamid.* i. 4, ii. 1 (see Surenhusius,

Mischna, Amsterdam, 1698–1703, v. 284–310; Ugolinus, *Thesaurus*, Venice, 1744–69, xix. 1467–1502; Schürer, *HJP* II. i. 278; *JE* v. 357, which gives other instances of ceremonial cleanliness). It must be remembered that the priests always walked about the Temple with bare feet. The ground was sacred, and would have been profaned had the ministrants worn their sandals (cf. Ex 3^{5}).

(2) *Roman.*—Ablution of the feet was enjoined as a preliminary to worship of the gods under the Roman and Greek cultus (Jos. Laurentius, *Varia Sacra Gentilium*, in Gronovius, *Thes. Gr. Ant.*, Lyons, 1697–1702, vii. 215).

(3) *Muhammadan.*—The practice of feet-washing before engaging in any religious service is still maintained by Muslims, who have carried over the ceremony from the Mosaic regulations (cf., *e.g.*, W. M. Thomson, *The Land and the Book*, Lond. 1881–86, p. 122).

(4) *Early Christian.*—Churches of the early Christian centuries were provided with an *atrium* or *area* or 'court,' surrounded with porticoes or cloisters, in the middle of which stood a fountain called *cantharus* or *phiala*. In this it was deemed necessary that worshippers should wash their feet and hands before entering the church.

In his panegyric regarding the church erected by Paulinus in Tyre, Eusebius (*HE* x. 4) says: 'On entering within the gates, he has not permitted you to enter immediately, with impure and unwashed feet, within the sanctuary; but, leaving an extensive space between the temple and the vestibule, he has decorated and enclosed it with four inclined porticoes around. . . . Here he has placed the symbols of the sacred purifications, by providing fountains (κρήνας) built opposite the temple, which, by the abundant effusion of their waters, afford the means of cleansing to those that proceed to the inner parts of the sanctuary.'

Further references to this practice are found in Paulinus of Nola, *Ep.* xii. *ad Severum*, where the word *cantharus* is employed. Tertullian (*de Orat.* xi.) inveighs against those who go in to worship, having cleansed the outer person, while they retain a filthy spirit and a polluted soul. Socrates (ii. 38) calls the laver φρέαρ, 'the spring,' when speaking of the bloody conflict between the Catholics and the Macedonian heretics in the church of Acacius at Constantinople, whereby the 'court' with its φρέαρ and its porticoes was overflowed with blood. Chrysostom makes frequent reference to those fountains (hom. lii. *in Matt.*, lxxii. *in Johan.*, iii. *in Ephes.*, *in Psalm.* cxl. etc.); so also Synesius, *Ep.* cxxi. Paulus Silentiarius, in his description of S. Sophia (*Script. hist. Byzant.*, Venice, 1722–33, xiv. 204), calls the fountain φιάλη, the 'basin.' From its being frequently adorned with lions, some modern Greek writers call it the *leontarium* (cf. the fountain in the courtyard of St. Mark's, Venice). Other names are *nymphæum*, ἐμβάτης, and κολυμβεῖον (cf. Bingham, *Orig. Eccles.* II. viii. 6. 3).

(5) *Coptic.*—It would seem from the Canons of Christodulus (11th cent.) that men were required to come barefoot to worship in the ancient Coptic churches in Egypt. A tank was, therefore, placed in the floor, in order to afford facilities for worshippers to cleanse their feet and wipe off the dust of travel before entering on their sacred devotions. The present-day use of shoes in modern Coptic churches has rendered the strict observance of this practice no longer necessary; but the tanks are still employed (as will be pointed out later on) in the services of Maundy Thursday (see A. J. Butler, *Ancient Coptic Churches of Egypt*, i. 23).

The Jewish, Muhammadan, Early Christian, and Coptic ceremonial ablutions of the feet are apparently all of a piece with a ritual of a still earlier era. Flinders Petrie has discovered similar tanks at the entrance to the ancient temple of Serabit el-Khadem in Sinai, parts of which date as far back as Sneferu of the IIIrd Egyptian dynasty (*c.* 4750 B.C.). The tanks, which, however, are probably of a much later date, perhaps of the XVIIIth dynasty, are four in number, and are so situated that it was evidently intended that the worshipper should perform his ablutions over and over again, as he gradually approached the most sacred shrine of all (W. M. Flinders Petrie, *Researches in Sinai*, London, 1906, pp. 105–107).

2. As an act of hospitality.—Providing water for guests, wherewith they might wash their feet, immediately on their arrival at tent or house, was an invariable mark of Oriental courtesy (cf. Gn 18^{4} 19^{2} 24^{32} 43^{24}, Jg 19^{21}). Hospitality was emphasized when the host personally performed the act (cf. 1 S 25^{41}). The practice was general throughout most of the ancient world. At Egyptian banquets, guests had their feet washed by slaves, who sometimes used golden basins (Wilkinson [ed. 1837], ii. 210; Herod. ii. 172). For illustrations of the practice among the Greeks and Romans, cf. Hom. *Il.* x. 577, *Od.* iv. 49, xv. 135; Martial, *Epig.* iii. 50. 3; Petron. *Sat.* xxxi.; Plato, *Symp.* 175, 213. In some reliefs, guests are depicted standing, instead of sitting on couches, while their feet are being washed (*Marbles of the Brit. Mus.* ii. 4). Wine and perfumed essences were sometimes used, instead of water, by rich and extravagant hosts (Plutarch, *Phocion*, 20). This has all along been the practice in the East down to modern times, in monasteries and in private houses (cf. Rufinus, in Rosweyde, *Vitæ Patrum*, 1628, p. 348 f.; Niebuhr, *Reisen*, 1837, i. 54; Shaw, *Travels*, 1861, p. 202; Robinson, *Bib. Res.*, 1856, ii. 229 f.; Jowett, *Researches*[3], 1824, p. 78 f.; Doughty, *Arab. Des.*, 1887–88, ii. 136; Butler, i. 291). In India honour is accorded a guest by the women of the village anointing his feet and wiping them with the hairs of their heads (*Women's Miss. Mag. U.F. Ch. of Scot.*, Feb. 1905). Not to wash one's feet was reckoned a sign of deep mourning (2 S 19^{24}).

3. The NT instances.—These are three in number. (1) The denial of water to a guest was a distinct mark of discourtesy and unfriendliness. Jesus reproached Simon the Pharisee for this neglect, while He commended the loving action of the woman who was a sinner, who washed His feet with her tears, wiped them with the hairs of her head, kissed His feet, and anointed them with the ointment (Lk 7^{36-50}).

(2) The classical example is that recorded in Jn 13^{1-17}. Certain misconceptions arising from ambiguous translation need to be guarded against. The renderings 'supper being ended' (AV) and 'during supper' (RV) are both open to criticism. Guests did not require to have their feet washed either at the end or in the middle of a feast, but Eastern etiquette made it necessary before they sat down to a meal. May we not, however, translate δείπνου γινομένου 'at supper-time,' or 'supper being served,' or 'when supper was about to begin'? If so, all is made plain. The upper room had been secured, the disciples had arrived, the feast was spread. But the servants, whose duty it was to wash the feet of the guests on arrival, were absent. All the utensils—the basin, the water, the towels, etc.—had been left in readiness. Yet none of the disciples showed a willingness to take upon himself this task of humility. Luke (22^{24}) states: 'there was also a strife among them, which of them should be accounted the greatest.' It may well be that this quarrel really took place at the commencement of the feast, and that its true position should be earlier in the evening's events. It would then furnish a reason why Christ taught them this undying lesson of humility. To quell that 'strife,' Jesus Himself rose from the table, laid aside His upper garments, girded Himself with a towel, poured water into a basin, washed the disciples' feet, and wiped them with the towel.

The well-marked distinction between those who, on the one hand, having already 'been in the bath' (ὁ λελουμένος), now require to have merely the dust wiped off their feet (νίψασθαι), and those who, on the other hand, with feet clean, have nevertheless foul bodies, and especially foul hearts, is admirably drawn out by Cox (Almoni Peloni) (*Expos.*, 2nd ser., iv. 146) and Walter Smith (*ib.*, 4th ser., vii. 300), who illustrate the rich inner spiritual teaching underlying the whole of this symbolic act of Christ.

(3) The tradition of Oriental courtesy, involving, as it did, humility and gracious consideration for others, was carried over into the Christian Church, and made one of the qualifications entitling a widow to be received 'into the number.' Such an applicant must have 'washed the saints' feet' (εἰ ἁγίων πόδας

ἔνιψεν, 1 Ti 5^{10})—a phrase which, as Bengel says, may be 'a synecdoche of the part for every kind of humble office,' but which certainly embraces also the literal sense.

4. **The feet-washing by Christ illustrated in art.**—Pictorial representations of this scene in Christ's life are comparatively rare. One on a sarcophagus in the Catacombs is reproduced in A. Jameson's *The Hist. of our Lord as exemplified in Works of Art*, 1864, ii. 12. For other examples, bringing out different features of the incident, cf. an Anglo-Saxon interlined folio Psalter (c. A.D. 1000; Brit. Mus. Cotton Tiber. c. vi.); Waagen, *Treasures of Art in Gt. Britain*, Lond. 1854, i. 144; Giotto, in the Arena Chapel at Padua (Ruskin, *Giotto and his work in Padua*); the *Byzantine Guide to Painting*, in Didron's *Christian Iconography*, 1851, ii. 314. Fra Angelico has a fine treatment of the subject; there is another erroneously ascribed to Perino del Vaga in the Ambrosian Library at Milan; Gaudenzio Ferrari († 1549) has depicted the scene in a fresco at Varallo; in St. Nicholas Cathedral in Newcastle-on-Tyne there is a painting of it by Tintoretto († 1594), while Ford Madox Brown's picture of the feet-washing is in the Tate Gallery, London (reproduced in *Pre-Raphaelites* [Bell's Series of Art Handbooks] and in *The Gospels in Art*, ed. Shaw Sparrow, 1904).

5. **The washing of the feet of catechumens at baptism.**—The feet-washing by our Lord came, in the early Christian centuries, to have a definite religious significance attached to it. Hence arose the ceremony of the *Pedilavium*, or the washing of the feet of the newly-baptized. This rite did not obtain very wide observance throughout the Church, yet traces of it are to be met with in several ancient liturgies.

(1) *The Gothic and Gallican Churches.*—The so-called *Missale Gothicum* gives perhaps the earliest rubric as to the baptismal service, and its sway extended over the major part of the Visigothic Church. The seventh item in this service is the 'washing of feet,' and the rubric is 'Dum pedes ejus lavas, dicis "Ego tibi lavo pedes; sicut Dominus noster Jesus Christus fecit discipulis suis, tu facias hospitibus et peregrinis, ut habeas vitam aeternam."' A different order is observed in two other Gallican sacramentaries, but indications are abundant that in the Gotho-Gallican Church it was the practice for the bishop to wash the feet of the neophytes (cf. Martène, *de Ant. Eccles. Rit.* i. 63, 84; Mabillon, *Mus. Ital.* i.; Marriott, in Smith, *DCA* i. 164; Neale-Forbes, *Anc. Liturgies of the Gallican Church*, 1855, pts. ii., iii. pp. 97, 191, 270; Darwell Stone, *Holy Baptism*, 1899, pp. 169, 288; Ceillier, *Hist. gén. des auteurs sacrés*, 1858–69, iii. 670; Herbst, in *Tübinger Quartalschr.*, 1881, p. 40; Duchesne, *Chr. Worship, its Origin and Evolution*, 1904, p. 326).

(2) *Milan.*—It has been asserted, on the supposed authority of St. Ambrose, that the rite was observed in Milan; but the treatises in which the references to the custom are found (*de Sacram.* iii. 1–7 [ed. Bened., Paris, 1868–90, ii. 362] and *de Myster.* 6) are very doubtfully ascribed to that great Latin Father. In the *de Sacram.* the unknown author speaks of the bishop washing the feet of the baptized ('succinctus summus sacerdos pedes tibi lavit'). The rite, however, was never formally established as part of the Roman service, and the utmost the Roman Church would admit was that the *Pedilavium* might be observed as an incitement to the Christian grace of humility, similar to the custom of washing the feet of strangers, but that no stress must be laid on it as if it taught a mystery comparable with that of baptism or regeneration. To this the Church of Milan replied that, besides teaching humility, the rite did proclaim a deep mystery, and revealed a method of sanctification, for Christ had said, 'If I wash thee not, thou hast no part with me.' No traces of the rite can now be found in the Ambrosian ritual.

(3) *Ireland.*—That the feet-washing of the newly-baptized was observed in Ireland is shown in the *Stowe Missal* (ed. Warren, p. 217), and by Warren, *Liturgy and Ritual of the Celtic Church*, Oxford, 1881, pp. 66, 217 f.

(4) *North Africa.*—An unsuccessful attempt has been made to make Augustine responsible for the prevalence of the ceremony in the N. African Church (J. Vicecomes, *de Antiquis baptismi ritibus*, 1618, III. xx. 912). The belief in the Augustinian authorship, however, of the work in which references to the *Pedilavium* in the N. African Church occur has now been given up. The treatise in question (*de Tempore*, 160) is really a sermon by Cæsarius, archb. of Arles († A.D. 540). Cæsarius quotes the words of a Gallican missal still extant (Martène, i. 64): 'Secundum quod ipsis in baptismo dictum est, Hospitum pedes lavent,' etc. But this, of course, has nothing to do with the Church in N. Africa (see Cæsar. Arl. *Serm.* clxviii. 3, cclvii. 2, in App. to Augustine, t. vi. col. 291 f.). It is undoubtedly true that Augustine twice refers to the practice. In his *Ep. ad Januar.* cxviii., he speaks of the catechumens bathing their whole body and not only their feet before Easter, that they might be free from bodily filth. This, he says, however, was not a ceremonial washing, but in order that the bodies of the catechumens might not be offensive to others. In the other epistle (cxix. 18) he specially refers to the practice of washing the feet of catechumens after baptism 'on the day when the Lord first gave this lesson on humility.' But he adds that, lest their *Pedilavium* (which was usually held towards the end of Lent) should be regarded as essential to the proper observance of baptism, it never received general recognition (cf. Casalius, *de Veter. sacr. Christ. rit.*, 1681, p. 49).

(5) *Spain.*—That there were many attempts to introduce the rite into Spain as part of the Gallo-Gothic service is generally admitted. Apparently, however, there was a growing feeling against its celebration, not only in Spain, but in neighbouring territories. Many Churches, indeed, refused to allow it as part of the baptismal service, and relegated its observance to a day further on in the ecclesiastical calendar—either 'the third day of the octave,' or 'the octave after baptism' itself. Others absolutely declined to admit the observance of it at all. Falling thus into general disfavour, the practice was formally abolished by the Spanish Church.

The 48th canon of the Synod of Elvira (Illiberis), A.D. 306, forbids the celebration of the rite in these words: 'Neque pedes eorum [qui baptizantur] lavandi sunt a sacerdotibus vel clericis' (Mansi, ii. 14). The prohibition passed into the *Corpus Juris Canonici* (c. 104, causa i. qu. 1; see Bingham, XII. iv. 10; F. A. Gonzalez, *Collect. Canon. Eccles. Hispan.*, Madrid, 1808 [reproduced by Brune, *Biblioth. Eccles.* I ii. 1 ff.]; Hardouin, *Concilia*, 1715, i. 225; Hefele, i. 157; Smith, *DCA* i. 104, art. 'Baptism,' §§ 34, 67, *ib.* ii. 1160, art. 'Maundy Thursday').

No traces of the practice can be discerned in the East; and, as it was never followed at Rome, it is plain that the feet-washing of baptized persons was a purely local peculiarity, introduced at an early date into some parts of the Catholic Church, but never universal. At the present day no trace of the rite can be found anywhere in connexion with the sacrament of baptism.

6. **The monastic, imperial, and royal washing of the feet of the poor.**—Though the practice of the *Pedilavium* (or *Lavipedium*, as it is sometimes called) was forbidden as regards the reception into the Church of catechumens, the rite was nevertheless encouraged in connexion with the poor. As the practice is wide-spread through both Western and Eastern sections of Christendom, and has secured a place in certain divisions of Protestantism, it will be most convenient to treat of its growth under the headings of the different countries in which it has been practised, in order that local variations may be observed.

i. *THE WESTERN (ROMAN) CHURCH.*—(1) *Rome.*—The earliest reference to the monastic feet-washing of the poor seems to be in *Ordo Romanus X.* of the 11th cent. (Mabillon, ii. 101: 'Pontifex vero

ingreditur basilicam S. Laurentii, et sine planeta residens in sede, facit Mandatum duodecim subdiaconorum. Interim cantores cantant vesperas ante eum, ut mos est'). The office is in the *Missale Romanum* from the first ed. (1474) onwards, under 'feria quinta in Coena Domini' (see ed. Balthasarius Moreti, Antwerp, 1696, p. 178). Throughout the Middle Ages the practice was commonly observed in nearly every monastery and court; and the feet of subordinate priests, of the poor, or of inferiors, were washed by priests, bishops, nobles, and sometimes by sovereigns. The frequency of the rite varied. In some places it was performed every Lord's Day. But one day in particular in the ecclesiastical calendar was decreed as being eminently suitable, viz. Holy Thursday, the day before Good Friday. The rubric for that day runs: 'conveniunt clerici ad faciendum mandatum'—'mandatum' being the name given to the ceremony from the words of the first antiphon sung during the performance of the service: 'Mandatum novum do vobis ut diligatis invicem' (Jn 13[34]; hence 'Maundy' [see below under '*England*,' p. 818[b]]).

A description of the rite as it was practised until 1870 by the Popes is given in Picart, *Cerem. and Relig. Customs of the World*, 1733, ii. 21; Tuker-Malleson, *Handbook to Christian and Eccles. Rome*, pt. ii. p. 294; M. H. Seymour, *A Pilgrimage to Rome*, 1851, p. 242 f.; Chambers, *Book of Days*, 1863, i. 413; Walsh, *Curiosities of Popular Customs*, 1898, p. 676.

This ceremony of feet-washing, associated with Holy Thursday, is widely practised still in the churches of Italy. In Florence, for example, the archbishop on this day annually washes the feet of twelve poor old men; while in many castles and mansion-houses it is considered to be the correct thing for the nobleman or his private chaplain to see that the *mandatum* is observed. Holy Thursday was also the day on which there took place the restoration of those penitents who had been expelled since Ash Wednesday, their re-admission and reconciliation being gone through with according to the ritual given in the *Pontificale*, and with the chanting of the prescribed 'Penitential Psalms' (*EBr*[9] xviii. 487, art. 'Penance'). A full account of the conditions of restoration is given by H. J. Feasey, *Anc. Eng. Holy Week Ceremonial*, 1897, p. 96 f.

A further ceremony known as the *Lavanda* was maintained until recently in Rome during Holy Week. The Great Hospital of the Holy Trinity was thrown open to the thousands of pilgrims who stream across the Alps from all parts of Europe. A corps of Roman ladies and gentlemen, wearing a distinctive form of dress, superintended the arrangements for the reception of these guests. Only those newly arrived were cared for; and, as the pilgrims were mostly very poor, and had tramped for several hundreds of miles without boots and with their feet enswathed in 20 or 30 yards of linen, they were very grateful to have the blood-stained coils removed, and their sores attended to. They were guided to basement rooms with a low wooden seat round the wall. Here the corps of ministrants, men serving men, and women attending on women, in separate rooms, with warm water and coarse soap washed away the dust and the blood from the pilgrims' feet, and dried them with strong towels. The foul, steamy atmosphere was very trying and disgusting. Relay after relay were thereafter led to a long refectory, where they had set before them abundance of bread and meat, served at deal tables covered with a coarse white tablecloth. They were then guided to St. Peter's, where they participated in the august ceremonies of the Holy Week (Walsh, 809, art. 'Pilgrimage'). Since the Italian Government dismantled the specially fitted rooms the *Lavanda* has ceased (Tuker-Malleson, ii. 251, 294).

(2) *Milan.*—The earliest reference to the practice of feet-washing in the Milanese Church is probably that given by Beroldus in the 12th cent. (see Magistretti, *op. cit. infra*, p. 105). Muratori (*Antiq. Ital. Medii Aevi*, vol. iv. col. 893, 'de Feria quinta') thus explains the rite:

'Interea vero archiepiscopus lavat presbyteris et diaconis et magistro scholarum et primicerio lectorum cum magna reverentia singulis singulos pedes, hisce canentibus hanc antiphonam "Postquam surrexit Dominus a coena." Oratio post mandatum: "Adesto, Domine, officio servitutis nostrae, qui pedes lavare dignatus es tuis discipulis . . . et sicut heic exteriora abluuntur inquinamenta ita omnium nostrorum interiora laventur peccata," etc. His finitis, pro caritate bibit cum eis archiepiscopus, et presbyteris et diaconis et magistro scholarum, et primicerio lectorum duodenos denarios tribuit.'

It may be surmised that this practically was the manner in which the service was carried out in most of the churches of Northern Italy.

(3) *Gaul.*—The earliest reference for Frankish monastic feet-washing is the 24th Canon of the Council of Aachen (Aquisgranense), A.D. 814. It runs thus: 'Statutum ut in Coena Domini pedes fratrum abbas lavet et osculetur, et demum propria manu potum eis porrigat' (can. 24, *Cap. Reg. Fr.* i. 583). The obligation of *kissing* the feet already met with is here most explicitly laid down. The rite was in force in every monastery within the Frankish monarchy, and was observed in substantially the same form, though slight local variations in the ritual are noticeable. The fullest description of these variations is given by Martène (vol. iii. col. 280, and vol. iv. p. 372). The *mandatum* was performed in some convents not by the abbot alone, but by every inmate, and not merely on twelve poor persons, but on as many paupers as there were monks in the cloister. The practice of feet-washing, already so wide-spread in the Roman Church, was still further extended and encouraged by the enthusiasm with which the renowned Bernard of Clairvaux (A.D. 1091–1153) urged its observance. So highly did he regard the rite that he sought to have it placed alongside of Baptism and the Lord's Supper as an eighth sacrament. His words are: 'Nam ut de remissione quotidianorum minime dubitemus, habemus ejus sacramentum pedum ablutionem. . . . Aliquid igitur habet quod necessarium est ad salutem quando sine eo nec ipse Petrus partem haberet in regno Christi et Dei' (*Opera*, i., Serm. 'de Coena Dom,' col. 1950). Though the Papal Court refused to agree to Bernard's plea, such was the greatness of his character and the weight of his example that the ceremony was fixed more securely than ever in the service of the Church. There are references from time to time in history to the royal Maundy of the kings of France. Helgaldus (*Vita Roberti regis*, in Duchesne, *Hist. Francor. Scriptor.* 1636–49, vol. iv.) states that King Robert II. (A.D. 971–1031) daily gathered to his table 300 poor guests, and, after feeding them, was accustomed to lay aside his royal vestments, and, clad in a rough garment of goats' hair, to wash the feet of 160 of them, and to wipe them with the locks of his head. To each he then made a present of two pieces of silver ('duobus solidis remunerans'). Picart (ii. 21) records that in his time the chief physician of the king (Louis XV. [1715–1775]) annually made choice of twelve children whose feet the king washed on Maundy Thursday, and who were afterwards served by his Majesty with dishes of food.

(4) *Spain.*—To Spain belongs the distinction of being the first country in Europe to give a synodal imprimatur to the rite of feet-washing. Canon 3 of the 17th Council of Toledo (A.D. 694), while affirming that the ceremony ought to take place on the anniversary of the day when Christ first performed it, viz. Thursday, the 14th Nisan, goes on to decree: 'Si quisquam sacerdotum hoc nostrum distulerit ad implere decretum, duorum mensium spatiis sese noverit a sanctae communionis perceptione frustratum' (*Conc. Tolet.*, Dec. xvii. c. 3) (see Martène, vol. iii. col. 280). The office is in *Liber Ordinum* (ed. Férotin), col. 192, or Ximenes, *Missale Mixtum* (*Liturgia Mozarabica secundum Regulam beati Isidori*, pars i. in *PL* lxxxv. col. 420, 'ad lavandos pedes'). It is here stated that the rubric as to feet-washing did not exist in the *Missale Toletanum*, but that it had been an ancient custom, kept up on the fifth day of Holy Week, in certain churches of Spain and Gaul, and allowed to

lapse in others. In consequence of this, the Council of Toledo ordered the bishops throughout the whole of Spain and Gaul on this day to follow the example set by Jesus Christ, and to practise the *mandatum*, under the penalty of excommunication for two months for non-performance—whence, it is added, there arose the ceremony of the washing of the feet of poor persons, which everywhere was performed even by Christian princes century after century. At the beginning of the 18th cent. the royal Maundy as observed in Spain was described by Picart (*op. cit.* ii. 23). At the present time, besides being observed in almost every convent and palace in Spain, the rite is still continued by the King, twelve old men and twelve old women having their feet touched with a sponge and a towel by the monarch, who afterwards waits on them at a feast. Hone (*The Every-Day Book*, ii. 405) gives a full account of the ceremony as performed in Seville. In Madrid at the present time all vehicular traffic is forbidden on Holy Thursday. A foolhardy cabman in 1870 nearly lost his life while attempting to defy public opinion on the subject (see Walsh, 677).

(5) *Portugal.*—Feet-washing as a part of the services of Holy Week was not observed by either the ex-king (Manuel) of Portugal or his father. The function as a royal act ceased with the demise of Dom Pedro V. (1861). After the institution of the Republic the ceremony was no longer maintained in the Royal Chapel, but only in a few of the churches of the country. Twelve poor persons had their feet washed amid much pomp and splendour and a great profusion of lights. Those operated upon in the Royal Chapel used each to receive Rs. 6000 (worth to-day 26 shillings). This was done every year.

(6) *Bavaria.*—The ceremony of the feet-washing is still annually observed in Munich on Holy Thursday. It is performed in the 'Hercules-Saal' of the Royal Palace by the King (at present by the Prince Regent) in presence of the members of the Royal Family and the dignitaries of the Church. After the usual religious service, the feet of twelve old men, above 90 years of age, selected from every part of Bavaria, are washed by the sovereign and afterwards kissed by the senior priest of the Royal Chapel. After the ceremony, the King (or Prince Regent) hangs a little blue and white bag containing money over the shoulder of each of these 12 'apostles.' Every 10 years, the rite is also celebrated at Oberammergau, 45 miles S.W. of Munich, in connexion with the famous Passion Play.

(7) *Austria.*—Every Holy Thursday it has for centuries been the custom for the Emperor of Austria to wash the feet of the 12 oldest poor men in Vienna. In one of the halls of the Hofburg, amid a throng of brilliantly uniformed nobles and aristocrats, the scene takes place. First comes a 'feast' given to the old men, who are all dressed in a quaint old German costume, and seated on a row of chairs at a table. The Emperor stands at the end of the table, making the number 13. From a side room emerge 12 nobles, each carrying a tray laden with eatables. The Emperor places the plates in turn before each old man. They remain motionless, not touching a morsel. No sooner are the plates on the table than they are quickly lifted again and carried off by 13 men, who form a bodyguard. Four courses are thus served, and all—dishes and food—are later sent to the houses of the poor guests. Relatives, who have meanwhile been standing behind the chairs, now remove the shoes and hose of the old persons, and spread a roll of linen over their knees. A high church dignitary next reads the Gospel for the day, and at the words 'et coepit lavare pedes discipulorum' the Emperor dips a towel into a basin, and hastily wipes the feet of the old men in turn. The actual washing is very perfunctory, and the whole ceremony is over in a few minutes. Lastly, the Emperor hangs round the neck of each guest a silken bag containing silver pieces, and the old men are sent home in Royal carriages. The late Empress Elizabeth had discontinued the practice of performing a similar rite on old women in Vienna for some years before her assassination. The custom of the *Pedilavium* is still widely practised in the cloisters and churches of Austria (cf. P. H. Ditchfield, *Old English Customs extant at the present Time*, 1896, p. 258).

(8) *England.*—In England, Holy Thursday has received the name of 'Maundy Thursday.' A. Nares (*Glossary*, 1822, *s.v.*), following Spelman and Skinner, derives the word from the Saxon *maund*, 'a basket' (in which the provisions were given away). Cf. Shakespeare, *A Lover's Complaint*, 'A thousand favours from a maund she drew.' *Maund* has also been derived from Fr. *maundier* = 'to beg' ('mendicant' = a beggar); hence 'Maundy Thursday' = 'the poor people's Thursday' (*Gentleman's Magazine*, July, 1779, p. 354). But Skeat (*Concise Etymol. Dict.*[5], 1901, *s.v.*) emphatically maintains that the true derivation is through the Mid. Eng. *maundee* from Old Fr. *mandé*, and that again from Lat. *mandatum*, 'a command' (Jn 13[34]), and that the etymology from *maund* = 'a basket' is 'as false as it is readily believed.' The day is also known as 'Shere Thursday' (also *Sheer, Chare*, from Mid. Eng. *shere* or *sheere* = 'pure,' 'unalloyed,' 'clear'; still seen in the use of 'sheer' to express physical purity).[1] The *Liber Festivalis* (fol. xxxii. b) of 1511 explains the name because 'in old faders dayes the people wolde that day shere theyr hedes, and clypp theyr berdes, . . . and so make them honest agenst Easter-day' (see also Brand, *Popular Antiquities*, 1813, i. 142, and Wordsworth, *Eccles. Biog.* i. 297). Hone (*Every-Day Book*, i. 402) says: 'In the miraculous legend of St. Brendan († A.D. 578) it is related that he sailed with his monks to the island of sheep, "and on *shere-thursdaye*, after souper, he wesshe theyr feet and kyssed them lyke as our lorde dyd to his dyscyples [*Golden Legend*]"' (cf. *Early South-English Legendary* [Early Eng. Text Soc., 1887]).

The Anglo-Saxon Church differed from the national Churches of France, Spain, and other countries in this respect, that it had no distinctive type of liturgy of its own. Roman in origin, owing its existence to Augustine of Canterbury, the A.S. Church was Roman all through. The various missals in use in the A.S. Church were practically the Roman missal with variations, additions, and other modifications which serve to distinguish them from the Continental missals of the same date. Of these A.S. missals, written before the Norman Conquest in 1066, three have survived. Two of them have references to the ceremony of feet-washing: (*a*) *The Missal of Robert of Jumièges* (ed. H. A. Wilson, Henry Bradshaw Soc. xi. [1896] 275), once the property of Robert, prior of the Benedictine monastery of St. Ouen at Rouen, who became abbot of Jumièges in 1037, bishop of London under Edward the Confessor in 1044, and archb. of Canterbury in 1051. The MS is of the end of the 10th cent. and the beginning of the 11th, and was preserved at Rouen. It goes under several titles, *e.g.* 'The Benedictional of Archb. Robert' (*Archæologia*, xxiv. 119); and, wrongly, 'The Book of St. Guthlac' (for which Dibdin is responsible; *Bibliog. Tour*, ed. 1821, i. 165). Here the collect is given without rubrics under the heading 'Benedictio (or Oratio) ad mandatum ipso die.' It runs thus:

[1] On the alleged connexion between 'Chare Thursday' and the German 'Charwoche' or 'Karwoche,' cf. *NQ*, 3rd ser., viii. [1865] 389; and for the derivation of 'Charfreitag,' cf. Graff, *Wörterbuch*, Berlin, 1834–46, iv. 464, and Wackernagel, *Wort zu seinem Lesebuch*, 1838, p. 319.

'Adesto, Domine, officio nostrae servitutis, quia tu pedes lavare dignatus es discipulorum. ne dispiceas opera manuum tuarum quesumus nobis retinenda mandasti. quesumus ut sicut hic exteriora abluuntur inquinamenta. sic a te omnium nostrorum interiora laventur peccata, qui cum Patre,' etc. (cf. the 'Oratio post mandatum,' in the Milanese Church).

(*b*) *The Leofric Missal* (ed. F. E. Warren, 1883), bequeathed to Exeter Cathedral by Leofric, first bishop of that see (1050–1072), is a complex volume with three main divisions: (*a*) a Gregorian sacramentary, written in Lotharingia early in the 10th cent.; (*β*) an A.S. calendar, written in English about A.D. 970; and (*γ*) a number of masses, etc., written in English, from the 10th–11th cent. (see *CQR* xiv. [1882] 278). In it (p. 256) we find the following rubric for 'Feria Quinta in Coena Domini': 'Ante missam vero faciant mandatum cum peregrinis et hospitibus.'

In addition to these surviving pre-Norman service-books, we have scattered historical references to the observance of the rite in the A.S. Church. Wluothus, abbot of St. Albans, ordained a *daily* celebration of the *mandatum*. St. Oswald, archb. of York, washed the feet of 12 poor men and fed them every day. In other religious houses it was the practice to wash the feet of as many poor persons as there were monks in the convent, not only on Maundy Thursday, but on the Saturday before Palm Sunday, which therefore received the name of *Mandatum pauperum* to distinguish it from the regular *Mandati Dies* (T. F. Thiselton-Dyer, *Brit. Pop. Customs*, 1876, p. 139). Aelfric, archb. of Canterbury (A.D. 996–1006), ordered the Saxon priests: 'Imple mandata Domini in coena ipsius,' 'Do on Thursday as our Lord commands you, wash the feet of the poor, feed and clothe them, and with humility wash your feet among yourselves as Christ himself did and commanded us so to do.' Rock (*Church of our Fathers*, iv. 85, 95) describes in full detail the ceremony as observed in the A.S. Church. The rubric for the *mandatum* is given by St. Dunstan as it was carried out in every large church throughout Anglo-Saxondom (*Reg. Conc.* 87). Rupert of Deutz (Tuitensis) († 1135) erroneously ascribed the origin of the rite to the woman who anointed Christ's feet. It was sometimes performed in monasteries for the purpose of comforting the souls of friends and families of deceased persons, and was regularly practised by the A.S. kings (*Biblioth. Patr.* 951, referred to in Fosbrooke, *Encyc. of Ant.*, Lond. 1840, art. 'Maundy,' p. 827). The Clugniac monks merely touched with wetted fingers the feet of these poor men: the Benedictines and Cistercians scrupulously washed the feet of the brethren, the abbot himself not being excused.

Further references to the early English practice will be found in the Cistercian *Consuetudines* (ed. Guignard, p. 110 [1878]); and in H. J. Feasey, *op. cit.* p. 95. References to the observance of the rite in later times are found in several of the missals, service-books, and 'uses.' The *Westminster Missal* (*Missale ad usum Eccles. Westmon.* (ed. J. Wickham Legg, Henry Bradshaw Soc., ii. [1893] 573) has 'ad mandatum pauperum in dia cene, Antiphona "Dominus Ihesus"' (see also note in vol. iii. p. 1510 as to the identity of this anthem with that in Lanfranc's rule). The *York Missal* (*Missale ad usum insignis Eccles. Ebor.* [Surtees Soc.] i. 101, ed. Henderson, 1874), a MS of the 12th cent., gives the rubric first for the *mandatum* for the poor, and then that for the brethren (see Maskell, *Anc. Liturg. of the Ch. of England*, 1882). *The Book of Evesham* (*Officium eccles. Abbatum secundum usum Evesham. Monast.* [ed. H. A. Wilson, Henry Bradshaw Soc., Lond. 1893]), a MS of A.D. 1300, gives a full guide to the abbot as to the performance of the *mandatum* (pp. 83–87). The *Concordia Regularis* places the abbot's Maundy (col. 85, line 10) immediately after the *mixtum* (the 'refreshment'), and makes no mention of a *mandatum pauperum* performed by the convent generally. Lanfranc's *Statuta* agree with the Evesham Book in placing here the *mandatum pauperum*, but differ from it in making no mention of the abbot's Maundy (Reyner, *Apost. Bened. in Anglia*, 1626, App. 87, 220). The *Rites of Durham* (1593 [Surtees Soc. 1903], pp. 66–77) gives us a clear statement of the two services—the *mandatum pauperum* and the *mandatum fratrum*—in that cathedral. Recent excavations in Durham have revealed fire-places for heating the water used in these rites. In some form or other the ceremonies of the Maundy existed here from very early times. The constitutions of priors Absolon, German, and Bertram in the 12th cent. provide for the Maundy at Durham (Hutchinson, *Durham*, 1785–94, ii. 69 n., 70 n.). Similarly of the service at Ripon Cathedral we read (*Memorials of Ripon*, iii. 208, 211, 216, 221 [Surtees Soc.]): 'Et in iij buscellis frumenti empt. tam pro mandato in Coena Domini quam Eukaristia pro communione omnium parochianorum contra festum Paschae 4 s. 9d; precium buscell, 19d.' There are also references to the ceremony in the *Use of Sarum* (*The Sarum Customs as set forth in the Consuetudinary and Customary*, ed. W. H. Frere, 2 vols., 1898 [Henry Bradshaw Soc.]), which from the 13th century began to predominate over the other service-books, e.g. *The Use of Bangor* (A.D. 1268), *The Use of Lincoln*, and *The Use of St. Asaph* (both of the middle of the 15th cent.). See also Swete, *Church Services and Service Books before the Reformation*, 1896. Many of the English cathedrals still retain indications of the identical spots where the feet-washing was performed. Thus 'at York Minster, the Maundy seats are probably those in the N. choir aisle: at Worcester in the E. alley of the cloisters is a bench table anciently used at the Maundy; at Westminster on a stone bench in the E. cloister sat the 12 beggars whose feet the abbot washed, and under the nosing of the bench still remain the copper eyes from which hung the carpet on which he knelt during the performance of the ceremony. At Lichfield, and probably other cathedrals destitute of cloisters, the Maundy ceremony took place in choirs' (Feasey, 107, and *Home Counties Magazine*, Nov. 1909).

The monastic and the royal Maundy were observed in England under the Norman, Plantagenet, and Tudor reigns, as many references in history reveal.

Matthew Paris (A.D. 1200–1259), in his *Chronica Majora*, and Johannes de Fordun († 1385), in his *Chronica gentis Scotorum*, lib. v. c. 29, tell how Matilda, Queen of England (1109), 'nec horrebat pedes lavare morbidorum, ulcera sanie distillantia contrectare manibus, longa postremo protelare oscula et mensam apponere, et in servitio Dei audiendo voluptas unica.'

Henry II.'s reign.—The devotion with which Roger, archb. of York (1154–1181), always went about this ceremony of feet-washing, and his habit of paying the expenses, are specially recorded by old writers (Stubbs, *Actus Pontif. Ebor.*, in Twysden, *Hist. Angl. Script.*, 1652, ii. 1723).

Edward I.'s reign.—The accounts of the wardrobe expenses of Edward I. (1272–1307) record the giving of money on Easter Eve to 13 poor persons whose feet the Queen had washed (Thoms, *Book of the Court*, 1844, p. 311).

Edward II.'s reign.—The king fed 200 poor in honour of Pentecost—'according to ancient custom' (*NQ*, 7th ser., xii. 53).

Edward III.'s reign.—William de Wykeham records of Robert Betun, bishop of Hereford, that such was his piety that he *twice* performed this humble office on Maundy Thursday (*Anglia Sacra*, ii. 310). Langland, in his *Vision concerning Piers the Plowman* (ed. Skeat, ii. 488, ch. xvi. line 140), shows the custom at the end of the same reign:

'Til it bifel on a Fryday a litel bifore Paske
The Thorsday byfore there he made his maundee'
(*ib.* [note] ii. 239).

The close Roll 34 of Edward III. has this entry: 'March 21, at Kenilworth the king washed the feet of 50 poor men'; the previous day there had been an order for slippers, cloth, etc. (*Wardrobe Roll*, 19 Edw. III.). It was in Edward III.'s reign (in 1363) that the practice of granting doles was formally inaugurated (John Brady, *Clavis Calendaria*, i. [1815] 285). The custom of all religious houses and good Catholics of bringing out their broken food in 'maunds' to distribute to the poor gave rise to a veritable fair in many places, *e.g.* Tombland Fair at Norwich, held on the plain before the cathedral close (Brewer, *Dict. of Phrase and Fable*, new ed., 1895, p. 821).

Edward IV.'s reign.—Elizabeth of York, daughter of Edward IV., and future wife of Henry VII., used to bestow 'on xxxvij pore women every woman iijs. jd., for hir maundy upon Shire Thursday' (*Privy Purse Expenses*, i.).

Henry VIII.'s reign.—The king himself on Maundy Thursday washed the feet of as many poor men as he himself was years old, and thereafter distributed to them meat, clothes, and money (A.D. 1509–1547), as Sir Thomas More testified (*Works*, 1319). In the *Household Book* (1770, p. 354 f.) of the Earl of Northumberland, begun in A.D. 1512 (new ed. 1906), there is an inventory of 'Al-maner of things yerly yeven by my lorde of his Maundy, ande my laidis, and his lordshippi's childeren.' At Peterborough Abbey in 1530, Cardinal Wolsey washed and kissed the feet of 59 poor men. After wiping them, he granted to each individual 12 pennies, 3 ells of good canvas to make shirts, a pair of new shoes, a cart of red herrings, and 3 white herrings (Cavendish, *Life of Wolsey*[2], 1827; Holinshed, iii. 914).

In this reign also Catherine of Arragon, while Queen, was wont to observe the day with feet-washing of old women; but, after her divorce, Henry forbade her to do so (1533) except under the title of Princess Dowager.

Mary's reign.—Mary in 1556 gave a dazzling exhibition of her love for pageantry by a celebration of this rite on the grandest scale imaginable. The account of it is given in a letter of Marco Antonio Faitta, Secretary to Cardinal Pole, the Pope's Legate, to a correspondent in Venice of date 3rd April 1556 (*Calendar of State Papers* [Venetian], vi. 428).

Elizabeth's reign.—The royal Maundy was continued when England was no longer Roman. Elizabeth in 1579 very elaborately performed the rite at Greenwich Palace on 39 poor persons (see no. 6183, Add. MSS in Brit. Mus.; Nichols,

Progresses of Queen Elizabeth[2], 1823, i. 325; Hone, *Every-Day Book*, i. 401).

Charles II.'s reign (1660–1685).—'On Thursday last His Majesty washed poor men's feet in the Banqueting House, an act of humility used by his predecessors to as many poor men as he had lived years. The Queen did the same to several women about one of the clock at St. James'' (*Rawdon Papers*, 1819, p. 175). Pepys (*Diary*, ed. Wheatley, 1896, vi. 257) states: 'April 4th, 1667.—My wife had been . . . to the Maundy, it being Maundy Thursday; but the King did not wash the poor people's feet himself, but the Bishop of London did it for him.' It was in this reign that 'Maundy pennies' were first coined, coming fresh from the mint to the recipients.

James II.'s reign.—The last English sovereign to perform the rite in full was James II. (1685–1701). In Colsoni's *Guide de Londres pour les Etrangers*, 1693, p. 33, it is said: 'Le Jeudy Saint, le Roy, selon un fort ancienne coutume, lave les pieds à tout autant de vieillards qu'il a d'années.' But in the 3rd ed. of the same work (p. 43) there is a reference to the fact that the act was no longer performed by royalty in Britain: 'Mais le Roy G. III. (=William III.) a laissé l'intendence de cette cérémonie à son grand Aumonier ou un Evêque du Royaume.'

George II.'s reign (1727–1760).—We possess an elaborate account of how the archb. of York, as Lord High Almoner (on 15th April 1731), performed the annual ceremony of washing the feet of a certain number of poor in the Royal Chapel, Whitehall, in lieu of the monarch (see Hone, *op. cit.* i. 402; *Grub Street Journal*, Friday, 23rd April 1736; and *Old and New London*, iii. 368 f.).

Since 1754 the rite of feet-washing has been wholly obsolete in the Church of England; and in place of the former gifts of provisions and clothing a fixed sum of money is granted. The ceremony in 1814 is described by Hone (*op. cit.* i. 401). In 1818, owing to the advanced age of George III., the number of recipients amounted to 160. During Queen Victoria's reign it was the custom to present Maundy pennies to twice as many aged men and women as the Queen had lived years. King Edward VII. continued the ceremony through the Lord High Almoner, and the practice is kept up similarly by King George V.

The Roman Catholic Church in England still preserves the rite in its entirety, at least in certain places. The Cardinal-Archbishop, clothed in episcopal robes, washes, and wipes with a linen cloth, the feet of 13 choir boys arrayed in cassock and cotta, in the Cathedral at Westminster, each boy afterwards receiving a gift-book (Walsh, *op. cit.* p. 675).

(9) *Scotland.*—The references to the practice are scanty. St. Kentigern is recorded to have washed the feet of *lepers* on the Saturday before Palm Sunday (R. Craig Maclagan, *Scottish Myths*, 1882, p. 139). St. Cuthbert, who may be reckoned as Scottish (A.D. 676), is recorded by St. Bede (*Life of St. Cuthbert*, tr. Stevenson, 1887, p. 33) to have found one day at Ripon a young man sitting in the guest chamber in time of snow. He welcomed him *with the customary forms of kindness.* He bathed his feet for him, wiped them with a towel, placed them in his bosom, himself chafing them with his hands. During his residence in Lindisfarne,

'he would devoutly wash the feet of his brother monks with warm water, and he in his turn was forced at times by them to take off his shoes, and to suffer them to wash his feet; for so entirely had he put off all care as to the body, and so had given himself up to the care of the soul alone, that when once he had put on his long hose, which were made of hide, he used to wear them for several months together. Yea, with the exception of once at Easter, it may be said that he never took them off again for a year until the return of the Pasch, when he was unshod for the ceremony of the washing of the feet which is wont to take place on Maundy Thursday' (*ib.* p. 84; cf. Martène, *De Ant. Eccl. Discip.* c. xxii. pp. 277, 346 [ed. 1706], and *De Ant. Monach. Rit.* iii. 13. 50 f.).

In Turgot's *Life of St. Margaret, Queen of Scotland*, p. 61 (tr. from the Latin by W. Forbes-Leith, 1884), as also in Johannes de Fordun's *Chronica gentis Scotorum*, lib. v. ('The Historians of Scotland') p. 216, it is stated that, 'when the office of matins was finished, she (Margaret), returning to her chamber, along with the king (Malcolm Canmore), washed the feet of six poor persons, and used to give them something wherewith to relieve their poverty.' Her son, Alexander I., the Fierce, copied the example of his mother (*ib.* ch. 28, p. 227). After the Reformation the practice was viewed with great abhorrence (Calderwood, *Hist.* 1678, iii. 703, referring to reign of James VI.).

(10) *Ireland.*—Traces of the monastic celebration of this rite are recorded in the *Missale Vetus Hibernicum* (ed. F. E. Warren, 1879, p. 119, in the service for Maundy Thursday); in the legends of St. Bridgit (Hull, *Early Christian Ireland*, 1905, p. 144; see also *Lives of the Saints from the Book of Lismore* [ed. W. Stokes, 1890]; Carmichael, *Carmina Gadelica*, 1900; cf. also what is said about St. Brendan, above, p. 818[b]).

(11) *Palestine.*—The Latin observance of the *mandatum* takes place in Jerusalem in front of the entrance to the Holy Sepulchre, between the Chapel of the Angel and the Greek church. The rite is described by Mantell, in *PEFSt*, 1882, p. 160.

ii. *THE EASTERN CHURCHES.*—(1) *Greek Orthodox Church.*—The ceremony of the *Lavipedium* was observed with a scrupulosity in the Eastern Church rivalling that of the Western communion. The office—*ἡ ἀκολουθία τοῦ θείου καὶ ἱεροῦ νιπτῆρος*—is in the ordinary ΕΥΧΟΛΟΓΙΟΝ ΤΟ ΜΕΓΑ. Older forms are noted in Goar, ΕΥΧΟΛΟΓΙΟΝ[2] (p. 591). The variants from *Cod. Basiliensis*, noted by Goar, are the oldest extant, viz. *c.* A.D. 795. (See also Dmitrijewski, *Euchologia*, for further details regarding the ancient office.) The Greek office prescribes a full service of chants and prayers and the acting out in every detail of what our Lord said or did—*e.g.*, at the words 'He poureth water into a basin,' the brother both repeats the sentence and imitates the action. Goar (p. 596) refers to Jerome's practice of washing the feet of the multitudes of pilgrims to Bethlehem, and to that of Laurentius of performing the same office for Christian confessors in prison. At the present time the monastic *Lavipedium*, being regarded as an ordinance by the Greek Church, is performed on Maundy Thursday throughout the area over which the Orthodox Church holds sway (cf. Wheeler, *Voyages*, 1689, ii. 414, and Tournefort, *Voyage into the Levant*, 1718, Letter iii. p. 85: 'The more zealous among the bishops wash the feet of 12 Papas; the exhortation they now excuse themselves from').

(α) *Russia.*—The feet of the 'apostles' are washed in all Russian convents, and especially in St. Petersburg and Moscow. Twelve monks arranged in a semicircle are thus treated by the archbishop in the crowded cathedral. 'The archb., performing all and much more than is related of our Saviour in the 13th ch. of John, takes off his robes, girds up his loins with a towel, and proceeds to wash the feet of them all until he comes to the representative of St. Peter, who rises, and says, "Lord, dost thou wash my feet?" and the same interlocution takes place as between our Saviour and that apostle' (Clarke, *Trav. in Russia* [1810], i. 55; see also Leo Allatius, *de dom. et hebd. Græc.*, 1646, p. 21). The Czar of Russia, as the head of the Greek Orthodox Church, continues to this day at St. Petersburg the practice of the Imperial *mandatum*, which was observed in the Court of the Byzantine Emperors at Constantinople. The fullest account of the ancient Byzantine ritual is given by Codinus, *de Officiis Magnæ Ecclesiæ* (ed. Bekker, Bonn, 1839, p. 70, and notes, p. 318; see also *PG* clvii.; and, for the date of Codinus, to whom the *de Officiis* is erroneously attributed [end of 14th and beg. of 15th cent.], see Gibbon, *Decline and Fall* [ed. Bury, 1896–1900], vi. 517, note). The repetition of the Trisagion; the pouring out of the water into the basin by the Czar; the entrance of the 12 poor men, each carrying a burning taper; the washing and kissing of the *right* foot of each by the Emperor; and the giving to each pauper of three pieces of gold, are all slight variants in practice from the ritual as observed elsewhere.

(β) *Turkey.*—The monastic *mandatum* is carried out yearly on Maundy Thursday by the Greek Metropolitan in Constantinople.

(γ) *Palestine.*—On Maundy Thursday the Greek Patriarch washes the feet of 12 of his bishops in a court in front of the Church of the Holy Sepulchre at Jerusalem. In the centre of the courtyard is an oval rostrum, about 4 ft. above the pavement, protected by an iron railing, and enclosing a space about 8 ft. by 12 ft. Inside and around the railing are seats for the bishops, and at the back a gold and white arm-chair cushioned with red satin for the Patriarch. A priest carries in and places before the Patriarch a large golden pitcher in a basin of gold as large as a foot-bath. Then all rise while prayer is offered. The Patriarch removes his grand gown, and stands in a white silk robe with a gold and white girdle. He twists a long Turkish bath-towel round his loins, and pours water into the basin, while the twelve

bishops get their feet out of their gaiters, and pull off their white cotton socks. Each then extends one bare foot to the Patriarch, who sprinkles, dries, and kisses each. The last is 'St. Peter,' who objects, violently gesticulates, and rises. But the Patriarch opens the Bible, reads the words of Christ, shakes his hand at Peter, and the unruly 'apostle' submits. At this moment the bells of the Greek churches all over Jerusalem break into music. The Patriarch descends the steps and, followed by the bishops in double file, marches away. A priest lifts the vase containing the remains of the holy water, dips a large bouquet of roses into it, and therewith sprinkles the upturned faces of the eagerly expectant crowd, who rush forward, wipe up the drops on the floor with their handkerchiefs, and rub their faces with them! (Walsh, 672; a very full account is given by Lieut. Mantell, *PEFSt*, 1882, p. 158).

(2) *Armenian.*—A translation of the office for Maundy Thursday is given by F. C. Conybeare (*Rituale Armenorum*, p. 212):

'For to-day our Lord, the Giver of life, humbled himself for our salvation, to wash the feet of his disciples. And the Maker of heaven and earth in the guise of a servant, in all humility fulfilling the tremendous economy, went down on the knees of dust-created beings, and with the raiment wherewith he was girt, wiped away and cleansed the feet of his apostles, giving them power and authority to trample on asps and vipers and all the hosts of the enemy . . . so then it was the compassionate God Christ, Son of God, who to-day stooped to the feet of the disciples, washing away the scandal from them' (the text is from A, an uncial codex in San Lazaro Monast., Venice, not dated, but probably of 9th cent., not later than 10th).

In the Armenian rite a vessel of water is placed in the choir, and chrism is poured crosswise upon it at the benediction. When the bishop has washed the feet of clergy and people, he also anoints them. Then, resuming his cope, which was laid aside for the feet-washing, he is lifted up on high, and dispenses the people from fasting during Easter-tide (Butler, *op. cit.* ii. 350).

The Armenian services of Holy Week, in the form they have assumed in the later Middle Ages, and retain till to-day, have been published by Amy Apcar of Calcutta (*Melodies of five Offices in Holy Week, according to the Holy Apostolic Church of Armenia*, Leipzig, 1902). In this work the hymns sung by the congregation are printed with modern musical notation (note by Conybeare, *loc. cit.* p. 219).

(3) *Coptic.*—The Text of the Office is in Tuki, Εὐχολόγιον, pp. π–τκς' (170–226). The present Coptic usage is described by A. J. Butler, ii. 350:

'On Maundy Thursday, called "The Thursday of the Covenant," tierce, sext, and nones are duly recited; after which, if there be no consecration of the holy oils to come first, a procession is formed to a small tank in the nave, where the Patriarch blesses the water with ceremonies similar to those ordained for Epiphany, but the gospels and hymns on this occasion dwell upon the subject of the Lord's washing the feet of the disciples. At the end of the prayers, the Patriarch gives his benison to the assembled priests and people, sprinkling them with water from the tank; then also he washes the feet of sundry persons, both clerical and lay, and dries them with a towel. On this day, immediately after the washing of feet, the door of the "haikal" is opened for the celebration of the Holy Communion, after which it is closed again; but in this Mass the kiss of peace and the commemoration of the dead are omitted.' In the 'Systatical Letter,' or decree of the Synod read by the Deacon from the *ambon* or pulpit, setting forth the duties of the Patriarch, it is expressly mentioned that he is to perform the office of feet-washing on Maundy Thursday (*ib.* ii. 145). Hence Butler thinks the ἐπιχερι mentioned in the ancient rubric must mean a towel, doubtless of fine embroidery, gorgeously woven with silver and gold. It was laid on the patriarch's shoulder at his ordination, with special reference to his performance of this ceremony, to which the Coptic Church attached great importance (see Butler, ii. 122, for the special *fanon* used instead of a mitre on this occasion).

The tank used for feet-washing is a conspicuous feature in Egyptian churches. It is usually a shallow rectangular basin about two feet long and one foot broad, sunk in the floor, and edged generally with costly marbles. The ordinary position for it is in the westward part of the nave, but in many desert churches it lies rather more eastward (*ib.* i. 23).

7. Feet-washing in Protestant Churches.—(1) *Lutheran.*—At the Reformation, Luther denounced the practice of feet-washing with characteristic plainness of speech. To him the ceremony was one

'in which the superior washes the feet of his inferior, who, the ceremony over, will have to act all the more humbly towards him, while Christ had made it an emblem of true humility and abnegation, and raised thereby the position of those whose feet he washed. "We have nothing to do," said he, "with feet-washing *with water*; otherwise it is not only the feet of the twelve, but those of everybody we should wash. People would be much more benefited if a general bath were at once ordered, and the whole body washed. If you wish to wash your neighbour's feet, see that your heart is really humble, and help every one in becoming better"' (*Sämtliche Schriften*, pt. xiii. [Magdeburg, 1743], col. 680).

Similarly the Lutheran J. A. Bengel (1687–1751) followed his master in condemnation of the rite:

'In our day, popes and princes imitate the feet-washing to the letter; but a greater subject for admiration would be, for instance, a pope, in unaffected humility, washing the feet of one king, than the feet of twelve paupers' (*Gnomon* [Eng. tr.[3], 1835–36, ii. 420]; Bengel recommends the study of Ittigius, *de Pedilavio*, 1703).

In 1718 the Lutheran Upper Consistory of Dresden condemned twelve Lutheran citizens of Weida to public penance for having permitted Duke Moritz Wilhelm to wash their feet (*PRE*[3] vi. 325, art. 'Fusswaschung').

(2) *Moravian.*—Amongst the other ancient practices revived by the Moravian Brethren was that of the *Pedilavium*, though they did not strictly enforce it. It used to be performed not only by leaders towards their followers, but also by the Brethren among themselves, while they sang a hymn in which the significance of the rite (called 'the lesser Baptism') was explained. In 1818, at a Synod of the Church held at Herrnhut, the practice was abolished.

(3) *Mennonites.*—Menno Simons (1492–1559) in his work, *The Fundamental Book of the True Christian Faith* (1539), laid stress on feet-washing in addition to Baptism and the Lord's Supper, as a necessary ordinance (Mosheim, *Eccl. Hist.*[2], 1868, iii. 545; Kurtz, *Church History*, ii. 405 [Eng. tr.[2] 1891]). His followers were styled *Podoniptæ*. The *Confession of the United Brethren or Mennonites* (1660) acknowledges the standing obligation of the rite as instituted by Christ. The Mennonite Church in Holland was in 1554 split into 'Flemings' and 'Waterlanders,' the former holding the binding necessity of feet-washing, the latter being not so strict. The Waterlanders now call themselves *Doopsgezinden*. The literal practice of feet-washing led to a split in the American Mennonite Church in 1811 (McClintock-Strong, *Cyclop.* vi. 95, art. 'Mennonites').

(4) *Tunkers* or *Dunkards.*—However divided on other points, the members of this sect are all agreed on the binding obligation to observe the feet-washing. The ceremony takes place twice a year in each congregation before the celebration of the love-feast. But as to the correct mode of feet-washing, *i.e.* whether the person who washes the feet must also wipe them, or whether another person should perform the latter operation, there have been grave disputes. The 'single mode' is insisted on by the oldest churches as being more in line with Christ's example, but the Annual Meeting has prescribed the 'double mode' as the recognized rubric for the general brotherhood (Schaff-Herzog, iv. 24, art. 'Dunkers').

(5) *Winebrennerians*, or *The Church of God.*—The 11th article of their creed says: This Church 'believes that the ordinance of Feet-washing, that is, the literal washing of the saints' feet according to the words and example of Christ, is obligatory upon all Christians, and ought to be observed by all the Church of God.' In every congregation Feet-washing, with Baptism and the Lord's Supper, are 'positive ordinances of perpetual standing in the Church' (see H. K. Carroll, *The Religious Forces of the United States*, i. 102; Schaff-Herzog, iii. 91; *PRE*[3] ii. 389; McClintock-Strong, ii. 338, art. 'Church of God').

(6) The *Amana Society*, or *Community of true Inspiration.*—One of their most sacred religious services is the *Liebesmahl*, or love-feast, celebrated now but once in two years. At this Lord's Supper, the ceremony of feet-washing is

observed by the higher spiritual orders. The participants are arranged into three classes: 'The number of those who were to serve had to be determined in proportion to the great membership. Thus there were appointed for the foot-washing at the first Love-feast 13 brothers and 12 sisters. . . . For the second Love-feast likewise 13 brothers and 14 sisters from the first class' (see AMANA SOCIETY, vol. i. p. 365 f.).

[(7) *Seventh-Day Adventists.*—Among this American denomination the rite of feet-washing 'is observed at the quarterly meetings, the men and women meeting separately for this purpose, previous to the celebration of the Lord's Supper, during which they meet together' (Special Census Report [1906] on *Religious Bodies*, ii. 23, Washington, 1910).

(8) *Baptist sub-sects.*—The Freewill Baptists believe in this rite (*ib.* 124), as do some General (Arminian) Baptists (*ib.* 128), and it is also performed by the Two-Seed-in-the-Spirit Predestinarian Baptists (*ib.* 156) and by more than half of the Primitive Baptists (*ib.* 139). Both the Separate Baptists and the Duck River Baptists (Baptist Church of Christ) hold that there are three ordinances—baptism, the Lord's Supper, and feet-washing (*ib.* pp. 132, 136); while the Coloured Primitive Baptists observe the rite 'not "as a Jewish tradition or custom, but as a matter of faith in Christ, and in obedience to the example given by Him"; the sacramental service is not considered complete until this rite is performed' (*ib.* 151).

(9) *River Brethren.*—Both the Brethren in Christ and the United Zion's Children—two sub-sects of this denomination, which is ultimately derived from the Mennonites—observe this rite, although the United Zion's Children differ from the Brethren in Christ in that among the former the same person both washes and dries the feet, while among the Brethren in Christ one person washes and another dries (*ib.* 173).

(10) *Miscellaneous American sects.*—The *Christian Union* occasionally, though rarely, practise feet-washing (*ib.* 189), but it is a distinctive tenet of the Church of the Living God, or *Christian Workers for Friendship* (to be distinguished from its offshoot, the Apostolic Church, which is also called Church of the Living God) (*ib.* 208), and in the Negro *Church of God and Saints of Christ* the ceremony is performed by an elder (*ib.* 202). One of the reasons for the formation of the *New Congregational Methodist Church* in 1881 was its wish to grant to those who desired it permission to observe the rite of feet-washing in connexion with the administration of the Lord's Supper (*ib.* 477). It is also permitted by the *United Brethren in Christ*, who hold that the practice of feet-washing should be left to the judgment of each individual (*ib.* 646).—LOUIS H. GRAY.]

It remains only to be observed that some of the purest and noblest souls in modern times who have lived for the welfare of their fellow-men have felt so attracted by this rite that they have desired to have it recognized as a sacrament (see A. B. Bruce, *Life of William Denny*, 1888, p. 256).

8. Feet-washing in connexion with marriage.—In many countries, both in ancient times and at the present day, bathing of the whole body, and, more particularly, washing of the feet, have been reckoned essential features to the proper celebration of marriage. Thus Roman brides had their feet washed by the *pronubæ* when they approached their husbands on the wedding day (Festus Pompeius, ii. 6; Macrob. *Sat.* iii.; cf. Matt. Bronerius, *de Pop. Veter. ac Recent. Adorationibus*, 1713, col. 978). In many parts of rural England and Scotland, relics of this custom still survive. On the evening before the marriage takes place, a few of the bridegroom's friends assemble at his house, when a large tub nearly filled with water is brought forward. The bridegroom is stripped of shoes and stockings, and his feet and legs are plunged into the water. While one friend with a besom rubs his feet vigorously, another besmears them with shoe-blacking or soot, while a third practises some other vagary (cf. the practice of the ancient Greeks in daubing their naked bodies with clay and dirt in the Dionysiac Mysteries; see G. L. Gomme, *Folklore Relics of Early Village Life*, 1883, p. 219; Gregor, *Folklore of N.E. Scotland*, 1881, p. 89; and de Gubernatis, *Storia comparata degli usi nuziali in Italia*, Milan, 1869, p. 121). In 1903 a case occurred where the bridegroom was a son of the Provost of Huntly. His feet were thus washed by his friends, and the bride would have been similarly treated had not her health prevented it (W. C. Hazlitt, *National Faiths and Popular Customs*, 1905, ii. 454). It was sometimes customary for the ring to be dropped into the water during the washing of the feet of the bride; whoever recovered it first was deemed to have the best chance of being the next to be married (John Grant, *The Penny Wedding*, Edin. 1836).

In the warm Orient, the practice enters largely into the ceremony of the marriage day. In some parts of Java the bride, as a sign of her subjection, kneels and washes the feet of the bridegroom as he enters the house; and in other places, for the same reason, he treads on a raw egg, and she wipes his foot. Among the peoples inhabiting the Teng'gar Mountains in Java, the bride washes the feet of the bridegroom, while she is still actually bending in lowly reverence before the priest during the marriage service (E. J. Wood, *The Wedding Day in all Ages and Countries*, i. [1869] 156, 157). As it is by means of the hands and feet that *bhūts* (evil spirits) enter the body, it is held necessary in India for feet-washing to form part of the marriage ceremony (Crooke, *Popular Relig. and Folklore of N. India*, 1896, i. 241). Thus, at a Santal wedding, women come forth and wash the feet of the guests who arrive with the bridegroom at the village (E. T. Dalton, *Descr. Ethnol. of Bengal*, Calcutta, 1872, p. 216). So among the Muási, at certain times in the marriage service, the two fathers wash the feet of the bride and the bridegroom respectively (*ib.* 234). If this washing were omitted, some foreign and presumably dangerous spirit might slip into the company, just as (according to the favourite example of the result of neglect of this rule) Āditi's failure to do this allowed Indra to form the Maruts out of her embryo (Crooke, i. 242). Amongst the Marāthās in India, feet-washing is repeatedly observed in connexion with a marriage. When the bridegroom's father sends a relative along with the priest to the girl's father to propose the match, they are welcomed, and water is given them to wash their hands and feet. On the marriage day a married woman of the bride's house pours a dish full of water mixed with lime and turmeric on the bridegroom's feet as he enters the bride's home. As soon as the pair are husband and wife, the bride's father and mother sit on two low stools in front of the bridegroom face to face, and the father washes the feet of the husband, while the mother pours water on them (*Ethnographic Append. to the Census of India*, 1901, p. 96 f.). Similarly among the Deshasth Brāhmans, on the marriage eve the women of the girl's house, especially the girl's mother, wash the boy's mother's feet, and mark her brow with vermilion. On the morning of the marriage the bridegroom dismounts at the door of the bride, and his feet are washed by one of the women servants of the house. On the marriage-feast day all wash their hands and

feet at a place prepared for the purpose. The maid who stands at the door with an earthen pot full of water empties it at the feet of the pair, who enter the house, followed by friends and relatives. At a later stage the girl again washes her hands and feet, and takes her seat as before, to the right of her husband. At night the girl washes her husband's feet in warm water, with the aid of her elder sister or some friend, and on his feet paints vermilion and turmeric shoes (*ib.* pp. 115, 117, 119). A feature of the Bengal Brāhman wedding ceremony is the *Jāmātā-baran*, or the bridegroom's welcome by the bride's father. The latter offers his prospective son-in-law water for washing his feet (*pādya-arghya*), which the bridegroom touches in token of acceptance (*ib.* p. 190). On the Malabar coast early in the 19th cent. the bridegroom's feet were washed with milk by a young relative who also put a silver ring upon his toe (Wood, *op. cit.* ii. 141). The Indian theory of the duty of the wife to wash her husband's feet has even been exalted into a means of salvation for the woman. Just as it is taught in the *Tantras* that 'the water of a *guru's* (religious teacher's) feet purifies from all sin' (Morrison, *New Ideas in India*, 1907), so in the *Skānda Purāṇa* (iv. 35) it is laid down: 'Let a wife who wishes to perform sacred oblations wash the feet of her lord, and drink the water; for a husband is to a wife greater than Śiva or Viṣṇu. The husband is her god, her priest, her religion; wherefore, abandoning everything else, she ought chiefly to worship her husband.' Even amongst the ancient Poles, the bride on being led to church was made to walk three times round a fire, then to sit down and wash her husband's feet (Wood, i. 219). In Rabb. literature it is made abundantly plain that feet-washing was a service which a wife was expected to render to her husband (Jerus. *Ket.* v. 30*a*). According to R. Huna, it was one of the personal attentions to which a Jewish husband was entitled, however many maids the wife may have had. A similar duty is laid down in the Bab. Talmud (*Ket.* 61*a*), where washing the husband's feet is part of a wife's necessary service to her lord (cf. Maimonides, '*Yad*,' *Ishut*, xxi. 3; *JE* v. 357).

LITERATURE.—For the Jewish ceremonial washing of the feet: Surenhusius, *Mischna*, Amsterdam, 1698–1703, vol. v., and Schürer, *GJV*[3], Leipzig, 1898–1901 [*HJP*, Eng. tr. of 2nd ed., Edin. 1885–90], Index, *s.v.* 'Waschungen.' The most important references for the baptismal feet-washing are the *Missale Gothicum*; Martène, *de Ant. Eccles. Ritibus*, Antwerp, 1738; Smith's *DCA*, art. 'Baptism'; Bingham, *Orig. Eccles.*, London, 1708–22; Hefele, *Hist. of the Christian Councils* (Eng. tr.[2]), Edinburgh, 1872.

For the monastic and imperial feet-washing the chief authorities are: i. for the Western (Roman) Church—(1) Rome: Mabillon and Germain, *Mus. Ital.*, Paris, 1687–89; the *Missale Romanum*, Venice, 1491, 1574; Tuker-Malleson, *Handbook to Christian and Ecclesiastical Rome*, London, 1897, 1900. —(2) Milan: Magistretti, *Beroldus sive Eccl. Ambros. Mediolan. Kalendarium et ordines*, Milan, 1894; and Muratori, *Antiq. Ital. Medii Aevi*, Milan, 1738–42.—(3) Gaul: the fullest account of the variations in the rite is given by Martène, *op. cit.*; cf. also Amalarius, *de Officio Ecclesiastico*, in *PL* cv. 1011. —(4) Spain: the Office is in *Liber ordinum* (ed. Férotin), or Ximenes' *Missale Mixtum*, in *PL* lxxxv. Much information is given in Isidorus Hispalensis (ed. Arevalo), *S. Isidori Hispal. Episc. Opera Omnia*, 7 vols., Rome, 1797–1803, reprinted in *PL* lxxxi.–lxxxiv., esp. lxxxiii. 764. The Spanish royal Maundy is described in Picart, *Cérémonies et coutumes relig. de tous les peuples du monde*, Amsterdam, 1723–37 (Eng. tr., London, 1733–37), and more recently in Hone, *Every-Day Book*, London, 1838–41.—(5) Portugal: the facts relating to the rite have been furnished by the Rev. R. M. Lithgow, of Lisbon, from information obtained by him from the Court Chaplain under the last régime.—(6) Bavaria: information obtained from Dr. von Laubmann, Chief Librarian of the Royal Library at Munich.—(7) Austria: the scene in the Royal Palace is as witnessed by the writer in 1896.—(8) England: for pre-Norman use, see pseudo-Alcuin, *de Divinis Officiis*, in *PL* ci. 1203; *Missal of Robert of Jumièges* (ed. H. A. Wilson [Henry Bradshaw Soc.], 1896); the *Leofric Missal* (ed. F. E. Warren, 1883); and, for later use, see the other Missals, Services, and Uses of the Early English Church. D. Rock, *Church of our Fathers*, London, 1905, gives a highly coloured picture of the rite as celebrated in the Anglo-Saxon Church.—(9) Scotland: J. de Fordun, *Chronica Gentis Scotorum*, Edinburgh, 1871–72, lib. v.—(10) Ireland: *Missale Vetus Hibernicum* (ed. F. E. Warren, Oxford, 1879).—(11) Palestine: Mantell, in *PEFSt*, 1882.

ii. For the rite as observed in the Eastern Churches, the principal authorities are: (1) for the Greek Orthodox Church, Goar, ΕΥΧΟΛΟΓΙΟΝ[2], Venice, 1730; and Dmitrijewski, *Euchologia*, 1901. The fullest account of the ancient Byzantine service is given in Codinus, *de Officiis Magnæ Ecclesiæ* (ed. Bekker), Bonn, 1839, and in *PG* clvii. The Greek Palestinian ceremony is very amply described by Mantell, *loc. cit.*—(2) The Armenian service is given most fully in Conybeare, *Rituale Armen.*, Oxford, 1905.—(3) For the Coptic rite, see Tuki, Εὐχολόγιον; and for the present Coptic use, with an account of the feet-washing tanks, see esp. A. J. Butler, *Ancient Coptic Churches of Egypt*, Oxford, 1884, and F. E. Brightman, *Liturgies, Eastern and Western*, Oxford, 1896—a perfect mine of information (only vol. i., 'Eastern Liturgies,' is yet published).

For feet-washing in Protestant Churches the articles in *PRE*[3], McClintock-Strong's *Cyclop.*, 1881, Schaff-Herzog's *Encycl. of Religious Knowledge* (art. 'Dunkers'), and H. K. Carroll, *The Religious Forces of the United States*, N.Y., 1893, are of importance.

For feet-washing in connexion with Indian marriage customs, the most numerous references are perhaps to be found in the *Ethnographic Appendix to the Census of India*, 1901, and E. Thurston, *Castes and Tribes of S. India*, Madras, 1909.

G. A. FRANK KNIGHT.

FEINN CYCLE.—1. This is the third of the three great Celtic mythological cycles. (For the other two, see artt. CELTS, V. 1, and CÚCHULAINN CYCLE.) The story of Fionn and the Feinn is indelibly graven in Gaelic thought. Poems, tales, romances, proverbs, and history all abound in allusions to the wonderful, if somewhat mythical, heroes. Their names, qualities, and exploits have been as familiar to the generations of Gaelic-speaking Celts as the Biblical names and narratives to the Jews. Fionn, son of Cumhail, son of Trenmor, was the ideal chief of the band, full of mighty deeds and highest virtues. With him were associated Oisin, his son (Macpherson's Ossian), renowned in later ages as the so-called Homer of the Celtic people; Oscar, son of Oisin, handsome and kind-hearted, one of the bravest of the Feinn; Diarmad O'Duibhne, with the *ball-seirc*, or beauty-spot, which induced every woman who beheld him to fall in love with him; Caoilte MacRonan, nephew of Fionn, the swiftest of them all; Fergus Finnebheoil, Oisin's brother, on account of his wisdom and eloquence famous as poet, diplomatist, and ambassador; Goll MacMorna, blind of an eye, once the enemy of Fionn, whose father he killed, but afterwards his follower; and Conan Maol, the comic character and Thersites of the party.

These were the outstanding figures among the braves who were banded together for the defence of their country, and who warred and hunted on a scale that has raised them to such pre-eminence that they are sometimes confused with the gods of the Gaelic Olympus.

2. The theatre of their operations was Leinster and Munster in Ireland. That country is therefore regarded by most authorities as the original home of the Feinn or Ossianic romance, which in time extended itself to the west of Scotland, the Hebrides, and the Isle of Man. The greater number of the incidents are represented as having taken place during the reign of Cormac MacArt, MacConn of the hundred battles, and that of his son Cairbre of the Liffey. The former reigned from A.D. 227 to 268 (*Annals of the Four Masters*), but it was during the reign of the latter in the year A.D. 284 that the battle of Gabhra was fought, which for ever put an end to the Feinn power. That power, said to have been due mainly to the knowledge of Fionn, the swiftness of Caoilte, and the combativeness of Conan, had become so unbearable to the Irish, through the strictness with which the Feinn guarded their privileges, that the High-King determined at length to try conclusions with it, and succeeded, though Oscar and he perished in fighting each other. Fionn was not present in this battle, either having met his death shortly before,

or, as later and less authentic accounts would have us believe, being absent in Rome.

There are no contemporary records now extant of the Feinn any more than there are of Abraham, of Moses, or of Homer. The earliest references to Fionn (originally Finn) occur in a poem of Gilla Caemhain [d. 1072], and in the *Annals* of Tighernach [d. 1088]. Both of these allude to the manner and date of the hero's death, and may have derived their information from a poem of Cinaeth O'Hartagain, who died in A.D. 985. Translated, this poet's remark runs thus: 'By the Fiann of Luagne was the death of Finn at Ath Brea upon the Boyne' (*Book of Leinster*, fol. 31*b*). As it was the bards and professional story-tellers who in those early days handed down by oral tradition the memory of great men and great incidents, it is possible that no tales of the heroes were written, except perhaps in ogham, till the 7th century. The oldest existing MSS in which we have mention of Fionn and the Feinn are the *Leabhar na h'Uidhre*, compiled from earlier documents towards the close of the 11th cent., and the *Book of Leinster*, similarly produced about fifty years later. In the former there is a poem ascribed to Fionn; a remark of his wife's containing Gaelic words so old that they required to be glossed in the 11th cent.; an account of the cause of the battle in which his father was killed; and the story of Mongan, an Ulster king of the 7th cent., who was regarded as Fionn come to life again. In the later MS the references are more numerous. Besides poems ascribed to the Feinn chief, to Oisin, Caoilte, and others, there are passages from the lost *Dinnsenchus*, a topographical tract regarding Fionn; an account of a battle in which he fought; his genealogy as well as that of his famous officer Diarmad O'Duibhne; besides a list of no fewer than 187 historical tales. There are other Finns besides Fionn mentioned in the *Book of Leinster*, but, if the list of tales was really drawn up in the 7th or beginning of the 8th cent., as Hyde thinks d'Arbois de Jubainville has proved (*Literary History of Ireland*, p. 382), then it is evident that Fionn and his heroes were subjects of historical story-telling as early as that period. And in what Whitley Stokes believes to be the oldest portion of the Glossary of Cormac, king-bishop of Cashel (A.D. 837–903), there are two further very definite allusions to the wonderful head of the Feinn, who is therein also mentioned by name.

These earliest written hints and impressions represent Fionn as a real historical personage. The story of his life which they unfold is certainly meagre, but it is perfectly intelligible.

3. Of the various versions of his birth, that in the *Leabhar na h'Uidhre* is probably the most substantial. According to it, Tadg, chief Druid of King Conn, had a beautiful daughter, called Muirne. Cumhail, son of Trenmor, at that time leader of the Feinn, wished to wed this young lady. On coming to know this, her father stoutly opposed their alliance, because he knew by his Druidical foresight that, if Cumhail married her, he himself would lose his ancestral seat at Almhain (present Allen) in Leinster. But the great military champion was not thus to be balked. So he took the beautiful Muirne and married her against her father's wishes. The result was that the old man appealed to the king for redress, and the royal forces were despatched to deal with the arbitrary hero. This army encountered Cumhail and his Feinn at Cnucha, where a deadly struggle took place, during which Cumhail was slain by Aedh MacMorna, who, because he lost an eye in this battle, was ever afterwards known as *Goll*, that is, 'the blind,' MacMorna. Hearing of the fate of her husband, Muirne fled to his sister and gave birth to a son, who was at first called Demni, but subsequently Finn, on account, it is said, of his white head (*Finn* means 'fair'; *Fiann*, gen. *Feinne*, 'band' or 'troop,' pl. *Fianna*, 'troops' or 'soldiers' [*Transactions of the Gaelic Soc. of Inverness*, 1886 and 1898]). When the boy grew up he demanded *éric* from his grandfather Tadg for the death of his father, and thus came into possession of Almhain, as his grandparent had anticipated. He also made peace with Goll, whom he enlisted as one of his band of warriors, and who usually figures in the stories as a kind of Ajax. Like his father Cumhail, Fionn got the command of the Feinn and acquired a great reputation as a poet. In fact, in the oldest setting of the so-called Ossianic tales, the poets of the Feinn were Fergus and he, not Oisin. It was only in later and comparatively recent times, as E. Windisch has shown that the latter ousted his father from the pre-eminence in this respect (*RCel* v. 70 ff.). Fionn learned the art of poetry from Finn Eges or Finnéces, a bard who lived on the banks of the Boyne (for poem attributed to him at this period, see Kuno Meyer's *Four Songs of Summer and Winter*, London, 1903). In a tract written upon a fragment of the 9th cent. Psalter of Cashel, and preserved in a 15th cent. MS in the Bodleian Library, Oxford, it is related how he was sent to this old man to complete his education. There had been a prophecy that, if one of the name of Finn ate a salmon caught in Fiacc's pool, he would no longer be ignorant of anything he might wish to know. The aged poet for seven years fished for the coveted prize, but in vain, till his youthful pupil arrived. When the salmon was landed, the delighted Finnéces sent the lad to cook it, at the same time giving him injunctions that he was on no account to taste it. As destiny would have it, Fionn, while turning the fish, burnt his thumb and thrust it into his mouth to ease the pain. Thereupon he was immediately endowed with the gift of knowledge, and every time he sucked his thumb he saw into the future. On reporting this wonderful experience to his master, the poet asked him his name. 'Demni,' said the youth. 'No,' replied the disappointed Finnéces, 'your name is Finn, and it is you who were destined to eat of the salmon of knowledge. You are the real Finn.' (For translation of tract, see vol. iv. of the *Transactions of the Ossianic Society*.)

The story of *Ordag mhor an colais* ('the great thumb of knowledge') is differently told in a vellum MS in Trinity College, Dublin. There the injured member is represented as having been not burnt, but squeezed by a door which opened in a hill to admit a strange woman, apparently of the fairy order, whom Fionn's curiosity led him to follow.

4. Though mythic elements have entered largely into these stories, there are three other outstanding events of the hero's career which have an air of historicity. They are mentioned and taken for granted as real from earliest times. These were Fionn's marriage with Gráinne, King Cormac's daughter; her elopement with Diarmad O'Duibhne; and Fionn's subsequent revenge on this offending officer. It is in the 'Pursuit of Diarmad and Gráinne,' one of the most persistent of the Feinn sagas, that the fullest account of these events is given (translated by O'Grady, *Trans. Oss. Soc.* vol. iii.). At a feast in honour of Fionn's betrothal at Tara, Gráinne drugged the wine, sending the guests asleep till she got an opportunity to put Diarmad, of whom she made an exception, under *geasa* (bonds which no hero could refuse to redeem) to flee with her. After the banquet, Diarmad, who was most unwilling to injure his chief, consulted his comrades as to what he should do. He even asked Fionn, concealing the lady's name, and they all answered that no hero could break a *geas* put upon him by a woman. That night the pair eloped, and, when the jilted chief discovered their flight, his wrath knew no bounds. A pursuit was organized, and they were followed all over Ireland. Though at length overtaken, they were permitted to return in peace; for the Feinn would not allow Fionn to punish their popular comrade. But Fionn never really forgave Diarmad, and soon after, with sinister intention, he invited him to the chase of the wild boar on Ben Gulban. This animal Diarmad killed without getting any hurt. Then it was that Fionn ordered him to measure the animal's length against the bristles. While Diarmad was doing this, one of the bristles pierced his heel—his only vulnerable part—and he died of the poisoned wound. Even then his chief might have saved him by administering the antidote of which

he held the secret, but he did not. And so to all posterity there is this smirch—the only one recorded—on the character of the truest, wisest, and kindest of the Feinn, one who, if he could help it, would never let any one be in poverty or trouble. He himself met his death, it is said, at the hands of a fisherman, probably a Fian of Luagne who sought the notoriety to be obtained from slaying so famous a warrior. The event was followed by the fateful battle of Gabhra, and from this time the curtain falls on the career of the Feinn as an organized body, who henceforth enter the region of myth and fable.

5. For one reason or another these heroes presented ideals of existence that appealed most profoundly to the Gaelic-speaking race, and continued to appeal, in spite of all change, down to the period when science began definitely to cast men's thoughts into other moulds. After the Feinn *débâcle*, the story of their exploits passed into oral tradition. The common people, the bards, the professional story-tellers, the annalists, and the churchmen were all more or less familiar with the details, and interpreted, rehearsed, and amplified them, each class in its own way—with the result that in course of time a great variety of versions arose and entirely new elements entered into the history.

First of all, the Feinn began to be associated with the supernatural and with personages and incidents belonging to the popular Celtic mythology. As 'distance lends enchantment to the view,' so the old heroes were gradually elevated and idealized in the popular imagination. Qualities that originally belonged to the gods were ascribed to them, and they figured in scenes and incidents similar to those rehearsed in the earlier mythical stories. In fact, the opponents of Fionn and his men were no longer the men of Connaught and Ulster, but underworld deities, and the strife between the two seems like a variant of that between the Tuatha Dé Danann and the Fomorians. Sometimes the former are represented as helping Fionn against his powerful foes. That this deifying process had been carried far before the 11th cent. is evident from the story of the Mongan who, the annalists averred, was a reincarnation of the famous head of the Feinn, and son of the god Manannan MacLir.

By and by the Norsemen began to appear and settle in Ireland, and then another new element entered into the warp and woof of the Feinn saga. Fionn in this later rôle is neither the tribal Leinster chief fighting against the northern clans, nor is he the demigod in conflict with underground deities; he is the leader of all Gaeldom warring against oversea invaders from Lochlann. According to some of the sagas, he was born in Lochlann, and, after his voyage to the giant's land, was put ashore in Ireland, which he then trod for the first time. According to others, he walked from Lochlann to Erinn on a road.

The introduction of the Norse element, like that of the supernatural, has rendered the story of the Feinn exceedingly complicated and contradictory, so that the authorities find it hard to reconcile the various versions with the known facts of history. Commenting on the matter from this point of view, Henderson (*CeR* i. 366) says:

'The only reasonable explanation is that Lochlann meant Norse settlements in Ireland. That fits all versions, and makes this story consistent. Stripped of the mythology, which is partly Scandinavian in character, the framework thus far may be historical. The military leader, Cumal, sets up for himself in Scotland. The Norsemen and the Irishmen tempt him to Ireland, where he is slain on the Irish king's territory. His son is born in Ireland, on one or other of the territories in question. When he grows up he seeks vengeance, like an Icelander in a saga, takes a ship, escapes abroad, comes back to the place where his father set up for himself, tells tales to account for his riches, and then follows his father's example, and fights chiefly in Ireland with Norsemen and Irishmen, turn about, till his power is broken and his men are scattered. Then he becomes mythical, and is like Arthur and other worthies who have disappeared from the world.'

But such a view is surely inconsistent with the earliest impressions of Fionn's origin and history as given in the *Leabhar na h'Uidhre* and elsewhere. J. Rhys's conjecture (*Origin and Growth*, p. 355) seems to offer a more likely solution when he says that *Lochlann*, like the Welsh *Llychlyn*, before it came to mean the home of the Norsemen, denoted a mysterious country in the lochs and seas. The Lochlanners might, in that case, be originally the submarine mythical people or underworld deities corresponding to the Fomorians, with whom the Feinn were represented as fighting when they began to be confused with the personages of the mythological cycle.

A third remarkable element in the saga is the religious or ecclesiastic. It is introduced in the following peculiar way. After the overthrow of the Feinn, Oisin and Caoilte agreed to separate. The former went, as tradition says, to Tir-nan-Og, 'the land of the ever young'; the latter passed over Magh Breagh, southwards, and ultimately joined St. Patrick. When 150 years had passed away, Oisin returned on a white steed to seek his old friend and comrade Caoilte. From this horse he was cautioned not to dismount lest he should lose his immortal youth. On the way he found everything changed. Among other things, instead of the old temples of the gods he observed Christian churches, and the Feinn, alas! were now but a memory. One day, unfortunately, as he attempted to assist some men in raising a stone, he slipped from his magic steed, and as soon as he touched the earth he became a blind and withered old man. His horse rushed off to Tir-nan-Og, after which Oisin was brought to St. Patrick and Caoilte, with whom he lived the rest of his days. Both were the saint's constant companions in his missionary journeys through Ireland, and were useful in giving him the history, legends, and topography of all the places they visited, and many besides. These were written down by Brogan, St. Patrick's scribe, for the benefit of posterity. Oisin loved to recount the exploits of the Feinn and to debate with the apostle of Ireland regarding the new religion, against which he was prejudiced in favour of the ethics of his younger days. Between the saint and the aged pagan there occurred various heated and passionate disagreements, the settlement of which is the subject of 'Oschin's Prayer' (*Scottish Review*, viii. [1886] 350 ff.). The conversations are given in the form of dialogues between the two, the one representing paganism, the other Christianity. Doubtless they were the work of monks or ecclesiastical scribes in the 12th cent. or earlier, and they appear in their pristine form in 'The Colloquy of the Ancients,' which is the longest of all the Feinn saga. It is preserved in MSS dating from the 15th cent., but chiefly in the *Book of Lismore* (tr. in O'Grady's *Silva Gadelica*; Whitley Stokes, *Irische Texte*, vol. iv.).

A fourth element that entered largely into the popular tales and ballads of later times was the wizardry of the Middle Ages. In these, giants, dwarfs, enchanted castles, dragons, palfreys, witches, and magicians figure. When they were introduced it is impossible to say, though James Macpherson fancied they were imposed on the Feinn saga in the 15th century. There is evidence that, even earlier than this, Fionn and his heroes were represented as giants; and Scottish authors such as Hector Boece, Bishop Leslie, and Gavin Douglas refer to them as such.

As the centuries passed, the volume of detail increased, each age contributing its own impressions and its own imaginative setting. In Scotland we have evidence of this extraordinary activity in the Book of the Dean of Lismore in the 16th cent.;

the poems of Stone, Macpherson, Smith, Clark, Maccallum, and others in the 18th and 19th cents.; and much more impressively in the various collections such as J. F. Campbell's *Popular Tales of the West Highlands*, 1862, and his *Leabharna Feinne*, 1872. The latter alone contains 54,000 lines of Gaelic verse, and Cameron's *Reliquiæ Celticæ* 10,000. (For a detailed account of all the other Scottish collections see Stern's résumé in *Transactions of the Gaelic Society of Inverness*, vol. xxii. pp. 288–292.) In Ireland the same development has been continuously taking place, as witnessed by such representative works as Stokes' *Irische Texte*; O'Grady's *Silva Gadelica*; *Proc. Ossianic Society*; Hyde's *Sgéaluidhe Gaedhealach*; and Larminie's and Curtin's *Tales*. So numerous indeed are the Ossianic poems and stories that O'Curry estimated that, if printed at length in the same form as the text of O'Donovan's edition of *The Four Masters*, they would fill as many as 3000 pages of such volumes. That computation he made before the publication of Campbell's *Leabhar na Feinne*. Apart from the tales, it is believed that the poetry alone in Scotland and Ireland combined amounts to a number somewhere between 80,000 and 100,000 lines, all belonging to the Feinn cycle. And this brings us now to the crux of the whole subject.

6. *Who were the Feinn?* It is a question of the deepest interest, in view of the varied opinions that have been expressed. (*a*) Irish authors have always regarded them as an actual martial caste or militia maintained during several reigns by the kings of Erin for national defence. Tighernach, Keating, the Four Masters, Eugene O'Curry, and Douglas Hyde are representative of the common native opinion which has prevailed from early times. Keating, writing about A.D. 1630, gives the traditional account as he gleaned it from ancient books now lost; and Eugene O'Curry, holding the same view last century, wrote the following as his own conviction in the matter:

'I may take occasion to assure you that it is quite a mistake to suppose Finn Mac Cumhail to have been a merely imaginary or mythical character. Much that has been narrated of his exploits is, no doubt, apocryphal enough, but Finn himself is an undoubtedly historical personage; and that he existed about the time at which his appearance is recorded in the Annals is as certain as that Julius Cæsar lived and ruled at the time stated on the authority of the Roman historians' (O'Curry, *MS Materials*, Lect. xiv. p. 303).

The band of Feinn were divided into three, or more usually seven, regiments, and had officers over every nine, fifty, and a hundred men. Before a soldier could be admitted he was subjected to rigid tests, some of them of the most extraordinary kind. His relatives had to renounce their right of *éric* in his case. He himself required to promise—(1) never to receive a portion with a wife, but to choose her for her good manners and virtues; (2) never to offer violence to any woman; (3) never to refuse charity to the weak and poor in the matter of anything he might possess; (4) never to flee before nine champions. Along with these obligations went loyalty to the High-King and sworn fidelity to the commander-in-chief. More difficult accomplishments were the following:—He must have the gift of poetry, and be versed in the twelve books of the Muse according to the rules of the chief bard. With only a hazel stick of a forearm's length and a shield, and standing in a hole up to his belt in the earth, he had to defend himself against a simultaneous attack by nine warriors armed with spears, and separated from him only by a distance of nine field rigs. If he were hurt, he was not received as one of the Feinn. Not a man was taken until, with his hair braided and a start of only a tree's breadth, he was pursued by a war-troop through Ireland's woods, and succeeded in eluding them without letting his hair fall. If even the weapon in his hand trembled, or a withered twig broke under him, he could not be accepted. The candidate had further to leap over a branch the height of his forehead, and bend under another no higher than his knee; to hold a spear horizontally with steady arm; and, without slackening his pace while running, to pull out a thorn from his foot with his nail (15th cent. Vellum in British Museum, marked 'Egerton, 1782').

The duties and privileges of the Feinn were equally well defined. In time of peace they acted as the custodians of the public security, maintaining the right of the ruler and guarding the coasts against strangers. In winter from Samhain to Beltane (1st Nov. to 1st May) they were quartered on the people and under shelter. In summer they lived in the open air, hunting and fishing, and eating but one meal a day, always in the evening. Their bed consisted of branches, moss, and rushes. Even to this day the peasantry of Ireland profess to find the traces of their fires (*fualachtan na bh'Fiann*) in deep layers of the ground (Stokes, *Book of Lismore*, p. xl; O'Grady, *Silva Gadelica*, pp. 92, 258; O'Mahony's tr. of Keating's *History*, pp. 345–350; and O'Curry, *Manners and Customs of the Ancient Irish*, pp. 2, 379).

(*b*) W. F. Skene and D. MacRitchie believed that the Feinn were a race distinct from the Gaels and probably allied to, or even identical with, the Picts. The latter writer went further, suggesting the possibility of their being the fairies of Gaelic tradition. But the theory that the Picts were a non-Celtic race is not now accepted. Duncan Campbell put forward the view that Fionn figures as a Gaelic *gueledig*, the leader, like Arthur, of a militia modelled upon the Roman legions (*Trans. of the Gaelic Society of Inverness*, 1887). Zimmer thinks that he was really the Viking robber, Caittil Find, who commanded the Gall Gaidhil or apostate Irish in the 9th century. The names Oisin and Oscar are, in his opinion, the old Norse Asvin and Asgeirr. Kuno Meyer is equally convinced that all the names of the Feinn are Gaelic, not Norse, and, like Windisch, he holds that in all probability there were real historical characters round whose memory the tales and myths and folk-lore grew.

(*c*) While in the main the Irish and German scholars thus favour the view that primeval heroes corresponding to Fionn and the Feinn actually existed, some recent British authorities, prominent among whom have been Alfred Nutt, John Rhys, and Alexander MacBain, are disposed to uphold the opposite opinion, and look upon the Feinn as simply the gods of Celtic mythology humanized, or regarded as men. This way of construing the history may be gathered from the words of MacBain:

'Finn is evidently the incarnation of the chief deity of the Gaels—the Jupiter spoken of by Cæsar and the Dagda of Irish myth. His qualities are king-like and majestic, not sun-like as those of Cuchulain. He is surrounded by a band of heroes that make a terrestrial Olympus, composed of counterparts to the chief deities. There is the fiery Oscar (*ud-scar*, utter-cutter ?), a sort of war-god; Ossian, the poet and warrior corresponding to Hercules Ogmius; Diarmat, of the shining face, a reflexion of the sun-god; Caelte, the swift runner; and so on. . . . The stories are racial and general, and can be tied down to neither time nor place' (*Celtic Mythology*, p. 108 f.).

But this theory does not readily square with the facts. In a review of history we find that it is not so much the gods who are degraded as it is the heroes who are exalted. Popular idols, who in their own day were human enough, in course of time were clad with divinity. By a curious working of the human imagination they are credited with attributes and deeds beyond the range of man's experience. It is thus no doubt that, the tales of Fionn and the Feinn becoming mixed up in popular fancy with the earlier mythical accounts of gods and heroes, the incidents of the latter were transferred to the former, until the heroes were at length deified. Indeed, Windisch, impressed with the likelihood of some such transference, looked on the mythic incidents of the Feinn cycle as derived from the previous Cúchulainn cycle, which in turn drew upon Christian legend.

7. If then it be asked, as it is natural to ask, how far the Feinn are historical and how far mythological, the answer may very well be given in the words of D. Hyde, who hits off exactly the

impression one gets who is familiar with the varied literature of the Feinn, the actual mythology of to-day, and its history in the past.

'While believing in the real objective existence of the Fenians as a body of Janissaries who actually lived, ruled, and hunted in King Cormac's time, I think it equally certain that hundreds of stories, traits, and legends, far older and more primitive than any to which they themselves could have given rise, have clustered about them. There is probably as large a bulk of primitive mythology to be found in the Finn legend as in that of the Red Branch itself. The story of the Fenians was a kind of nucleus to which a vast amount of the flotsam and jetsam of a far older period attached itself, and has thus been preserved' (Notes to Lady Gregory's *Gods and Fighting Men*, p. 467).

8. It was the publication of the so-called translations of Ossian by James Macpherson in 1760–1763 that principally led to the re-discovery of the great body of Feinn saga in modern times, as well as to the recrudescence of its production. The controversy that raged round the name of the Badenoch bard for upwards of a hundred years has now happily been laid to rest, Celtic scholarship having no difficulty in establishing the fact that, though Macpherson drew upon the names and legends of the past, the poems were his own (Maclean, *Lit. of the Highlands*, Glasgow, 1904, pp. 69–90). His initiative and genius, however, have been most powerful in inaugurating the new era of research into this whole cycle of poetry and romance—a research which has gone on unabated and indeed with growing ardour to this day, and which is proving so fertile in the publication of texts, translations, and all kinds of literature bearing on the subject. The following are among the representative books and papers which may be consulted with advantage:—

LITERATURE.—Windisch-Stokes, *Irische Texte*, Leipzig, 1880–1900; S. H. O'Grady, *Silva Gadelica*, Lond. 1892; G. Keating, *History of Ireland*, tr. O'Mahony, N.Y. 1857; *Annals of the Four Masters*, tr. O'Donovan, Lond. 1848–1851; E. O'Curry, *MS Materials*, Dublin, 1861, and *Manners and Customs of the Ancient Irish*, 1873; James Macpherson, *Ossian*, Lond. 1760–1763, 1773; Whitley Stokes, *Dinnsenchus*, do. 1892, and *Book of Lismore*, Oxf. 1890; *Waifs and Strays of Celtic Tradition*, Argyleshire Series, Lond. 1889–91, esp. vols. ii., iii., and iv., containing Alfred Nutt's Essay and J. G. Campbell's *The Fians*, 1891; A. Nutt, *Ossian and the Ossianic Literature*, Lond. 1899; W. F. Skene, *Celtic Scotland*, vol. i., Edinb. 1876; J. F. Campbell, *Popular Tales of the West Highlands*, do. 1862, and *Leabhar na Feinne*, Lond. 1872; T. Maclauchlan, *The Book of the Dean of Lismore*, do. 1862; A. Cameron, *Reliquiæ Celticæ*, Inverness, 1892–1894; *Proc. of Ossian. Soc.*; *Transac. of Gaelic Soc. of Inverness*; O'Beirne Crowe, *Kilkenny Arch. Journal*; *RCel*, 1870–1906; *ZDA*; H. d'Arbois de Jubainville, *La Littérature ancienne de l'Irlande et l'Ossian de Macpherson*, Paris, 1883; Ludwig C. Stern, *Die Ossian. Heldenlieder*, tr. by J. L. Robertson, 1898; J. Rhys, *Lectures on the Origin and Growth of Religion as illustrated by Celtic Heathendom* (Hibbert Lectures, 1886), Lond. 1888; C. Brooke, *Reliques of Irish Poetry*, 1789 and 1816; Douglas Hyde, *Sgéaluidhe Gaedhealach*, Lond. n.d., and his *Literary History of Ireland*, do. 1899; M. Maclean, *Literature of the Celts*, do. 1902; Lady Gregory, *Gods and Fighting Men*, 1904; C. Squire, *Mythology of the British Islands*, Lond. 1905; P. W. Joyce, *Old Celtic Romances*², do. 1894; J. Curtin, *Hero Tales of Ireland*, do. 1894; Kuno Meyer, *Anecdota Oxoniensia*, do. 1905; J. Rhys, *Celtic Folklore*, Oxf. 1901, vol. ii.; papers in *Archæol. Review*, 1888–1889; *Celtic Magazine*, 1876–1888; *Celtic Review*, 1905–1912.

MAGNUS MACLEAN.

FEMALE PRINCIPLE.—That there is a relationship between femininity and religion is indicated by at least three classes of facts: the existence of female deities, the use of phallic symbols in worship and ritual, and the supposed kinship between love in religion and love of mates. How close the relationship is between these two aspects of life is a matter of much contention. The opinions range from that which regards the connexion as accidental and superficial to the notion that religion is essentially a refinement of and abstraction from a feeling for mates. Between these extremes are many shades of judgment which acknowledge that the two facts have more or less vital connexion. The determination of the nature and extent of this relation is a question of psychological and sociological analysis. This can be made only in connexion with an observation of some of the facts on which the conceptions are based.

1. Female deities.—Amongst many primitive peoples, and at the present time in a large number of less developed cults, goddesses occupy important places in the pantheon. In early Babylonia there were as many goddesses as gods; for each male deity, we may assume, had his female companion. There was at least one goddess as patron of each of the cities, sharing with her lord the devotion of its worshippers. Instances are Nana, patroness of Uruk; 'good lady' Bau, 'mother' of Lagash; Ninlil of Nippur, 'mistress of the lower world' and 'lady of the great mountain'; and the 'glorious and supreme' Ninni of Gishgalla, 'mistress of the world.' These city-goddesses had a precarious and extremely varied history. Some of them sank out of sight as consorts of the gods whose majesty and power they could not equal. They became 'mere shadowy reflections of the gods, with but little independent power, and in some cases none at all' (Jastrow, *Rel. of Bab. and Assyria*, New York, 1898, p. 104). This twilight extinction is especially true in early Babylonia, in Syria, and among other nations that entered upon a heroic programme of world-conquest. As if to complete the logic of this type of subjection, goddesses were changed into male deities. 'In various parts of the Semitic field we find deities originally female changing their sex and becoming gods' (W. R. Smith, *Rel. Sem.*², London, 1894, p. 52). Some of them were eclipsed by other more powerful and more beloved goddesses, as villages were fused into cities and cities into States. A marked instance of this subjection and absorption is found in the rise of Ishtar of later Babylonia and Assyria to the position of 'mother of the gods' (and of goddesses as well), who sometimes absorbs the titles and qualities of all. In the event of an eclipse by a male consort or by a greater representative of her own sex, a goddess did not always forfeit her existence, but was deflected into the performance of some special function of lesser importance.

An instance in point is Gula, 'princely mistress' of Minid. This solar deity, Minid, 'mighty one of the gods,' remains even to the days of Nebuchadnezzar I. as 'king of heaven and earth,' and in Assyria also is honoured with every conceivable epithet as god of war and the chase; whilst Gula is only occasionally invoked by the rulers, and assumes a more modest rôle of healer of diseases. In like manner, Juno came to be 'called by the Romans Juno Lucina, the special goddess of child-birth' (C. M. Galey, *Classic Myths*, Boston, 1904, p. 204). No less a goddess than the beloved Ishtar (Astarte of Phœnicia) often suffers the humiliation, when brought into competition with other deities, of serving as the patroness of sensuality.

Another line of differentiation from the multitude of early municipal goddesses was the borrowing or transportation of favourite deities by other peoples, or the amalgamation of their qualities and names with those of native goddesses of the places into which they came. Nana of Erech was one of the first of the important goddesses of the early Sumerian period of Babylonia. Her name appears in many forms and places during early Semitic times: Nanæa, Nani, Nanya, Anitis, Anæa, Tanath, etc., through a considerable list. In like manner she won a place in the worship of other countries.

'The worship of the Sumerian goddess Nana of Erech is traced with probability in Elam, with certainty in Syria, Bactrian-India, Asia Minor, and Greece. She had affiliations with Ishtar in Assyria-Babylonia, with Anahita in Persia, Armenia, and possibly in Bactria, with Ashtoreth (Astarte) in Phœnicia, and went to the making of Artemis or Diana, of Aphrodite or Venus, and of Athena in the Greek world' (G. W. Gilmore, in *New Schaff-Herzog*, viii. 80).

It is possible, however, that the goddesses of Greece and Rome are instances of the law of fusion rather than cases of borrowing. It would seem that Greece and Rome worshipped goddesses of love in very early times, and that their importance was enhanced through association with foreign female deities.

'The native Greek deity of love would appear to have been Dione, goddess of the moist and productive soil. . . ; Venus was a deity of extreme antiquity among the Romans, but not of great importance until she had acquired certain attributes of the Eastern Aphrodite' (Gayley, 424).

2. Personality of female deities.—Goddesses have exercised in some place or time essentially every conceivable office as deity, with mental qualities to fit the part. There is, however, a law of differentiation of function as between male and female deities that sets the gods apart to exercise the sterner qualities as ruler, law-giver, judge, protector, or conqueror, whilst goddesses symbolize the gentler and more heartful qualities of Nature and mind. Illustrations are the Greek Aurora, goddess of the dawn, analogue of Uṣas in India; Venus, the spirit of love and beauty; and the Scandinavian Freya, goddess of the atmosphere and clouds, of marriage, and patroness of the tender affection of married lovers, and of parental devotion. This specialization of function often produces a compassionate goddess whose prevailing presence can breathe solace in times of grief and pain, and inspire hope to the weary and heavy-hearted. Such is the holy Mary in Christian worship, with her almost exact counterpart among the Iroquois, Aztecs, and Mayas of America and elsewhere (D. G. Brinton, *The Religious Sentiment*, New York, 1876, p. 68).

While it is not true, as Max Müller has pointed out (*Contributions to the Science of Mythology*, London, 1897, ii. 818), that female deities are purely abstract principles, it is safe to say that they are generally more spiritual than the gods. The name Minerva, goddess of wisdom and contemplation, is from the Latin, Greek, and Sanskrit words for 'mind.' Among the Tzentals of Mexico was and still is worshipped the highest of goddesses, Alaghom Naom, lit. 'she who brings forth mind.' 'To her was due the mental and immaterial part of Nature; hence another of her names was Iztal Ix, the mother of wisdom' (Brinton, *Myths of the New World*, Philadelphia, 1896, p. 179). This pervasive quality of goddesses causes them to burrow in the deeps of things, whence they fix destinies, like the Fates—Clotho, Lachesis, and Atropos, daughters of Night. Of the members of the Egyptian triad—Osiris, Horus, and Isis—the last was *par excellence* the skilled magician. Whilst many goddesses are resplendent with light, others are, since they dwell in the deeps of things, of a sinister character. Others combine both qualities, as is true of Durgā, Kālī, Chaṇḍika, and Chāmuṇḍā of India. These are so tender as to receive the innocent prayers of little children, and at the same time are gloomy and foreboding. Female deities have often, thanks to their spiritual qualities, acted as intermediaries between gods and men. The Hindu Śiva is manifested through his wife 'the Great Goddess,' Mahādevī. She 'with a thousand names and a thousand forms' is able to suffuse the day by her elusive presence (A. Barth, *Religions of India*, London, 1891, p. 199). It should not be supposed that, because goddesses are the more spiritual and pervasive presences, they lack integrity and stability. On the contrary, they often represent permanency in the midst of change. The soil in which such a feeling springs is found in a myth rather wide-spread, that the original creative principle is female, and another belief that woman alone is endowed with immortality.

In making generalizations upon the gentler spiritual traits of goddesses, one should not forget the warlike proclivities of the Assyrian Ishtar, and that Minerva was also 'Pallas' Athene who hurled the thunderbolt (see also ASHTART, BENGAL, §§ 13, 31, DURGĀ, EARTH, etc.).

3. Supreme goddesses. — Female deities have often enjoyed the highest place among the gods. This depends upon the nature of the social organization and the respect in which women are held. Clan-life in which the mother is the head of the group is likely to lift the 'mother-goddess' into a supreme position, provided the nation has risen above the stage of magic. The early Semites, who before their dispersion had a polyandrous social organization, are an illustration. G. A. Barton says of them:

'We only see more clearly [than did even W. Robertson Smith in his *Religion of the Semites*] that the chief deity of the clan was at this primitive time a goddess, and that, in so far as a male deity played any considerable part, he was her son and reflex' (*Semitic Origins*, London, 1902, p. 106).

During Bab. history her later equivalent, Ishtar, rose to a position 'independent of association with any male deity' and 'becomes the vehicle for the expression of the highest religious and ethical thought attained by the Babylonians' (Jastrow, 82 f.). Many other illustrations are found among the natives of America (E. J. Payne, *History of the New World called America*, Oxford, 1892–99, i. 462, ii. 480).

'The goddess Tonantzin, Our Dear Mother, was the most widely loved of Nahuatl divinities, and it is because her mantle fell upon Our Lady Guadalupe that the latter now can boast of the most popular shrine in Mexico' (Brinton, *Myths*, 179).

It seems inevitable that, as the quieter agricultural pursuits in naturally protected valleys favourable to the worship of goddesses have fallen into the background, through the fusion of clans and cities into warring nations in which chivalry and virility are at a premium, male deities have risen supreme, while those of the 'weaker sex' have been degraded to lesser functions, attached as consorts, superseded and forgotten, or, to save themselves, have changed their sex to fit the new demands (cf. Barton, esp. pp. 178–180).

India is unique in having the opposite history—of higher appreciation of goddesses, along with its later development. It illustrates, however, the same principle in a negative way. The Vedas were written before and during the period when the Aryans were conquering the aborigines of India and were engaged in feuds among their own tribes. Under such conditions there are no goddesses, although the literature is richly polytheistic. Since the nation has settled down into a relatively peaceful life of agricultural pursuits, the worship of female deities has risen to a place of supreme importance: Durgā, spirit of Nature and spring; Kālī, soul of infinity and eternity; Sarasvatī, supreme wisdom; and Śakti, mother of all phenomena. This is not so strange in a land in which from the earliest times 'one's daughter is the highest object of tenderness' (Manu, iv. 185) and 'the mother is a thousand times more than the father' (ii. 145), and in which there is the present phenomenon, as in the province of Malabar, of women holding a higher social and political position than men (Sister Nivedita, *The Web of Indian Life*, New York, 1904, p. 76 f.). Hence it is that the Hindu worshipper utters daily the prayer:

'O Mother Divine, Thou art beyond the reach of our praises; Thou pervadest every particle of the universe; all knowledge proceeds from Thee, O Infinite Source of Wisdom! Thou dwellest in every female form, and all women are Thy living representatives upon earth' (Svami Abhedananda, *India and Her People*, New York, 1906, p. 285).

4. Goddesses of 'love.'—The term 'love,' as shown in the sequel, is a fusion of three or four separate meanings. In this connexion it is used in the sense of love of mates and the tender passion. There can be no doubt that certain goddesses of various countries have been patrons of courtship, marriage, and fecundity, and even of sensuality. The function of Venus in Rome, Aphrodite in Greece, Freya in Scandinavia, Ishtar in Babylonia, and Tlazolteotl of the Aztecs witnesses to this fact. The behaviour of many of these consorts of the gods is evidence that their wifely attributes were much in the thought of the wor-

shippers. The gods have often conducted themselves toward their mates in a wanton and sensuous manner. In addition to the worship of the deities of love, both male and female, much use has also been made of other deities supposed to be wholly free from those characteristics in the expression of the tender passion. Ideal marriages to the Mother of God have been not uncommon in Christendom; and the spiritual unions of Christian mystics with Christ have been of a passionate sort.

In the main, according to W. James, the religion of St. Teresa 'seems to have been that of an endless amatory flirtation—if one may say so without irreverence—between the devotee and the deity' (*Varieties of Religious Experience*, New York, 1902, p. 347 f.).

The full extent of feminine attraction in religion cannot well be appreciated, however, without an adequate recognition of the retention of the appropriate symbols of sex even after the goddesses themselves have lapsed into oblivion. The persistence of the symbols betrays how the concept and the accompanying impulse have been fixed, then abstracted, and finally blended into the central stream of religion. Among the commonest of these symbols and the least mistakable in their meaning are representations of the reproductive organs. Phallic symbols have been and still are used in the under currents of Shintoism in Japan (E. Buckley, *Phallicism in Japan*, Chicago, 1898; Griffis, *The Religions of Japan*, New York, 1895, pp. 29, 49, 88, 380–384). The *liṅga* in India is 'the symbol under which Śiva is universally worshipped' (J. Dowson, *Dict. of Hindu Mythology*, London, 1891, p. 177). The 'sign of the Mother Goddess,' the symbol of the female organ of reproduction, ramified through many of the Semitic cults (Whatham, *AJRPE*, July 1911, pp. 252–309). Many writers regard certain pillars and posts of houses and altars, and signs carved upon these, as representations of the threshold of life of the mother-goddess (H. C. Trumbull, *The Threshold Covenant*, 1896, pp. 109–164, 228 ff.; Barton, 101 f., 251, 253, etc.). There are wide-spread serpent-stories and serpent-symbolism in religion (H. Ellis, *Psychology of Sex Auto-erotism*, Philadelphia, 1905, p. 206) which are supposed to typify sex (G. W. Cox, *Myth. of Aryan Nations*, London, 1887, p. 353). Fruit-bearing trees, their boughs, their fruit, bunches of grapes, and even the gum that exudes from the tree, have been regarded as sacred symbols of the reproductive principle of Nature, and perhaps contain a strain of sexual obsession (W. R. Smith, 133). Fire-sticks and fire-drills used in worship in many parts of the world have the same significance (GB^3, London, 1911, pt. i. vol. ii. pp. 207–226, 250). In Egypt and amongst the Saivites in India, the lotus is a symbol of the reproductive act (Creuzer, *Symbolik und Mythologie*, Leipzig, 1836–43, I. i. 412). The Buddhists of the north countries still repeat, without suspecting the origin of the phrase, 'Om! The jewel in the lotus. Amen' (Brinton, *The Religious Sentiment*, 214). In the West, too, these symbols persist, even when, as also among the Buddhists, they contradict the central doctrine of the religion in which they appear. In later Rome, women carried phallic emblems in the processions, and this was prohibited by the Council of Mans in 1247, and again by the Council of Tours in 1396 (*Encyc. Am.*, art. 'Phallus'; on the survivals of old cults, Barton, 233–268). See, further, PHALLICISM.

When one combines the presence of these phallic rites and emblems with the fact that religion has amongst most peoples to a greater or less extent broken out in Bacchanalian, Dionysian, Saturnalian, and other orgiastic revels, and often has with seeming purpose ended in the most unbridled passion, it cannot be doubted that there is something in common between 'love' and the religious sentiment (cf. art. CHASTITY). This is so evident that many students have gone to the extent of affirming their complete identity.

The judgment of Fothergill is typical: 'We find that all religions have engaged and concerned themselves with the sexual passion; from the times of Phallic worship through Romish celibacy down to Mormonism, theology has linked itself with man's reproductive instinct' (*Journ. Med. Science*, 1874, p. 198). Even so careful a student as Barton thinks that the 'beginnings of the Semitic religion go back to the sexual relation' (*Sem. Or.* 107), and 'that the religious and moral development of the race has been closely bound up with fatherhood and motherhood' (p. 307).

Since other writers hold the opposite view of this much debated question, and minimize the sexual content of religion or even deny the connexion altogether, the restrictions and limitations of its unqualified acceptance should be pointed out. An enthusiasm, it is claimed, incited by the pursuit of a new theory, has blinded students to the multitude of facts pointing in the contrary direction. Some of them are as follows. The greater number of female deities have little or no connexion whatever with sex. Such, for example, are Ceres and Minerva of Rome, and Sarasvatī and Laksmi of India. Even those of 'love' have often subserved primarily other functions. The Assyrian Ishtar had so departed from the motherly function of her original prototype that, while a chaste love entered into her relationship with her subjects, she was essentially a goddess of war, of battles, of protection, and was oftentimes a violent destroyer (Jastrow, 204 f.). So much does tradition distort her true picture that she has been handed down essentially in her connexion with the tender passion. There is a curious trait in human nature by virtue of which scandal travels farther and faster than sober fact. It must be reckoned with in judging the character of those deities and their worship.

The lively imagination of the supporters of the phallic theory of the nature of religion, it would seem, has led to a confusion and distortion in seeing sexual significance in symbols where none exists. The serpent has clearly been an emblem of lightning, of graceful curves, of sinister presences, and many other things. Its place in religious symbolism cannot justly be called invariably a sign of sex (cf. W. R. Smith, 158, and esp. Brinton, *The Religious Sentiment*, 206–209). The lotus is a token of beauty, of spirituality, and, since it springs forth miraculously from its impure surroundings, of resurrection (Wiedemann, *Rel. of the Anc. Egyptians*, London, 1897, p. 138). Pillars and columns have been loaded down with phallic significance by students from Herodotus to the present day. Others are much more cautious in their generalization (cf. W. R. Smith, 456 f. *et al.*; Moore, 'Ashtoreth' and 'Massebah,' in *EBi*). The way in which doorposts, columns of many kinds, obelisks, towers, and steeples have been seized upon as phallic signs illustrates more clearly perhaps the law of apperception in mental behaviour than the sexual content of religion.

It should be borne in mind, too, that religion has tried to suppress or regulate or even to eliminate every type of eroticism. It has practised and preached celibacy in India, Egypt, Europe, Mexico; and elsewhere it has fostered convents, monasteries, and nunneries with the utmost rigour of discipline (A. Réville, *Native Religions of Mexico and Peru*, London, 1895, pp. 109–111). It has often gone the length of violent sacrifice of virility and femininity in the interest of a life of spirituality (GB^3 ii. 144 f.). As if to purge its highest concepts from too great a strain of amorousness, it has formed doctrines of immaculate conception and virgin birth—notions which are very wide-spread (Brinton, *Myths of the New World*, 172). It has pictured gods as produced full-formed independently of sex, as in the case of Minerva, the virgin goddess, who sprang from the

brain of Jove. It has created goddesses who have ignored and transcended any connexion with 'love.' Because Vesta, the guardian of the home and companion of the hearth, rejected all suitors, Jupiter gave her the place of honour in his palace; and in the sacred temples of men on earth she was blessed with a position of highest reverence. Vestal virgins (as also in Mexico and Peru), whose chastity was forfeited at the cost of life, attended her sacred altar. Those who would magnify the erotic element in religion have been wont to think that the presence of priestesses and their attendants in temples is evidence of sensual practices. While there is much evidence for it, there are equally convincing proofs that religion has succeeded in preserving the chastity of its worshippers (cf. Jastrow, 350). The large rôle that priestesses have filled in ritual and worship is sufficiently explained on the ground of the finer nervous organization of women and their capability of more delicate emotional response, and hence their special fitness to act as oracle-givers, witches, sorceresses, mediums, and diviners of the will of the god (Jastrow, 432, 485, 659). It is fair to judge religions, like individuals, at their average best rather than at their worst.

Such considerations as the above would indicate that between eroticism and religion there is at most a *kinship* rather than an *identity*. Their inter-relation comes about for two reasons: first, the similarities of the psychoses involved, and second, the almost uncontrollable intensity of the reproductive instincts which religion is trying to regulate. On the first point the law is stated correctly by Brinton:

'Stimulate the religious sentiment and you arouse the passion of love, which will be directed as the temperament and individual culture prompt. Develop very prominently any form of love, and by a native affinity it will seize upon and consecrate to its own use whatever religious aspirations the individual has. This is the general law of their relation' (*The Religious Sentiment*, 73).

The other aspect of the law is that religion acts as a control or a regulative function of all phases of life. That sensuality breaks out in it is evidence simply that the strength of the sexual life, due to its utility in conserving biological ends, constantly threatens personal well-being and social symmetry, and that religion has had, therefore, an especially difficult task to keep it in control. This regulation it accomplishes in two ways: by repression, as we have seen, and also by refinement. The refining process consists in the suppression on the one hand of the coarser form of the love impulse, and on the other in carrying it up into the higher levels of consciousness, or 'spiritualizing' it, and there blending it completely with all the other instincts and impulses that subserve life's needs. Phallicisms at their best have in this way been softened and dignified and also weakened by being relatively lost in the rich fusion with other strains of mental life. Griffis, for example, in describing the phallic observances in Japan, says: 'I have never had reason to look upon the implements or the system as anything else than the endeavour of man to solve the mystery of Being and Power' (*Religions of Japan*, p. 51). It is the failure to appreciate this law of the suppression of the lower and over-intense forms of the love impulse, and at the same time the effort to spiritualize and harmonize it with the rest of the complex, that has led to much needless debate and false interpretation of its place in religion.

5. The female element in terms of the meaning of religion as a whole.—The older emphasis of the rôle of love in religion is thus due to the supposition that religion exists to subserve some special function of life. It does not seek to gratify any taste or appetite, but is for the sake of getting on. It seems to be a function of life as a whole, and is in terms of adjustment and fulfilment. It has, like life in all its relations, an 'autotelic' or 'telesthetic' quality that feels after ideal situations. It has also its 'axiopathic' or 'cosmothetic' aspect, by which it seeks delicately to adjust life to the immediate situations around it. The worshipper consequently responds to the present and future in terms of what the need is, and symbolizes those needs with whatever is at hand in the accidents of his surroundings. Among the needs are protection and safety. Gods have been especially useful in this relation. Another need is the increase of crops, herds, and children. Goddesses have been the natural and convenient symbols of *fertility and increase*. Many of them have filled the rôle simply and solely of ensuring the increase of crops and herds except in so far as, by an easy and natural process of association, the life of sex has been caught up as an incident in their worship.

Diana was 'a personification of the teeming life of nature' (*GB*[2], pt. i. vol. ii. p. 124). Even the 'marriages' of gods and goddesses performed in her cult were charms to promote the growth of crops (*ib.* p. 121). In Palestine, during drought, the maidens and women clothed a winnowing-fork in the garments of a woman, called it the 'bride of God,' and performed ritual with it to bring rain. There is no evidence of any sentiment connected with the ceremony except that of exercising a magical influence over the weather. In seeking to compel increase and induce prosperity, mankind has used not only human motherhood as a symbol, but the cow, the bull, the grape, and anything that the imagination could conveniently hit upon. Continence has proved even more effective in bringing good crops than a positive observance of erotic customs (*ib.* pp 104–112). In the rich literature of the Rigveda there were endless reiterations of petitions for abundance of crops, herds, and children, and for protection and success; yet all the deities are male, and there is essentially no evidence of amatory religious sentiments among the gods or men.

Another great problem of religion has been the question of the origin of things. Femininity has again proved a natural and convenient symbol of *creation*—but so has the egg, which may, for example, split, one part becoming the heavens and the other the earth.

'Half of the Çivaite religions are, in fact, characterised by the cultus of an androgyneus or female divinity. The Çakti . . . has its roots . . . in a sexual dualism, placed at the beginning of things (in a Brāhmaṇa of the Yajur-Veda, for instance, Prajāpati is androgynous), or of a common womb in which beings are formed, which is also their common tomb' (Barth, 200).

Femininity is thus clearly *one* factor only in the larger business of religion as adjustment and fulfilment.

6. Sexless deities.—It is suggestive of the limitation of the place of femininity in religion that, along with growth, religion has progressively not only emphasized virgins, continent priestesses, virgin mothers, and celibate goddesses, but has conceived as well sexless and hermaphroditic deities and angels, and also gods and goddesses who transcend considerations of sex entirely. Centring, as the religious impulse does, in feeling after the larger life or 'the sentiment of continuance,' it has thus sought to express the unity of Nature and life in the purely human. It has, therefore, been fond of combining both sexes in one personality, or of fusing, in a deity who happens to be by name of a certain sex (due, let us say, to the limitations of language), the qualities of the opposite sex.

'In the Vatican Apollo we see masculine strength united with maidenly softness: in the traditional face and figure of Christ a still more striking example of how the devout mind combines the traits of both sexes to express the highest possibility of the species' (Brinton, *The Religious Sentiment*, 67).

Were it not for the fact that gods, irrespective of sex, subserve the higher functions of protector, helper, and unifier, how could one explain the fact that Ishtar sometimes appears as female among the Semites and as male among the others?

In the highest monotheisms the Deity has risen superior to sex. The God of Muhammad, while calling forth a holy prophet from a virgin mother,

'begetteth no children'; to impute such to Him would be so gross an impiety as to threaten the cleaving of the heavens asunder and the destruction of the earth.

'It is not meet for God that He should have a son; God forbid! When He decreeth a thing He only saith unto it "Be" and it is' (Qur'ān, xix.). 'He begetteth not, neither is He begotten' (cxii.).

Such likewise are Brahma and Jahweh.

'In Christianity, and already in the spiritual religion of the Hebrews, the idea of divine fatherhood is entirely dissociated from the physical basis of natural fatherhood. Man was created in the image of God, but he was not begotten; God-sonship is not a thing of nature but a thing of grace' (W. R. Smith, 41).

More barbaric religions, not being able to think in terms of æsthetic or moral values or general concepts, have been compelled to picture things in more concrete terms. Deities have sometimes been, therefore, progenitors, just as at other times they are potters who shape men from clay.

Particularly among uncultured people it has been a convenience to represent 'Reality,' the higher self, and the present and possible relationship of the two in the imagery of human relationships; and it is, therefore, natural that the tender passion should have been seized upon as a convenient analogy. Along with increased enlightenment, however, every aspect of the 'love-life' is either taken up into the higher world of religions values in a softened, refined, or almost imperceptible form, or transcended and left behind. Both these things are likely to happen, each in its own way.

7. Summary of psychological theories.—The interpretations of our problem from the standpoint of psychological discussion have been extremely diverse. Although somewhat antagonistic among themselves, there is doubtless some truth in each and all of them. Characteristic theories are here described, arranged as far as possible in a series from the least to the most satisfactory.

(*a*) *Degeneration.*—A popular conception has been that there is little or no connexion between the female sentiment and religion. Whenever they have mingled, it is because the reproductive passion has broken through its proper bounds. This notion of their antithesis has arisen out of the law of contrast, by which the high and the low, the good and the bad, are sharply set off against each other. This inevitable tendency has gradually produced the two incompatible worlds of 'grace' and 'nature,' the 'sacred' and 'secular'—a contrast unknown to the primitive mind—with 'religion' confined to the one sphere, and the biological function of reproduction to the other; and it has ended in many countries in a radical asceticism. Modern developmental conceptions have undermined such artificial distinctions. The truth of this notion rests upon the vast difference, through development, between the 'lower' and the 'higher' which is the refined, intellectualized, and controlled expression of the tender passion; and upon the fact of the strength and persistence of sex, with its consequent dangers from the crasser forms of its expression. Its falsity centres in the resultant divided and incoherent personality, the sensualizing of the biological function by freeing it from the control of the higher sentiments, and in limiting religion to a relatively narrow field of highly abstracted values.

(*b*) *Identity.*—Many students take exactly the opposite view, and regard the religious impulse as primarily, if not solely, the refinement of reproduction. Love in religion is a spiritualized form of love for mates. In the development of individuals the curve of frequency for conversions and other religious awakenings is essentially coincident with that of the maturing of the reproductive functions (Starbuck, *The Psychology of Religion*, London, 1899, ch. iii.). The phenomena attending the stress of conviction for sin are similar to the disturbances of sex (*ib.* 168, 206). There are marked likenesses between 'love' at its highest and mystical states of religion (Hall, *Adolescence*, New York, 1904, ii. 295–301). A genetic series of 'love-states,' from its physiological setting to its highest spiritualized and mystical qualities, identical with those of religion, is easily describable (*ib.* ii. 126–143). The pathology of the two shows remarkable similarities.

'In the female especially the erotic delusion, unknown to the patient herself, often assumes the color of the religious' (J. T. Dickson, *The Science and Practice of Medicine in Relation to Mind*, New York, 1874, p. 383; cf. Ellis, 231 ff.). Murisier remarks: 'The passion of the religious ecstatic lacks nothing of what goes to make up sexual love, not even jealousy' (*RPh*, Nov. 1898).

The evolutionary background of love is traceable, from reproduction, to sex and the family, and on through the larger tribal self until it includes attachment to humanity and to God (Drummond, *The Ascent of Man*, New York, 1894, pp. 215–318). Added to these psychological and biological evidences are those of a sociological character considered above.

Whilst these massed evidences are on the surface extremely convincing, a more careful analysis will show that, although they are true within limits, the supposition that religion and spiritualized 'love' are identical is a hasty one, with rather more error than accuracy in it when applied to developed religions. The reasons for thinking so are that, looked at empirically, the highest religions of the present, barring exceptions and distortions, look as if they had other than erotic significance, no matter how spiritualized the phallic content; a comparative and genetic study of the facts seems to show that phallic symbols and rites, in so far as they are found at present, are relics, or rudimentary marks, of an earlier attempt to regulate promiscuity; the biographical and autobiographical evidence would indicate that more frequently than otherwise the effect of 'getting religion' is either the control of the passions or their uprooting and the substitution of a set of values which cannot, except by the liveliest play of the imagination, be called irradiations of sex; love in religion has psychologically at least two other sources besides the reproductive impulse; and, finally, religion is the fusion of *all* the instincts and emotions, and not the one alone.

(*c*) *Regulation.*—Religion — man's sentiment of continuance and feeling after perfection, or, as theologians prefer to call it, God's revelation to the mind and guidance in the heart—has been trying to control life as a whole. Among other things it has tried to incorporate the reproductive instinct in order to regulate its intensity and to eliminate promiscuity (Marshall, *Instinct and Reason*, New York, 1898, pp. 309–315). In earlier times, biologically, in the absence of the care of children, the perpetuity of the species depended upon multiplicity of offspring. Under such circumstances there must have been a utility in an uncontrolled passion for reproduction. The laws of heredity and recapitulation have brought up this old strain into human life. The conditions later changed. With the increased advantage to the species of having the family as the basis of social organization, the condition of advancement was the establishment of monogamous marriages, and the consequent weakening of the sexual impulse. Religion is in part the crystallization of this feeling of the need of such regulation. It has, therefore, taken over into itself the function of sex and marriage, and has used every conceivable means of exercising control over them. It has hedged them about with social sanctions, under priests who are frequently celibates or eunuchs, with ritual and ceremony too solemn to be disregarded, and with gods and goddesses whose will could not

be withstood. It has made marriage difficult to enter, has tested the fitness of mates by periods of long delay, and has sealed their union by forbidding divorce. It has uttered its admonitions, prohibitions, and punishments; and in every way has attempted to restrain the passions, and direct the mind into a sense of the dignity and sacredness of this phase of life, when limited to the channels of social and spiritual well-being.

(*d*) *Adaptation.*—But religion has at times assumed the positive attitude of stimulating the reproductive impulse under its controlled form. The reason for this is to be found in the social sense of the need of increasing the number of individuals in the tribe or nation, combined with the individual recognition of special fulfilment through progeny. Primitive warring tribes have shown much concern over the birth of the greatest possible number of male children. It is natural that this need should be taken up and made part of the business of religion. No warrior could enter Valhalla in early Germanic times who had not begotten a son. Among the Mormons one's condition and position in heaven depends upon the number of offspring brought forth under the regulation of the 'family.' Modern governments have taken seriously the problem of encouraging marriages and the production of large families. Since, now, the regulation and stimulation of such matters has come over, through specialization, into a body of social customs and also under State control, it has inevitably come about that religion has progressively busied itself, to a greater extent relatively, with ideal adjustments irrespective of the relation of mates. So much is this the case that in the empirical study of the religious confessions of normal persons at the present time there is ample evidence that the instinct in question is a hindrance to the spiritual life and must be curbed (Starbuck, 402).

(*e*) *Composition.*—Religion is a compound of all the instincts and emotions, while the female sentiment is but one of these, and, as we have seen, one that has tended in the higher forms of religion to lapse into relative insignificance. The laws of the refinement of the instincts and of their fusion, already referred to, have carried up into religion a rich blending of fear, self-regard, hunger, self-expression, love, curiosity, and many others. Each of these can be traced from its simple, crude form to its spiritualized expression, where it mingles in some measure with every phase of the mental life. It has been a fascinating theme of students to trace out these relations. Fear, for example, betrays itself by the presence in religion of demons, hell, sacrifice, priestcraft, and the like, and also, with a slight blend from other instincts, as the sense of majesty and reverence, which characterizes religion at its best. Self-regard, likewise, develops from the seeking for mere benefits upwards to the craving for perpetuity through immortality, and at last becomes the æsthetic demand for ideal perfection. The temptation of such procedure, since a certain instinct permeates entirely the higher religious life, is to give way to the fascination of the description, and conclude, therefore, that religion is *nothing else than* the single instinct in question. It is analogous to the procedure of an amateur chemist who should be entirely satisfied with discovering a single element in a compound, because he is sure that it permeates every part of the solution. There is perhaps not an instinct that does not, and with much accuracy of description, seem to be the all-filling source and content of the religious life. The enthusiasm of the sex psychologists in particular, during recent years, has resulted in a strange confusion. Many of the facts that seem to them to prove the identity of the female sentiment with religion only want more careful scrutiny to betray their insufficiency. Much has been made of the coincidence and concomitance during adolescence of reproductive and religious awakenings. (On the similarity of these curves of frequency, see Starbuck, ch. ii.; on the value of this kind of reasoning, consult W. James, 11 f.) There is no evidence, however, of a causal relationship. On the contrary, it is clear that for the most part on the mental side they are contradictory and antithetical. The coincidence seems to be due to the prevalence of initiation ceremonies practised among all primitive peoples. The modern equivalent is a custom of confirmation. These ceremonies celebrate the entrance of young men and women into the social, political, and religious ways of the clan, and mark at the same time the fitness for marriage. A process of long social selection in connexion with these ceremonies, through weeding out the mentally and physically unfit, has called out and accentuated the eventful period of early adolescence, with its marked readjustment in the complex strains of character, and the sudden calling out of latent powers. Since the mental and physical characteristics are the same essentially as are necessary to good citizenship on the one hand, and the responsibility of family life on the other, and, since the social group has sought through these ceremonies to prepare young men and women for both the civic and the marital relationship, it is but a matter of course that the awakenings of sex and religion should be synchronous. Keeping in mind the distinction between the *cause* and the *condition* of a mental happening, one may safely say simply that frequently in adolescence the explosive quality of the 'love' instinct touches off a large stock of activities, insights, and interests which are not of sexual origin, and among these the religious impulse. But religion is 'touched off' also by a score of other adolescent nascencies, such as scientific insight, logical acumen, and the joy of conquest, and much more frequently so than by the sexual impulse. So markedly is this true that it is not safe to conclude that the reproductive instinct furnishes to any considerable degree the raw material out of which religion is constructed.

The reasoning from the pathology of sex and religion is equally at variance with the facts. That the pathologies of eroticism are likely to take on a religious cast none will doubt. This is the correct clue to the psychoses of many religious fanatics. In the case of Swedenborg, for example, the evidences from his journal and from his writings are conclusive that his 'divine love' and 'angelic wisdom' are—not wholly, but in large part—the effluvia from an unstable and over-excitable erotic temperament. Other instances can be found, particularly among the radical mystics. They are the exceptions, however, from which alienists have derived too sweeping generalizations.

Religious and sexual insanities are both extremely complex psychoses. Each draws from many sources. There are on the one hand many religious insanities that have no sexual setting (D. H. Tuke, *Dict. of Psychol. Medicine*, Philadelphia, 1892, p. 1091 f.), and on the other many kinds of sexual insanity that do not take a religious turn. The small part that either sex or religion occupies in the whole range of insanities is indicated by statistical studies. Out of 66,918 male inmates in the asylums of England and Wales during the years 1878–1887 there were but 2·5 % whose disturbances took the form of religious excitement, and only 4·9 % traceable to sexual or reproductive causes (H. Ellis, in Tuke, p. 1154). It is from these two small and relatively incompatible fields that the facts have been found from which wholesale conclusions have been obtained. Not only does the sphere of insanity draw from many other sources than sex, but religion is

an indefinitely bigger thing than mysticism, which itself only occasionally shows exaggerated eroticism. That there is more in religion than irradiations of sex is suggested by the fact that alienists often recommend it in the treatment of insanity for its humanizing, restraining, steadying, and stimulating influence (cf. Gasquet, in Tuke, 1088–91). Nor can this be suspected as an instance of *similia similibus curantur.* The occurrence, it should be said, of the interplay of erotic mysticism and sexual insanity is due to the law of association which operates amongst the emotions no less than in the cognitive processes. Religion is the whole-hearted response of the devotee to his sense of absolute values. Its psychoses tend to be completely obsessive and voluminous. This is the character, too, of all the instincts, particularly of the sexual emotion. It is to be expected, therefore, that in the exaggerated form mysticism and eroticism should blend, even if, as is true, they draw for the most part from different sources and have a somewhat independent history.

The gravest oversight of the identity theory of the female sentiment and religion is the supposition that love, which is the central fact of religion, has had its sole origin in sex (cf. Mercier, *Sanity and Insanity*, London, 1890, p. 220 ff.). But love is a compound. It has at least three somewhat independent sources—sex, gregariousness, and Nature appreciation. The evolution of the first has brought into religion the tender affection for kind, while its exaggeration results in phallicism and eroticisms of many sorts. The refinements of gregariousness have created the sentiments of fellowship, sympathy, and loyalty to kind, regardless of sex, and when excessive have produced clannishness on the one hand, and unreflecting missionary zeal on the other. Nature appreciation, the sheer enjoyment of things in and for themselves, has ripened into a sense of presences within objects, and at last into Nature-gods and Nature-religions. Gregariousness, or 'sociality,' as M. J. Guyau calls it (*Non-Religion of the Future*, London, 1897, p. 44), can exist independently of sex. In his fine analysis, Ribot (*Psychology of the Emotions*, London, 1897, pp. 276–303) points out that gregariousness is founded upon nutrition, the will to live, and the attraction of like for like, irrespective of sex, while the tender emotion is founded upon sex and mother-love. These two, although having an element in common, have remained, in the course of evolution, 'distinct and mutually independent' (p. 280). It is, furthermore, in connexion with the gregarious life, irrespective of sex, that the true social and moral feelings are developed, whereas the sentiments that arise in connexion with 'domestic aggregates' based upon the tender emotion are 'restricted to a closed group, without expansive force or elasticity' (p. 281). Societies formed within the same sex, or even among members of different species, or among animals like bees and ants in which reproduction is but a brief incident for perpetuating the species and limited to a few—all such societies, because of their common interests and contacts, show loyalties, fellowships, and loves of the most saving kind. The co-operation is based upon the instinct of conservation, and the attraction is derived from the interplay of personalities which becomes part of the mental and spiritual furnishing of each individual, in the absence of which there is distress, and in its presence enrichment and enlargement. If this dualistic theory of the separate origin of the family group and the social group is correct, as seems highly probable, the evidence of comparative and genetic psychology would be that morality and religion, which are primarily in terms of fellowship, have drawn far more from the gregarious instinct than from sex. The empirical evidences, as we have seen, emphatically support this view. In this connexion it is suggestive that sex is but a specialized form of reproduction, the latter having been performed originally by cell-division, and that both reproduction and sex are functions of the will to live. The reproductive system, for example, is a specialization, embryologically, of the nutritive organs. These considerations would seem to fortify the point of view that religion exists fundamentally in the interest of the adjustment and fulfilment of the developing higher life, and not for the sake of any special sentiment.

The root of the difficulty, then, with the identity theory of sex and religion is, in the first place, the failure to appreciate that love in religion is a compound of the tender emotion, the gregarious instinct, and Nature attachments, the first suffusing the other two with an æsthetic quality, and furnishing them with a basis for external reference; secondly, the failure to see that religion is a compound of all the instincts. The female sentiment is, therefore, but one of the ingredients—more important formerly than now—in a rich compound of sentiments called by the single name 'religion,' whose function is ideal adjustment.

LITERATURE.—This has been indicated in the article.

EDWIN D. STARBUCK.

FENG-SHUI.—Chinese dictionaries give no definition of what is to be understood by Feng-Shui. No native treatises expound it upon scientific lines. *Feng* is 'wind,' *shui* is 'water.' Wind is what cannot be seen, and water what cannot be grasped. 'Wind and water' is the term, therefore, for the occult powers which are always bearing down upon human life. Professors of Feng-Shui prefer that it should remain a mystery, and those who pay them for their services accept the position, declaring that it is not to be expected that common people should understand the unfathomable. Eitel (*Feng-Shui, or the Rudiments of Natural Science in China*) calls it 'a conglomeration of rough guesses at Nature.' It undoubtedly grew out of naturalistic beliefs, though it has become distorted and degraded into a gross superstition.

Practically there is little religion in China but such as springs out of Feng-Shui. The worship of ancestors, the most popular of all religious observances, is indissolubly connected with it. It enters into every important arrangement of daily life. Every proposed change must be brought to the test of its principles. All events which happen, favourable or adverse, are explained by it. It is spoken of with reverence and awe. The common people are its slaves. Confucianist gentry laugh at the Feng-Shui doctor, but are careful to fall in with his theories and commands. Chinese law does not discuss it, but the courts always act on the presumption that its principles are not fictitious. The Government, though not acknowledging it, publishes every year an Imperial almanac giving all the lists, figures, and diagrams which are required by its professors and their victims. When a rebellion breaks out, the first act of the authorities is not to raise troops, but to send messengers to spoil the Feng-Shui of the rebel leaders by despoiling their ancestral tombs. And, when selling land to foreigners, the mandarins are careful to assign them only what is believed to have bad Feng-Shui.

S. Wells Williams (*The Middle Kingdom*, ii. 246) remarks that this geomantic and spiritualistic faith became systematized in the times of Chu Hi, who lived under the Sung dynasty (A.D. 1126–1278). Chu Hi's commentaries on the Chinese Classics are read in every school; and his mode of thinking has been adopted by modern Confucian-

ism. His theory is that the soul has a dual nature, consisting of the *animus* and *anima*—sometimes called the breath of Heaven and the breath of Earth. The *animus* is the male or spiritual element in the soul; the *anima*, the female or material element. So long as a man lives, these two principles co-exist in combination, but at death the union is dissolved. The *animus* returns to heaven, the *anima* to earth. Neither of them wanders at large in space. The *animus* enjoys freedom of movement, but chooses to limit its peregrinations to the vicinity of its former *habitat*, and to the company of the people with whom it was formerly associated. The *anima* lies quiet in the tomb, provided that the tomb has good Feng-Shui. The Chinese believe themselves to be compassed about by a great cloud of witnesses in the persons of their ancestors and forbears generally, and they hold that the spirits of these deceased relatives are omnipresent in the elements of Nature.

Here we arrive at the practical point which is of such extreme interest to believers in Feng-Shui. The selection of a grave is the most vitally important matter in a man's life. The quiet repose of the *anima* in its tomb is essential to the well-being of its mortal relations. The tomb must be in such a position that the *anima* will be undisturbed and quiescent; in which case it will be disposed favourably towards those members of its family who survive. If otherwise, so low is its ethical character in this disembodied state that it will make havoc of their fortunes.

The Feng-Shui Sien-Sang, or doctors of the geomantic art, know how to profit by these delusions. They are ridiculed and satirized, but universally feared. Nothing affecting the welfare of a family can be decided without their help. They are called in for consultation on a great variety of occasions. Guided by a curious compass with cabalistic signs, they solemnly profess to be able to judge whether a grave is in the proper position, whether it is safe to build a house on a particular spot, or whether a business is likely to prosper where the shop or office stands. If the client is rich, it takes a long while, so the Chinese say, for the learned doctor to arrive at a decision. A coffined corpse may have to remain for years on a shelf in a temple, or to lodge under a shed, till all appears secure. Or, disasters may befall the family after the burial of their relative; whereupon the Sien-Sang declares that the bones must be unearthed and stored in a jar until better Feng-Shui has been discovered. In some districts vast sheds are filled with coffins awaiting burial. Elsewhere tens of thousands of great jars with human remains find shelter at the foot of rocks facing the south, all of which are owned by the survivors and respected by the populace. Any one disturbing them would do so at the risk of his life. A temporary pagoda is sometimes erected as a regulative influence in order to test the quality of the Feng-Shui. If the crops are good, and no pestilence breaks out, and some talented youths in the district win honours at the local examinations, the Feng-Shui is proved to be good. A permanent pagoda then takes the place of the temporary one. These pagodas, as regulating the streams of spirit influence in warding off the evil or attracting the good, are supposed to exercise a remarkable power in producing talent in students. For this reason they are shaped with high pointed roofs in imitation of a pencil or writing brush; and they are often spoken of as 'towers of literature,' the topmost storey being furnished with an image and shrine of the god of literature.

As it is necessary sometimes to build a pagoda to attract or to divert streams of lucky influence, so it is sheer madness to build tall chimneys, to place chimneys on houses, to erect telegraph poles and semaphore signals, to cast up a railway embankment, or even to dig for coal. There is no knowing what mischief may be done by such rash adventures.

Some German missionaries near Hong Kong built two little watch-towers on a house. One of these was visible at a tomb a mile away. Its enraged owners threatened to burn down the whole mission premises. The missionaries argued that the spirit of the deceased could see the little watch-tower only if he stood up, but not if he was lying down quietly in his grave. No discussion was of any avail until the disturbance to the dead was compromised by a substantial money payment to the living!

Much of the violence of the people in Canton, Tientsin, and Peking against foreigners and Christianity is due to the erection by Roman Catholics of lofty cathedral buildings, which upset the Feng-Shui of the whole district. The objection to railways, with their cuttings, tunnels, embankments, and signal-posts, is of the same nature. The first railway in China, from Shanghai to the port of Wu-sung, nine miles away, was purchased and destroyed by the Chinese, on the plea that the speed of the train destroyed the Feng-Shui of tens of thousands of people on both sides of the line.

With a view to warding off evil influences which are presumed to exist, the custom prevails of building brick walls as shields or screens. On these are painted lucky symbols, or words of defiance, or the rampant figures of savage beasts.

When the Feng-Shui is bad, it can be improved. A low hill may be raised, or a rugged hill-top may be lowered. A straight road or watercourse may be made serpentine. A pond may be laid out on the south side of a cemetery, or a tree which obstructs the favourable spirit-breezes may be cut down.

The Chinese believe that the British have mastered the whole science and art of Feng-Shui. To quote Eitel's reference to the evidences of this in Hong Kong:

'Hong Kong, with its abundance of rocks and boulders scattered about on the hillside, abounds in malign breath, and the Chinese think our Government very wise in endeavouring to plant trees everywhere on the hill to screen these harbingers of evil. But the most malicious influence under which Hong Kong suffers is caused by that curious rock on the edge of the hill near Wanchai. It is distinctly seen from Queen's Road East, and foreigners generally see in it Cain and Abel, Cain slaying his brother. The Chinese take the rock to represent a female figure, which they call the bad woman; and they firmly believe that all the immorality of Hong Kong, all the recklessness and vice of Tai-ping-shan, are caused by that wicked rock. So firmly is this belief impressed upon the lowest classes in Hong Kong that those who profit by immoral practices actually go and worship that rock, spreading out offerings and burning incense at its foot. None dares to injure it; and I have been told by many otherwise sensible people that several stone-cutters who attempted to quarry at the base of the rock died a sudden death immediately after the attempt.'

From all this it will be perceived that Feng-Shui is not strictly a religious doctrine. It is held by no sect. It has no temple, no priesthood, no ritual. It founds no college, nor has it even an authorized professorship. Yet its occult influences pervade the whole of Chinese society. It might be called a materialistic fatalism, by which not merely happiness and misery, but virtue and vice are generated. Its origin is the current of Nature's breath over the surface of the earth, the configuration of the landscape deciding the limits of its powers. It is a mode of thought characteristic of primitive times. It views heaven and earth as one great fetish, animated (as Eitel points out) by a blind, unintelligent, but omnipotent vitality. Its similarity to astrology is obvious. Instead of stars it speaks of hills. Rivers and lakes take the place of the Milky Way.

Philosophically, it maintains that the primordial cause of all existence was that the 'Absolute Nothing' evolved out of itself the 'Great Absolute.' When it began to move, the great male principle came into being; and when it rested, the female

principle was produced. The whole universe is a living organism, in which these two principles are at work. When they are happily combined, favourable influences bear down on human life; and when inharmonious, the malign breath of Nature exhales disasters upon mankind.

How to avert these calamities is the aim and purpose of Feng-Shui. The configuration and character of the soil determine the weal and woe of those who live upon it. Sloping hillsides, groups of trees, pools of water, and especially winding roads, when properly situated and combined, secure the largest measure of peace and happiness, of health and wealth. By means of his almanac and his compass the Feng-Shui doctor can detect and describe what will happen to the relatives of the friend whom they are about to place in his grave.

Buddhism and Taoism have been degraded into the position of the handmaids, or rather the slaves, of this superstition, which holds hundreds of millions of the human race in its grip. The degradation of Taoism, in particular, has been due to its alliance with Feng-Shui. The human heart cries out for fellowship with the powers of Nature. Neither Confucianism (with its materialism) nor Buddhism (with its transcendentalism) ever satisfied the Chinese mind. The craving for communion with Nature found its expression in the curious geomantic system of Feng-Shui, which commands the secret sympathy, if not the distinct approval, of every Chinaman, high and low. This blind groping of the Chinese mind after a system of natural science in which it can rest has been called 'the very audacity of superstition'; but it will not be able, any more than the folklore of Christian nations, to withstand the impact of sound education, of genuine science, of engineering progress, and especially of the enlightenment that comes with Christian faith.

FESTIVALS AND FASTS.

FESTIVALS AND FASTS (Armenian).[1]—In the ancient Armenian calendar there are two kinds of abstinence—absolute and relative. *Absolute abstinence* (fasting) is practised on the first 5 days of *Aradjavorkh* (three weeks before Carnival Sunday), and for the 6 weeks of Lent, beginning with Ash-Wednesday and continuing till the Saturday before Palm-Sunday (but see below). *Relative abstinence* prevails every Wednesday and Friday in the year, and also during (*a*) the week of Pentecost (the abstinence of the prophet Elijah), 5 days; (*b*) the week preceding the Feast of Gregory the Illuminator (the 3rd week after Pentecost), 5 days; (*c*) the Transfiguration (the 6th week after Pentecost), 5 days; (*d*) the week preceding the Sunday of the Assumption of the Holy Virgin, 5 days; (*e*) the week preceding the Sunday of the Exaltation of the Holy Cross, 5 days; (*f*) the week preceding the Feast of St. George, or the Feast of the Cross of Varag; (*g*) the week preceding the Feasts of Archangels and Angels; (*h*) the week of Jubilee; (*i*) the week preceding the Feast of St. James of Nisibis; (*j*) the 7 days preceding the Christmas Epiphany-Feast.

During Lent there is no fasting on Saturdays and Sundays, and the same holds for all Holy Week, but abstinence is practised. In none of the above-mentioned cases is abstinence practised on Saturdays, except on the eve of the Transfiguration, of the Assumption, of the Exaltation of the Cross, of Christmas, and of Easter; on these days milk-food, eggs, and fish are eaten. During a fast, only vegetables, fruits, and sweetened things are eaten; olives are admitted as fruits, and olive oil is not forbidden. On abstinence days, vegetables, fruits, sweet things, dishes with olive oil, etc., are eaten.

1. Great Feasts (*taghavar*='tent,' 'tabernacle').—There are five Great Feasts:

1. Christmas-Epiphany.
2. Easter.
3. Transfiguration.
4. Assumption.
5. Exaltation of the Cross.

All these are preceded by a week of abstinence, and on the eve of them milk-food, eggs, and fish are eaten. These feasts, except Christmas-Epiphany, always fall on a Sunday. The second day of all five is also a holiday devoted to the commemoration of the dead, when the people march to the cemetery in procession, after High Mass.

2. Feasts held in common with the other branches of Christianity.—

1. Purification of the Holy Virgin.
2. The Annunciation.
3. The Ascension.
4. Pentecost.
5. Trinity.
6. Nativity of the Holy Virgin.
7. Presentation of the Holy Virgin.
8. Conception of the Holy Virgin.

The Sunday preceding the weekly abstinences discussed above is called by the Armenians the *Carnival* of the Feast.

3. Feasts peculiar to the Armenians.—

1. The 8th day of Epiphany, the baptism of Christ.
2. The Great Carnival of *Aradjavorkh*; this is a fixed Sunday, the 10th before Easter. On this day the conversion of the Armenians to Christianity is commemorated (see F. Macler, *Mosaïque orientale*, 1907, p. 34, n. 1).

[1] See also art. CALENDAR (Armenian) and the Literature there cited; also Ormanian, *Church of Armenia*, Eng. tr., London, 1912, p. 175 ff.

3. Every Sunday of Great Lent commemorates a parable of the Gospel.
4. For forty days after Easter there is the Feast of the Resurrection; there is no other feast during this period except the first Saturday after Easter, which is the day for commemorating the beheading of John the Baptist.
5. The first Sunday after Easter is called New Sunday, and commemorates the doubt of St. Thomas.
6. The second Sunday after Easter is the Feast of the Church, instituted by Gregory the Illuminator, in commemoration of the pagan feasts; it is called the Sunday of the Chapel of the Native Land, or *Green* Sunday.
7. The third Sunday after Easter is called *Red* Sunday.
8. The fifth Sunday after Easter is the Feast of the Apparition of the Holy Cross.
9. The seventh Sunday after Easter is called the 2nd Sunday of Palms; it is the commemoration of the appearance of the angel to Gregory the Illuminator in his well-prison (*virap*).
10. The second Sunday after Pentecost is the Feast of the Church of Etchmiadzin. It commemorates the appearance of Christ to Gregory the Illuminator in the church of Etchmiadzin.
11. The 2nd of July is the Feast of the Bier of the Holy Virgin.
12. The 31st of August is the Feast of the Ungirding of the Holy Virgin.
13. The second day after the Exaltation of the Cross is the Feast of the Cross of Mount Varag.
14. The Sunday six weeks before Christmas (*hisnagats barekendan*) is Jubilee Sunday.

4. Feasts of the Saints.—As Feasts of the Saints are not allowed on Sunday in the Armenian Church, the important ones are always held on a Saturday, *e.g.* the Feasts of St. Gregory, St. George, St. Sargis, St. Nicolas of Smyrna, the Archangels and Angels, etc.; while the national Armenian saints have their feasts, as a rule, either between *Arad-javorkh* and the Great Carnival, or between Trinity week and the Transfiguration. The list of feasts given by Conybeare (*Rituale Armenorum*, Oxf. 1905, p. 527 ff.) is based on the Armenian months, to be used in the reading in the churches after vespers.

5. Traces of paganism in the Armenian feasts.—(1) *Vardavar.*—The last five days of the year (*awelikh*) were sacred to the goddess Astlik (*vardadzri*=' she who makes the rose grow'). Gregory the Illuminator, in order to preserve this pagan commemoration and to sanctify this feast, transferred it to the Feast of Transfiguration. Further, the Deluge was commemorated on the first day of the Armenian year; Gregory now fused these two feasts into one. Down to the present day it is customary for the people, on the day of Transfiguration, to asperge one another in the church, in commemoration of the Flood (cf. *ERE* i. 796; for an interesting pagan survival in the celebration of Ascension Day by a water and flower festival, see Abeghian, *Armen. Volksgl.*, Leipz. 1899, pp. 61–66).

(2) *Victory of Haik over Bel.*—This feast was celebrated on the 11th of August. According to tradition, Haik began the year on 11th August, the day of his victory over Bel. This day, then, was called 'Haik's day,' and was a national festival. Gregory the Illuminator wished to retain this feast; and so, on his return from Cæsarea, he brought the relics of St. John the Baptist and St. Athanagenius to Taron, where he built the monastery of Surp Garabed (Karapet), which still stands and is known under the name of Sultan of Mush. Gregory arranged that the Feast of St. John the Baptist should be celebrated on the same date as the pagan feast. After the fall of the Arsacid dynasty, this arrangement was abandoned, and the Feast of St. John the Baptist passed over into the ranks of the simple Feasts of the Saints.

(3) *Feast of Diana* (*Anahit*).—A fortnight after the beginning of the year, on the 15th of Nawasard, came the Feast of the goddess Anahit (on whom see *ERE* i. 797). Gregory the Illuminator transformed this into the Feast of the Image of the Holy Virgin, brought to Armenia by St. Bartholomew. In place of the statue of Anahit he put the picture of the Virgin, and the celebration was fixed for the 15th August, the Feast of the Assumption of the Virgin (cf. Alishan, *Souvenirs of Native Armenia*, Venice, 1869, *passim* [in Armenian]).

F. MACLER.

FESTIVALS AND FASTS (Buddhist).—The Buddhist canon prescribes the following festivals and fasts.—**1. Uposatha.**—The *Uposatha* days owed their existence to the ancient Vedic custom of holding sacred two periods in each month—the times of the new moon (*Darśa*) and the full moon (*Pūrṇamāsa*). These feast, or sacred, days were called *Upavasatha*, and offerings of intoxicating soma were made in connexion with the worship of the moon.[1] According to Buddhist tradition,[2] the monks of non-Buddhistic sects were accustomed to meet together at the middle and at the close of every half-month in order to proclaim their new teaching in public. At such times the people gathered together, and the different sects found their opportunity of increasing their numbers and influence. The Buddhists adopted the custom of these periodical gatherings, but confined themselves to meeting twice in each month.[3] In later times the intermediate quarter-moon days were also held sacred, and so the number of *Uposatha* days was increased to four in every month.[4] The words of the canon are: 'I prescribe that you assemble on the fourteenth, fifteenth, and eighth day of each month.'[5] In the *Dhammika Sutta* the wording is: 'Moreover, being of a pious mind, one should observe *Uposatha* on the fourteenth, fifteenth, and eighth day of the lunar fortnight.'[6] The fourteenth and fifteenth days must be taken to mean the fourteenth day from the new moon in short months and the fifteenth in long.[7]

Though the idea of four monthly fast-days was borrowed from Brāhmanism and other non-Buddhistic sources, the manner in which they were kept was entirely original. It was not proper to trade or do any business; hunting and fishing were forbidden; schools and courts of justice were closed. They were also, from ancient times, fasting-days. The laity were to celebrate the days with clean garments and clean minds.[8] Special observance of the moral precepts was inculcated on these days. In the *Dhammika Sutta* the eight precepts are detailed, and it is added: 'Such, they say, is the eight-fold fast (*Uposatha*) declared by Buddha, who came among us to put an end to sorrow.' The eight precepts were: (1) not to destroy life; (2) not to take what is not given; (3) not to tell lies; (4) not to become drinkers of intoxicating liquors; (5) to refrain from unlawful sexual intercourse—an ignoble thing; (6) not to eat unseasonable fruits at night; (7) not to wear garlands or use perfumes; and (8) not to sleep on a mat spread on the ground.[9] Furthermore, the brethren and sisters were to make use of the gatherings to confess to the assembled Order the sins and faults which each had committed, and to take upon themselves the penance which the transgression had incurred.[10]

At this *Uposatha* ceremony the *Pātimokkha*, which forms the second Khandhaka of the *Mahāvagga*, had to be recited. 'This (*Pātimokkha*) will be their *Uposatha* service.'[11] Explicit directions are given in regard to the ceremony: an *Uposatha* was to be held in a clearly defined district;[12] at

least a given number of *bhikkhus* were to be present;[1] sick ones might be excused attendance;[2] certain offences precluded attendance;[3] directions are given for the preparation of a hall in which the ceremony was to be held;[4] the *Pātimokkha* had to be recited in full at each *Uposatha*, except in certain cases of danger, etc.,[5] and offences were to be confessed.[6]

In addition to the regular fast-days it is laid down that the *Pāṭi-hārika pakkha* should also be duly observed.[7] This name, meaning 'extra fortnight,' applies to three distinct periods: (1) the three months of *Vassa*, or rain; (2) the month succeeding *Vassa*, called *Chīvara Māsa*, or 'robe month,' because it was customary to provide mendicants, who needed them, with new robes; and (3) the first half of the 'robe month,' to which period the term more particularly applies. During these periods the observance of the 'eight precepts' is more common than at other times.[8]

An occasional holiday, only for monks, is the *Sāmaggi-Uposatha*, 'reconciliation holiday,' which was held when a quarrel among the fraternity was made up.[9]

2. Vassa.—Throughout his whole career Gautama was in the habit of travelling about during most of the fine part of the year, teaching and preaching to the people, but during the four rainy months, from June to October, he remained in one place, devoting himself more particularly to the instruction of his followers.[10] *Vassa* was ordained because the people complained to Gautama that the Buddhist priests were going on travels alike during winter, summer, and the rainy season, so crushing the green herbs in the field, hurting vegetable life, and destroying the life of many small living things.[11] The institution of *Vassa* was Gautama's answer to these complaints. It is a retreat prescribed for the rainy season. Buddhaghoṣa says:

> 'The *bhikkhus* are to look after their Vihāra (if it is in a proper state), to provide food and water for themselves, to fulfil all due ceremonies, such as paying reverence to sacred shrines, etc., and to say loudly, once, or twice, or thrice, at the beginning of the retreat, "I enter upon *Vassa* in this Vihāra for these three months."'[12]

The periods fixed by Buddha for entering upon *Vassa* were two: 'the earlier and the later. The earlier time for entering (upon *Vassa*) is the day after the full moon of Āsâlha (June–July); the later, a month after the full moon of Āsâlha.'[13] The double period was probably due to a similar double period prescribed in the Brāhmanas and Sūtras for most of the Vedic festivals. Thus the sacrifice of *Varuṇapraghāsa*, with which the Brāhmans began the rainy season, was to be held either on the full moon day of Āṣāḍha, or on the full-moon day of the following month, Śrāvaṇa, in complete accordance with Buddhistical rules about the *Vassupanāyikā*. The Brāhmaṇa texts begin the year with the full-moon day of the (Uttarā) Phālguna; the Sūtras mention another New Year's day, the *Chaitrī pūrṇāmāsī*, which falls one month later. It was in connexion with this dislocation of the year that the annual festivals might be postponed accordingly.[14]

The rules for the celebration of *Vassa* are contained in the third Khandhaka of the *Mahāvagga*.[15] No *bhikkhu* was to go on his travels till he had kept the *Vassa* during the earlier or later three months.[16] By the order of a king the retreat might

[16] *Ib.* p. 301.

be commenced at the later period.[1] A *bhikkhu* might leave his Vihāra, if sent for, but not for a longer period than seven days.[2] A number of other cases are given, such as a visit to a sick man or father, mother, or relation, where leave of absence was permissible, but was restricted to seven days.[3] The place of retreat could be changed for such reasons as danger from beasts of prey, snakes, robbers, demons, want of food, fire, no proper medicine, etc.[4] For those who entered upon *Vassa* in the later period, the end of the retreat fell on *Komudī* day, *i.e.* the full-moon day in the month Kārttika, frequently called 'Kaumuda day' in epic literature.

3. Pavāraṇā.—This solemn termination of the *Vassa* is inaugurated by an act of the *Saṅgha* in an assembly of the Chapter of at least five monks.[5] The fourteenth and fifteenth days of the half-month were appointed as *Pavāraṇā* days.[6] The ritual for the ceremony forms the fourth Khandhaka of the *Mahāvagga*.[7] Gautama says:

> 'I prescribe that the *bhikkhus*, when they have finished their *Vassa* residence, hold *Pavāraṇā* with each other in these three ways: by what has been seen, or by what has been heard, or by what is suspected. Hence it will result that you live in accord with each other, that you atone for the offences (you have committed), and that you keep the rules of discipline before your eyes.'[8]

The form for the ceremony is: 'I pronounce my *Pavāraṇā*, friends, before you, by what has been seen, or by what has been heard, or by what has been suspected; may you speak to me, sirs, out of compassion towards me: if I see (an offence), I will atone for it.'[9]

4. Kaṭhina.—Immediately after the *Pavāraṇā* there followed a distribution of robes, which believers offered to the fraternity, to the *bhikkhus* composing the *Saṅgha*. The ceremonies are detailed in the seventh Khandhaka of the *Mahāvagga*.[10] The distribution commences with the *Kaṭhinatthāra; atthāra*, 'spreading out,' not being here used literally, for spreading out on the ground or otherwise, but in a secondary, juristic sense. The term is translated according to context, sometimes by 'spreading out,' sometimes by 'ceremony,' and sometimes by 'dedication.'[11]

5. The seasons.—At the time of his ordination each priest received from the master of the ceremonies, *kammachāri*, five ordinances, the second being 'the seasons.' In ancient India the ritual year was divided into three four-monthly periods, the three terms being celebrated with sacrifices, on the full moon day of Phālguna, of Āṣāḍha, and of Kārttika; or, in each case, one month later, as described above. These three sacrificial festivals inaugurated summer, the rainy season, and winter. The Buddhists retained this division of the year, and celebrated the terms, but, of course, not with sacrificial rites. During the first period the priests were directed to reside at the roots of trees, to have the advantage of silent and profound meditation; during the second to keep *Vassa*; and during the third to occupy *paṇṇasālās* (huts of leaves and branches), for mutual instruction and for reading the *bhāṇa* to the people.[12]

6. Saṅgītas.—Convocations of priests were directed to be held frequently. The Pāli word is from a root which signifies 'to sing,' or 'to sound,' as Indians do when they read sacred books. From this it appears that the object of these assemblies was to read the *bhāṇa* to each other, but particularly to read and expound the *Vinaya* books.

LITERATURE.—This has been cited in the article.

J. H. BATESON.

FESTIVALS AND FASTS (Celtic). — **1. The division of the Celtic year.**—The division of the Celtic year and the position of its festivals were originally governed by agricultural processes. Probably at first the year was divided into two unequal parts, summer and winter. Later came the astronomical cycles—at first lunar (Plin. xvi. 95), then, as a result of the influence of the Roman calendar, solar. Two important facts must be borne in mind: (1) that, in Celtic belief, night preceded day, and that, in early Celtic literature, 'night' usually means a night and a day, with the result that every festival began on the previous night (Cæsar, *de Bell. Gall.* vi. 18; Loth, *RCel* xxv. 116); (2) that the year began with winter—probably about mid-November, though later the winter festival began on November eve. When we first become acquainted with the Celtic calendar from Irish texts, we find a two-fold division—each half being again subdivided. The winter half (*geimhredh*) began with November on Samhain eve, *i.e.* Oct. 31, and was subdivided into two parts, the second beginning on Feb. 1; the summer half (*samhradh*) began with May and the Beltane feast, and also had its subdivision, its second portion beginning with Lugnasad on Aug. 1 (O'Donovan, *Book of Rights*, Dublin, 1847, p. lii f.). There were thus four quarters, but these do not correspond to those beginning with the solstices and equinoxes. They begin each with a feast, three of which—Samhain, Beltane, and Lugnasad—can easily be traced. The February feast is now replaced by St. Bridget's day (Feb. 1): its pagan predecessor has left scant traces. It is unlikely that this definite subdivision existed in earlier times, as, indeed, the shifting of Samhain from mid- to 1st November suggests—in the Isle of Man it is still held on Nov. 12 (*FL* ii. [1891] 308)—and the arrangement is doubtless due to the analogy of the Roman calendar. But the influence of this calendar had the further effect of displacing some of the festivals. Thus, in Gaul, much of the ritual of Samhain was transferred to the calends of January, while there was a tendency to celebrate Midsummer day instead of Beltane as the summer feast, both being found with similar ritual over the Celtic area, and they are evidently twin halves of one festival. The influence of the Christian calendar, with its lists of feasts and saints' days, must also be taken into account, some of the ritual of the earlier pagan festivals now occurring as survivals on holy days within the range of the pagan festival periods. All these festivals being mainly connected with agriculture, magic as well as religion had its place in the ritual, the object of the magical acts being to promote fertility and to aid the power of the divinities or spirits of fertility.

2. Samhain (perhaps from *sam*, 'summer,' and *fuin*, 'sunset' or 'end' [Windisch-Stokes, *Ir. Texte*, Leipzig, 1880 ff., i. 757], though Stokes [*Urkelt. Sprachschatz*, Göttingen, 1894, p. 293] gives to **samani-* the meaning of 'assembly'), as a festival of the beginning of winter when blight and death were assuming their reign, naturally took account of that fact, and its ritual was intended to assist the powers of growth in their conflict with winter's death. But it had other aspects also, and a complete understanding of the festival can be arrived at only by studying early descriptions of the ritual or actual folk-survivals. With the growth of Celtic religion this feast seems to have gathered up into itself the ritual of certain lesser festivals. It is a festival of beginnings, like the New Year festivals of all primitive folk. Its ritual suggests also the festival of earlier pastoral times, when the flocks and herds were regarded as themselves divine animals. It is also a harvest festival, as is Lugnasad in August; and, though harvest would be over before mid-November, some of the ritual may have been transferred to that date, especially if it had been associated with threshing rather than with the harvest-field. With the coming of Christianity and the adoption of the Roman calendar, the ritual of the festival was once more scattered over the other sacred days in winter.

(1) As a festival of beginnings, some of the ritual had reference to that fact. All fires having been extinguished, new fire was brought from the sacred bonfire (Keating, *Hist.*, Lond. 1866, pp. 125, 300), itself kindled probably by friction. Possibly the blazing Yule-log brought to the hearth at Christmas was originally derived from the Samhain rites, by being dislocated from them as Christmas festivities became more prominent. Merriment and feasting characterize the festival in Ireland (Windisch-Stokes, i. 205; d'Arbois, ii. 5), and this may also be traced in the Scots Hallowe'en customs. In other words, it was an orgiastic feast; this is clearly seen from the licentious customs of the calends in Gaul, denounced by the Church over a long period. Such licence always characterizes a festival of beginnings, when the evils of the past year are being ritually got rid of by various means. Rites of divination, forecasting the lives of the inquirers during the coming year, were also in evidence. The most common rite was for each person to throw a stone into the bonfire which was kindled at Samhain. Its position next morning indicated the fate of its owner (Brand, *Pop. Ant.*, London, 1899, i. 390; *Stat. Acc.* xi. 621). Perhaps in earlier times this rite was a casting of lots to obtain a human victim, while the memory of the slaying was long after transformed into a presage of death or misfortune within the year. Other rites of divination, such as those described in Burns' *Hallowe'en*, had an erotic character (Hazlitt, *Dict. of Faiths and Folklore*, London, 1905, pp. 297 f., 340).

(2) The lack of fodder led to the slaughter of cattle at this time, or rather at a date corresponding with Martinmas, which points to the earlier date of the festival in mid-November. This slaughter, like that of the Scandinavian 'Blótmónath,' was sacrificial in character, and was followed by a feast on some of the animals. Within recent times in Ireland it was customary to offer one of the animals to St. Martin, the successor of some pagan animal-divinity in anthropomorphic form, and ill-luck followed the neglect of this rite (Curtin, *Tales of the Fairies*, Dublin, 1895, p. 72). This semi-religious slaughter dates back to the age when the animals were themselves divine. In this pastoral stage, perhaps associated with totemism, the annual slaying would be limited to one animal in each group; and, the animal being divine, the feast on its flesh was sacramental. If the slaughter had been more general from the first (as it certainly became in later times), it would be accompanied with rites intended to propitiate the divine animals, as in analogous cases elsewhere; but the festival would still be sacramental. The sacramental eating, the divinity of the animal, the gradual anthropomorphic tendency to give the animal-god a human form, and the transference of his personality to a later Christian saint, may be seen in the Irish legend of St. Martin (already associated with the slaying), which tells how he was cut up and eaten in the form of an ox (*RCel* vi. [1884] 254). Possibly the representation of the corn-spirit in animal form may have blended with the divinity of the animals slain at Samhain. Again, in Gaul, at the calends, as formerly at

Samhain, men wore the heads and skins of slaughtered animals in processions, doubtless in order to assimilate themselves further to the animal divinities by contact, as they had already done by eating. This custom was vigorously attacked by Church Councils and by individual preachers (see catena of passages in Chambers, *Mediæval Stage*, Oxford, 1903, App. N; *PL* xxxix. 2001). In certain recent survivals in the Hebrides a youth dressed in a cow's hide paraded the village and brought a blessing to each house where a person or animal inhaled the fumes of a piece of burning hide carried by him (Chambers, *Pop. Rhymes*, Edin. 1847, p. 297). This custom, which may have taken the place of the carrying of the slain animal in procession, resembles the rite of hunting the wren (see art. ANIMALS, in vol. i. p. 532[b]), which occurred at Christmas. But this, like the animal masquerades, may have been associated with Samhain in earlier times. Masquerading is still common among young people on Samhain in the Highlands, and in some parts of Britain dressing in animal disguise was associated with an autumn date (Hutchinson, *View of Northumberland*, Newcastle, 1778, ii. 45; Thomas, *RHR* xxxviii. [1898] 334).

(3) The agricultural aspect of the feast is seen first of all in the bonfire which was (and still is in Celtic and rural districts) lit on Samhain eve. The analogy of the Beltane and Midsummer fires shows that it was intended as a fire-charm to aid the power of the sun by virtue of mimetic magic, while, at the same time, this symbol was virtually the thing symbolized and conveyed its benefits. Hence the new fire was lit from the divine fire, blazing faggots were carried through the village, and the people jumped through the fire in order to be purified and strengthened by contact with the divinity. Numerous references show that various evil powers (perhaps blight and death), represented as demoniac beings or witches, were especially rampant on Samhain eve (*RCel* x. [1889] 214, 225, xxiv. [1903] 172; Joyce, *Soc. Hist. of Anc. Ireland*, 1903, ii. 556; O'Grady, *Silva Gadelica*, London, 1892, ii. 374; *Cymmrodor*. vi. 176), and one of these references shows that they were particularly hostile to the crops and animals. They may have been conceived as combating the powers of light and growth, which were thus assisted by the bonfire. There are also traces of a traditional belief that sacrifice was offered to them. In Welsh folklore the people rushed off as soon as the fire was extinguished, to escape from the 'black sow' who captured the hindmost—perhaps a reminiscence of sacrifice (Rhys, *Celtic Folklore*, Oxford, 1901, i. 225), and early Irish literature refers to the tax of the year's corn and milk, and of two-thirds of the children born within the year, to the evil Fomorians on Samhain eve. Keating (*Hist.* 300) also speaks of a sacrifice to the gods, burned in the fire on Samhain eve. But, though the powers of blight may have been propitiated, it is not unlikely that the primitive slaying of a human representative of the corn-spirit or of some divinity of growth was later conceived as such a propitiatory sacrifice. The process of thought is difficult to follow, but it may have seemed natural that, since the divine fire acted magically upon the life of the sun, it would act also upon the power of the god or spirit who was consumed in it in human form. By dying, the divine life was renewed and strengthened (see Frazer, *Adonis*, 1906, p. 100). At the same time we must not overlook the fact that the powers of growth may themselves have come to be regarded as evil in Christian times, just as the corn-spirit was sometimes given a formidable aspect. The 'black sow' in the Welsh instance may have been an earlier animal embodiment of the corn-spirit, which had come to be looked upon as more or less demoniac. At all events, the slaying of a human representative of the corn-spirit can hardly be kept apart from the victim slain at Samhain, more especially as harvest is late in several Celtic regions; while, to judge by folk-custom, the slaying was frequently connected with the threshing of the grain, rather than with the harvest-field (Mannhardt, *Myth. Forsch.*, Strassburg, 1884, p. 333 ff.). The slaying of the corn-spirit was probably derived from the similar slaying of the tree-spirit at the summer feast. The corn-spirit, like the latter, had also various embodiments—the last sheaf, an animal, or a human being; and all of these had powers both of quickening and of strengthening the fruits of the earth, cattle, and women, while there can be little doubt that part of the flesh was also eaten sacramentally (Mannhardt, 317 f.; Frazer, *GB*[2] ii. 288). Possibly, too, as the representative of the tree-spirit had once been a priest-king, so he who represented the corn-spirit may have been called a king also. This would account for the choosing of a mock-king, *e.g.* the king of the bean, at winter festivals (Hazlitt, 35; Chambers, *Book of Days*, Edin. 1863, i. 62). This and the presence of effigies of saints, which were carried in procession, their clothes distributed, and then finally burned (Chambers, ii. 492; Hazlitt, 131), form survivals, though somewhat apart from the date of Samhain, which are doubtless derived from the ritual of the corn-spirit, or perhaps that of the divine animal associated in earlier times with it. But, since the last sheaf representing the corn-spirit is usually called by some female name, 'the Maiden,' 'the Mother,' etc., this shows that the corn-spirit had originally been conceived as female—doubtless as a result of the fact that agricultural rites were first in the hands of women; while in survivals ultimately derived from Samhain rites a 'queen' or 'Yule's wife' is in evidence (Hazlitt, 97; Davies, *Mun. Records of York*, London, 1834, p. 270). With this we may also connect the fact that men disguised themselves as women at the calends. The increased power of the fairies—in Ireland the successors of gods of growth and fertility—on Samhain eve is easily explicable by the nature of the festivals, though they may have been sometimes confused with the demoniac powers. The vaguer corn-spirits doubtless became greater and more anthropomorphic divinities, and the slaying of one representative may have been changed to the slaughter of several victims, where death was also considered beneficial to vegetation. A similar evolution occurred in connexion with the vegetation spirit, while a holocaust of victims took the place of his representative. Doubtless among the rural people themselves the vaguer spirits and the older ritual still prevailed with little change. This substitution of several victims for one would account for the so-called sacrifice to the Fomorians, if they were aboriginal gods of fertility, and for the sacrificial cult of Cromm Cruaich, connected in one place with Samhain (see CELTS, V. 2). The gods of growth, evolved from these vaguer spirits, may well have been conceived as in conflict with powers of blight and death at this time, and this may have been ritually represented by a combat. The story of the battle of Magtured might then be regarded as based on a myth which told of this conflict, and which showed that, in spite of the apparent blight in Nature, the powers of growth could not be finally vanquished, but were victorious, like the Tuatha Dé Danann, at this battle.

(4) A yearly festival of the dead took place on Samhain eve at the beginning of winter, when the powers of growth were at their weakest, and when possibly a representative of the corn-spirit was slain. Hence this festival, like that of Lugna-

sad, may have been associated with the spirits of such victims. Or a festival associated with dying powers would easily become a feast of the dead generally, while the dead themselves were connected with the under-world god of fertility. In Scandinavia the dead have female spirit-guardians, *fylgjur*, identified with the *dísir*, also females, living in the hollow hills and apparently earth-goddesses. The Celtic analogy is found in the Matres, also earth-goddesses. Christmas Eve was called *Módraniht*, or 'Mothers' Night' (Bede, *de Temp. Rat.* 15); and, as many aspects of the winter festival were dislocated and transferred to Christmas and at the same time christianized, it is possible that Samhain eve had, in pagan times, been the Mothers' Night. Earth-goddesses probably preceded an earth-god, and hence they received the dead into their keeping before the Celtic Dispater did so. Thus the season of earth's decay was also the time at which her children, the dead, were commemorated (see EARTH). Samhain eve would thus correspond to the Scandinavian *Dísablót* held about this time—a festival of the dead and the *dísir* (Vigfusson-Powell, *Corp. Poet. Bor.*, Oxford, 1883, i. 419). This Celtic festival has left survivals in modern folk-custom. In Ireland all the dead come out of their graves and visit the houses, where a good fire is left for them (Curtin, *Tales*, 157; *FL* iv. [1893] 359). The same belief and custom obtain in Brittany (Le Braz, *La Légende de la mort* [2], Paris, 1902, ii. 115). Thus the festival of the dead brings us back to the hearth, and it is not unlikely that the Yule-log was originally associated with Samhain, when new fire was kindled on the hearth, and that the libations poured on it were intended for the dead. The place of the two Christian feasts of All Saints and All Souls on Nov. 1 and 2 (the time of Samhain) remains to be explained. The first, of earlier origin, was doubtless intended to supplant the pagan festival of the dead. As it failed to do so, a Christian feast of all the dead was then originated to neutralize existing pagan rites (Frazer, *Adonis*, 253 ff.). In this it only partially succeeded, but it is perhaps due to Christian influences that the more friendly aspect of the dead has been largely forgotten, and that they are associated in popular belief with demons, witches, etc., whose power is great on Samhain eve, and who are perhaps the representatives of the old power of blight and death.

3. **Beltane and Midsummer.**—These two festivals being twin halves of one early summer festival, the object of which was to promote fertility in field, fold, and house, the ritual acts of both may be considered together.

The word *Beltane* was already a puzzle to early Irish philologists, who explain it as meaning (1) *bil tene*, a goodly fire, or (2) *bel dine*, because the newly-born cattle (*dine*) were offered to a god Bel (Cormac, in Stokes, *Three Irish Glossaries*, London, 1862, p. 9, *s.v.* 'Bel, Beltaine'; *Arch. Rev.* i. [1888] 232; cf. Joyce, *Irish Names of Places* [4], Dublin, 1901, i. 278; *RCel* xxv. [1904] 86). The latter derivation is followed by those who connect a Celtic god Bel or Belus with a borrowed Semitic Baal. No such god is known, however, unless Belenos, Belisama, be connected with Beltane, as some suppose. D'Arbois (ii. 243) postulates a god of death, Beltene, deriving the word from **beltu*, 'to die,' and makes the festival his day. But no such god is known, and the feast was one of life and growth, not of death. Stokes (*Three Irish Glossaries*, xxxv.) divides the word into **Belt-aine*, while its root is perhaps the same as that of the Lith. *báltas*, 'white,' and the *-aine* is a termination as in *sechtmaine*, 'week.' In his *Urkelt. Sprachschatz*, 125, 164, he shows, however, that its primitive form was the composite **belo-te<p>nia*, from **belo-s*, 'clear' or 'shining,' the root of the divine name Belenos, and *te<p>nos*, 'fire' (O. Ir. *ten*). Hence *Beltane* would have some such meaning as 'bright fire.'

As at Samhain, the chief ritual act was the kindling of a bonfire by a spark from flint, or by friction from a rotating wheel (need-fire), frequently after the fires of the district had been extinguished. Cattle were driven through the fire or between two fires lit, as Cormac says, by Druids with incantations. By this means, viz. contact with the divine fire, they were preserved from disease. Survivals show that the festival was communal, since all the inhabitants contributed to the fire, while its religious side is seen in the fact that, within recent times, there was a service in church and a procession, and mayor and priest attended the fire. They represented the earlier local chief and pagan priest. The fire was sometimes lit round a tree, representing the vegetation spirit, or round a pole covered with greenery (the Maypole of later survivals); or a tree was cut and thrown into the fire (Hone, *Every-Day Book*, London, 1838, i. 849, ii. 595; Joyce, i. 216; *RCel* iv. [1879] 193). The people, probably clad in leaves in order to assimilate themselves to the vegetation spirit, danced sunwise round the fire to the accompaniment of songs or chants. The dance, imitating the course of the sun, probably was intended to assist it, for the livelier the dance the better would be the harvest. The fire being divine, the people crept through it to avoid disease and ill-luck, to ensure prosperity, or to remove barrenness. They ran through the fields with burning brands, or rolled blazing wheels over them, or sprinkled ashes from the fire upon them, or preserved charred brands till the following year. The tree itself was borne through the fields before being burned. The houses of the folk were decked with green boughs. All these rites had one end, viz. to ensure fertility through contact with the divine fire or the spirit of vegetation. As in the Samhain ceremonies, the fire represented and aided the sun; and, consequently, contact with the fire was equivalent to contact with the divine sun. Animals were sacrificed, probably as representatives of the spirit of vegetation or fertility. Among these was the horse, as is seen by Irish folk-survivals in which a horse's skull and bones were placed in the fire (Hone, ii. 595), or a man wearing a horse's head and representing all cattle rushed through the fire (Granger, *Worship of Romans*, London, 1895, p. 113 f.; for a legend of a speaking horse coming out of a mound at Midsummer eve and giving oracles, see Kennedy, *Legendary Fictions of the Irish Celts*, 1866, p. 135). Some of the flesh may have been eaten sacramentally, and some of it placed on the fields to fertilize them. In French Midsummer survivals, animals were burned, sometimes being enclosed in osier baskets (Bertrand, *Rel. des Gaulois*, Paris, 1897, p. 407; Gaidoz, *Esquisse de mythol. gauloise*, Paris, 1879, p. 21). Human victims seem also to have been burned in the fire, or otherwise slain. Thus, in a Perthshire survival, he who received a blackened portion of a cake, the pieces of which were drawn by lot, was called 'the Beltane carline' or 'devoted,' and a pretence was made of throwing him into the fire, and he was spoken of as dead (*Stat. Acc.* xi. 620); while in France he who stumbled in leaping through the fire was considered unlucky and devoted to the *fadets*, or spirits (Bertrand, 119). In earlier times such persons would be sacrificed. In other places gigantic effigies made of osier were carried in procession or burned (Mannhardt, *Baumkultus*, Berlin, 1875, pp. 514, 523).

Can the sacrifices to which these survivals bear witness be connected with the periodic Celtic sacrifices for fertility referred to by Cæsar, Strabo, and Diodorus, all perhaps borrowing from Posidonius, as Mannhardt (p. 532), followed by Frazer (*GB* [2] iii. 319), has suggested? Human victims or animals were enclosed in large osier images at a quinquennial or yearly festival and consumed by fire. The victims were criminals or prisoners of war, the former usually guilty of murder; and Strabo (iv. 4. 4) says that the greater the number of murders the greater was the fertility of the land, probably meaning that where there were many murders there would be a larger available number of criminal victims for the sacrifice. In the osier images and in the animal victims of late survivals, we may trace a connexion with these rites, while the enclosing of the victims in osier cages may be connected with the custom of decking a person in greenery at the summer festival. In this case the person is a

representative of the spirit of vegetation. The Celtic holocausts were in origin more than sacrificial; they had originated in the custom of slaying annually one man who was an incarnation of the vegetation-spirit. Originally this man had been a priest-king who had all the powers of the vegetation spirit, but in later times a surrogate took his place and was slain, though regarded for the time as a god. Gradually this slaying was looked upon as a sacrifice; hence it would naturally be thought that the benefits of the rite would be greater if the number of victims was increased. This would account for those great periodic holocausts, though elsewhere, as modern survivals show, the older rite must have continued as it was. The victim was burned in the fire—a sun-charm—and thus vegetation received beneficial effects from the victim himself and also from the fire in which he was consumed. At first the vegetation-spirit had been a tree-spirit which had power over growth, fertility, and fruitfulness (*GB*² i. 188 ff.). Hence a tree had a conspicuous place in the summer festival, and it had all the virtues of the spirit which it embodied. It was carried in procession, imparting these virtues to fields and houses; branches were placed over houses to obtain them by contact, the tree was burned as a method of slaying the spirit, or it was set up in the village for a year, so that its presence might bestow blessing, and was then burned at the next festival (Mannhardt, 177; *GB*² i. 203; Brand, *Pop. Ant.* i. 222 and *passim*; Hone, ii. 595). Among the Celts, with whom the oak was specially sacred, that tree may have been used in the ritual, since it, above all, represented the spirit of growth and vegetation. Here it is natural to connect the Druids' rite of culling the mistletoe with the burning of the sacred tree. Pliny (*HN* xvi. 249 ff.) says that it was cut on the sixth day of the moon, though he does not specify the time of the year; but magical plants, including mistletoe, are frequently gathered on Midsummer eve in order to be effective, and it is far from certain that he is reporting all that the rite betokened. It may well have been that the mistletoe (called in Gaelic *sugh an daraich*, 'sap of the oak') was culled because it was held to represent the life of the tree, which could not be cut down and burned till its life was secured, in accordance with a wide-spread belief that the soul or life of man or god can be placed outside himself for safety and that he will die if any one secures it (MacCulloch, *CF*, London, 1905, ch. 5). But, as survivals, in which a human effigy and a tree are burned together, show, a human representative of the vegetation-spirit was brought into close connexion with the tree and was also slain (Mannhardt, 315 ff.). The vegetation-spirit was given, now a theriomorphic, now an anthropomorphic form—hence it could be represented by beast or man, but in either case the tree itself remained as a constant factor in the ritual. Hence the doubling of the tree-spirit's incarnation. Thus the gathering of the mistletoe secured at once the life of the tree and that of the beast or man who was also slain. Possibly the oxen slain at the mistletoe rite may have been theriomorphic embodiments of the vegetation-spirit, though, as a rule, a human embodiment was found; but at this time human sacrifice had been prohibited in Gaul. Frazer has, therefore, suggested that the myth of Balder slain by the mistletoe was derived from actual ritual in which the mistletoe was plucked before the human incarnation of the vegetation-spirit could be slain (*GB*² iii. 345). Thus in the primitive Celtic summer ritual, the spirit or god of vegetation, the tree, and the animal or human victim were one; their life was in the mistletoe; they could not be slain until it was plucked. This done, they were burned in the fire which represented the sun, the visible power of life and growth. Hence both fire and slain god had a fertilizing power. Flames, smoke, burning brand, ashes, and pieces of the victim aided whatever they touched, purifying, strengthening, fertilizing. Hence people leapt through the fire, or passed their cattle through it, or believed that the fire or smoke fertilized their fields, or carried brands through them, or sprinkled them with ashes, or buried part of the victim in them, or preserved the brands in their houses. Probably part of the victim was eaten sacramentally—a rite to which Pliny may refer when he speaks of the Celtic belief that to eat human flesh was considered most wholesome (*HN* xxx. 1). The virtue of fire and victim was magico-sacramental. Through them, men, animals, and vegetation were brought into touch with the divine spirit. And in like manner fire and slain victim reacted beneficially upon the gods or spirits whom they represented, the fire upon the sun, the dying god upon the god who lived again. From such vegetation-spirits the greater Celtic gods of growth were probably evolved.

The blazing wheel, rolled down a slope or through the fields, imitated the progress of the sun, assisting it and also benefiting the crops. Such an imitation of the sun's motion is found in other rites, *e.g.* circumambulating house, cattle, or crops with fire in the direction of the sun (*deiseil*), with the same intention of benefit to them. Here, too, we see the origin of the common Celtic practice of walking *deiseil* round some object on any important occasion. Originating in the idea that to imitate the action of the sun is beneficial, it was held that to do so brought good luck and repelled evil influences. Thus in the Cúchulainn cycle, when Medb is setting out for the war, her charioteer makes her chariot describe a right-hand turn (*deiseil*) to repel evil omens (*Leabhar na hUidhre*, 55). In late survivals the *deiseil* action occurs in manifold forms. By a further process of thought, it was believed that the blazing wheel in its course carried off evils from the community, just as, in all probability, evils were laid on the slain divine representative (Hone, i. 846; Hazlitt, ii. 346), whether animal or human (see CIRCUMAMBULATION, PRAYER WHEELS).

Thus the two chief rites of the Beltane and Midsummer festivals, as also those of Samhain, were mutually complementary. The vegetation-spirit, slain as tree, animal, or man, died that he might live, and his flesh quickened the energies of earth and man. So, too, the blazing fire assisted the life of the powers of light and growth embodied in the sun, and in doing so aided both man and beast and the earth and vegetation. All these rites survived with little change into Christian times and were vigorously combated by the Church (d'Achéry, *Spicil.*, Paris, 1655–67, v. 216). Again, by associating the pagan Midsummer feast with the festival of St. John Baptist, or the pagan rites with the services and ritual of the Church, an attempt was made to modify their sheer paganism. But in neither case was it effectually stifled.

It was usual to roll 'Beltane cakes' down a slope—again in evident imitation of the sun's action; but in some cases the luck of the owner of the cake was denoted by its remaining whole or breaking—if it broke he would die within the year. Perhaps we may trace here an earlier selection of a victim by lot, as in the case of the lot by the blackened fragment of cake. In another survival, pieces of such a cake were given to unnamed friendly powers and to animals hostile to the flocks (Pennant, *Tour in Scotland*, London, 1774, i. 97). If this was done in the primitive pagan rite, there was a propitiation of beneficent and hostile powers—an example of the double outlook of all primitive religion. But probably in their earliest use the cakes were sacramental in character, and eaten by the folk, as in similar Teutonic instances (Grimm, *Teut. Myth.*, 1880–88, iii. 1239). As moisture was necessary for the growth of the crops, magical methods of obtaining it were in use at both the festivals. Sacred wells were visited, and rain charms performed with their waters. Hence such wells were deemed to be specially efficacious in other ways at these times, and people visited them for healing and other purposes (Hazlitt, i. 38, ii. 340; *New Stat. Acc.*, *Wigtown*, 1834–44, p. 208). The customs of bathing in May dew and bathing in a river at Midsummer were originally connected with the magical methods of producing moisture. There was also a dramatic representation of the conflict between the powers of growth and those of blight, or between summer and winter, with the victory of the former at this period. Traces of this ritual combat are found all over Europe, and notably so in the combat of the forces of the Queen of May with those of the Queen of Winter on Laa-Boaldyn (Beltane) in the Isle of Man (*GB*² ii. 99; Grimm, ii. 765; Moore, *Folk-lore of Isle of Man*, London, 1891, p. 112). These combats had doubtless the intention of aiding the actual powers of growth; and certain myths, *e.g.* that of the Tuatha Dé Danann vanquishing the Firbolgs on May-day, and, in Wales, that of the fight of Gwythur with Gwyn for the possession of Creidylad, probably were based upon the ritual. The presence of the May-king and May-queen in popular survivals, and the fact that their pagan predecessors were incarnations of male and female spirits of fertility or vegetation, suggest that the 'sacred marriage' was also part of the summer ritual. In world-wide agricultural rites the symbols or actual human representatives of these spirits or divinities were united temporarily, the object of the union being to promote the fertility of the soil through mimetic magic (*GB*² ii. 205). Probably a considerable amount of general sexual licence for the same magical end occurred at the same time.

4. Female cults of fertility.—At the winter and summer festivals a divine victim—the king-priest or his surrogate—was slain, in order to aid the processes of growth and fertility. But, as Celtic divinities and spirits were once mainly female, and as the processes of agriculture were once in the hands of women, the rites out of which these elaborate festivals sprang were doubtless also at one time confined to them. The divine victim would then be a female—the priestess or her surrogate—representing a female divine being.

Certain survivals point in this direction. The slaying of a female representative of the spirit is suggested in the name *cailleach bealtine*, 'Beltane carline' or 'old woman,' applied to the devoted person in the Highland survivals (see above, 840[b]). Though this person was a male, the name shows that in earlier times the victim was a woman. In winter festivals derived from Samhain, men masqueraded as women (Chambers, *Med. Stage*, ii. App. N); in local observances of St. Catherine's Day, Nov. 25, a 'queen' was chosen by girls; 'Yule's wife' as well as 'Yule' had her place at the Christmas pageants (Hazlitt, i. 97; Davies, *Mun. Rec. of York*, 270). Again, at the summer festival, the May-queen had frequently in survivals a more prominent place than the May-king. In both cases such 'queens' were the incarnations of a female spirit of fertility, an earth-goddess or vegetation-spirit, and were slain by the women who practised the cult. And if, as is probable, the witch orgies are remains of primitive female cults, the special activity of witches on Beltane eve, especially on hills which were formerly the site of worship (Grimm, iii. 1051), may also point in this direction. Later, gods took the place of goddesses, priests of priestesses, and male victims were accordingly slain. But sporadically the female cults probably still held their ground. This may explain some classical notices of female worship on Celtic ground. Strabo (iv. 4. 6) mentions sacrifices paid to native goddesses, whom he calls 'Demeter and Kore,' on an island near Britain. The cult resembled that of the chthonian goddess at Samothrace, *i.e.* it was a cult of fertility in which female divinities were worshipped. These divinities may still be represented in the sheaves of corn called the Old Woman and the Maiden, the corn-spirits of the past and the future year. The seed of the latter was mixed with next year's seed-corn, that the life of the goddess might pass into the seed sown (Frazer, *GB*[2] ii. 171 ff.). Probably the goddesses were once represented by actual personages, whose blood was used to fertilize the seed-corn. Such a rite may underlie Strabo's account of the Namnite women who worshipped Dionysus on an island at the mouth of the Loire, which no man might visit (iv. 4. 6). Yearly they unroofed the temple and the same day re-roofed it, each woman bearing a supply of materials; but she who dropped her load (and this always happened) was torn in pieces and her remains carried round the temple with wild cries. Dionysius Periegetes (v. 570) says the mysteries took place at night in honour of earth-goddesses, with a great clamour, and that the women were crowned with ivy. The whole reference is obscure, but it might be possible to connect it with rites of fertility, if the flesh of the victim was carried to the mainland and there used to fertilize the soil or the seed-corn. This assumes that she was slain as the incarnation of divinity. Perhaps Strabo was mistaken in saying that a god was worshipped; the cult may have been that of a goddess, as Dionysius reports. Another cult is reported by Pliny (xxii. 1) as occurring among the Britons. In it nude women stained with woad took part. This ritual, which may be connected with that of which the Lady Godiva procession is a survival (Hartland, *Science of Fairy Tales*, London, 1891, p. 84 ff.), is again suggestive of agricultural magic, in which nudity is essential to fertility. The same purpose is effected by dressing in foliage, thus effectively personating the spirit of vegetation, and this may explain why the Namnite women were crowned with ivy, and also why, as Diodorus reports (xxxi. 13 [ed. Dindorf, Paris, 1842, ii. 499]), sacrificial victims were crowned with leaves. The latter custom might be an extension of the more primitive one. Just as sporadically the cults of women held their ground, so earlier goddesses of fertility sometimes remained even after the divinities or spirits of fertility and growth, of corn and vegetation, had been conceived as male. The image of a goddess, called by St. Gregory of Tours Berecyntia (probably a native goddess [? Brigindu] assimilated to Cybele under this name), was borne through the fields and vineyards, on her festival and in time of scarcity, while the worshippers sang and danced before it (*PG* v. 1463; Greg. Tours, *de Glor. Conf.* 77; Sul. Sev. *Vita S. Mart.* 9). Such a lustration of the fields with an image in order to fertilize them is found in many regions (cf. the procession of the Germanic Nerthus [Tac. *Germ.* 40]), and we have already seen that the tree representing the vegetation-spirit was similarly borne through the fields, and probably the image has here replaced such a divine tree. The practice continued even among Celtic religious communities, either with the image of a saint or with his relics (Adamnan, *Vita Columb.* ii. 45). The washing of the image after the lustration—probably as a rain-charm—is not referred to in the local Gaulish instance, but was commonly used elsewhere; hence it may be assumed that it occurred, since on Celtic ground the washing of images of saints for that purpose frequently took place.

5. **Lugnasad.**—The first day of August, or more probably in earlier times some day in mid-August, occurring midway between Beltane and Samhain, was observed as a festival. It began the autumn or harvest-season, and was probably itself a harvest festival associated with the offering of firstfruits, though it is doubtful whether, in Britain and Ireland at least, the harvest would be ingathered by August 1. This points to mid-August as the earlier date of the festival, while, as we have seen, part of the ritual of the harvest festival passed to the Samhain feast. One name of the day, *Brón Trogain*, is explained as 'the earth is afflicted *or* under fruit,' *Trogan* being a name for the earth ('Wooing of Emer,' *Arch. Rev.* i. 232; O'Donovan, liii.). The day was dedicated among the Celts, as the corresponding Lammas among the Anglo-Saxons, to a sacrifice of the fruits of the soil (Vallancey, quoted by Hone, i. 1063). But the day was associated with the god Lug; hence its Irish name, *Lúgnasad*, in Scots Gaelic *Lùnasdal*, in Manx *Laa-Lhuanys*. Cormac (p. 99) explains Lugnasad as 'a festival or game of Lug mac Eithlenn, which was celebrated by him in the beginning of autumn.' But the Rennes Dindsenchas (*RCel* xvi. [1895] 51) says that Lug's foster-mother Tailtiu was buried on that day, and that Lug directed an assembly and games to be convened then as a yearly memorial of her at her grave-mound. This may be a later explanation of the slaying of the corn-spirit in a human representative. In primitive times, when agriculture was in the hands of women, the victim would be a female, later euhemerized as Tailtiu, perhaps herself at one time regarded as the corn-goddess evolved from an earlier corn-spirit. In other parts of Ireland, as at Carman in Leinster, the festival was associated with the death of a woman Carman who had evil designs upon the corn of the Tuatha Dé Danann, but a variant made it commemorative of the death of a king, Carman (*RCel* xv. [1894] 313 f.). This may suggest different conceptions of the personality of the corn-divinity, now a goddess, now a god, the one having female, the other male representatives; while, in the case of the god, the male victim may have been regarded as a king, on the analogy of the representative of the spirit of vegetation. When the festival, as at Tailtiu, was further associated with Lug, it would be easy to

connect the goddess Tailtiu with the god, in the relation of foster-mother, as the euhemerized myth sets forth. The association of Lug, probably a sun-god, with the festival is also suggestive of the victory of the powers of light and growth over those of blight, as evidenced by a plentiful harvest. The people rejoiced in presence of the victorious god. Bonfires may have been lit in honour or in aid of the sun-god, and the magical cult of the waters was also in evidence. Cattle were swum through a pool or river so that they might live through the year, and in recent times in the Isle of Man bottles were filled with the water of sacred wells (Vallancey, quoted by Hazlitt, ii. 340; Rhys, *Celtic Heathendom*, London, 1888, p. 422). Besides this agricultural aspect, the local assemblies at Lugnasad had also their social side. These assemblies were fairs at which horse-races took place—Lug being the introducer of such races (*Leabhar Laignech*, 10, 2)—while marriages were also arranged. Men may have been more inclined to enter upon wedlock when their garners promised to be full. But it is also possible that behind this lies an earlier promiscuous love-making as a result of the frenzied festival gladness, or with the object of magically assisting the fruitfulness of the soil. Possibly, too, the rite of the divine marriage was also a part of the festival proceedings. At all events there are hints that it was connected with Lug's marriage, though the texts explain this as his 'wedding the kingship' on the occasion of his being made king after the battle of Magtured (Rhys, 414)—a phrase which may be an allegorical method of stating what was ritually enacted, viz. the wedding of the divine king, the incarnation of Lug, who received the kingdom by virtue of his marriage with a daughter of the royal house, in accordance with the laws of female succession or the matriarchate. In another text this allegorical interpretation is more plainly seen, for here the kingdom or sovereignty of Erin belongs to an actual though mysterious queen who is found in a magic palace with Lug (O'Curry, *MS Mat.*, Dublin, 1861, p. 618). For this reason Rhys explains *nasad*, not as Cormac = 'festival,' but as 'a wedding,' the word perhaps having the same origin as Lat. *nexus* (*op. cit.* 415). The proper observance of Lugnasad, like that of the festival at Carman held on the same day, though not apparently in connexion with Lug, produced plenty of milk, grain, and fruit, as well as general prosperity and freedom from disease; but evil certainly followed any neglect of it. We cannot doubt that the seed of the last sheaf, representative of the corn-spirit, was preserved to mix with the next year's grain, in order to increase its fertility by contact with the divine cereal, while the cattle were made to eat straw for the same purpose; or that the human incarnation of the corn-spirit was slain, and his blood or flesh mixed with the grain for the same purpose, or eaten by the worshippers. To neglect this rite would cause a less bountiful harvest, and from this thought may have sprung the wider ideas about observance or neglect of the festival itself. Though Tailtiu is mentioned as the place where 'all Ireland' met to celebrate the feast, this is certainly an exaggerated way of describing many such central gatherings, since we know of others held, *e.g.*, at Carman and Cruachan. Probably the gathering of 'all Gaul' at Lugudunum, 'town of Lugus' (Lyons), may be similarly explained. In this case the gathering on August 1, originally in honour of Lugus and of the same nature as the insular Celtic Lugnasad, was held in honour of Augustus, and was called, after his name, the Feast of Augustus. This still survives in Welsh *Gwyl Awst*, the August, or, more probably, the Augustus festival, proving that the romanizing of the native feast had spread to Britain. Similarly the christianizing of the pagan offering of first-fruits has issued in the Lammas customs. But relics of the earlier pagan rites still mark the modern observance of the day.

6. These greater periodic Celtic festivals may be regarded as the final development of village rituals for fertility at certain times throughout the year, which were more or less liable to variation. The festivals concerned the anthropomorphic divinities of growth, and were apparently held as central gatherings. But side by side with them the older village rituals may have continued. How far the folk associated the latter with such anthropomorphic divinities is unknown, but they may simply have concerned themselves with the cult of the older spirits of fertility, of vegetation, of the corn. In any case, no strict line can be drawn between the festivals and the village rituals. Their central purpose was the same, though the festivals may have extended their scope; and what we know of the ritual of the festivals constantly recalls that of popular survivals of the village cults. The ruder aspects of such rituals have been held to be pre-Celtic in origin (Gomme, *Ethnology in Folklore*, London, 1892, p. 30 ff.). That the pre-Celtic peoples had such cults cannot be doubted, but everything goes to show that Celtic institutions had emerged out of a savage past, that much in the ritual of the Celts was rude and cruel, and that, if they accepted aboriginal cults, it was only because such cults were already familiar to themselves.

FESTIVALS AND FASTS (Chinese).—The Chinese work *Ts'ing-Kwei*, 'Regulations of the Priesthood,' contains instructions for the observance of all festivals and fasts throughout the year. They are [Jan. 1912] as follows:

1. **National.**—(1) The Emperor's birthday. The festival commences three days before and continues for three days after. It is called *Sheng-tsie*, 'sacred festival.' (2) The Empress's birthday. (3) The day of receiving an Imperial message at a monastery. (4) Four monthly feasts—at the new, and full moon, the 8th, and the 23rd days of the month. They are called *Kin-ming si-chai*, 'the four feasts illustriously decreed.' (5) Anniversaries of Emperors' deaths, of the present dynasty only.

2. **Celestial beings.**—(1) Day of worshipping Devas. The authority for the observances rests on *Kin-Kwang-ming-king*, 'the bright sūtra of golden light.' (2) Eclipses of sun and moon, the celestial bodies being addressed, in the services, as Bodhisattvas (*q.v.*), and the power of Buddha evoked to deliver them. (3) Sacrifice to the moon on the 15th day of the 8th month, this being the moon's birthday. (4) Prayer for fine weather, to various Buddhas. (5) Prayer to Wei-to, protector of the Buddhist religion. If supplies at the monasteries fail, Wei-to is appealed to to replenish them. (6) Birthday of Wei-to, on the 3rd (or 13th) day of the 6th month. (7) Birthdays of the divine protectors of monasteries: (*a*) *Hwa-kwang*, on the 28th day of the 9th month; (*b*) *Lung-wang*, 'dragon-king'; (*c*) *Kwan-ti*, 'god of war,' on the 13th day of the 5th month, though the 24th day of the 6th month is the date in the national annals. (8) Birthdays of the kitchen-god, on the 24th day of the 6th month, the 3rd of the 8th, and the 24th of the 12th.

3. Buddhas and Bodhisattvas.—(1) Birthday of Mi-li Fo (Maitreya Buddha), 1st day of 1st month. (2) Anniversary of Śākyamuni's entrance into Nirvāṇa, 15th day of 2nd month. (3) Birthday of 'Kwan-shï yin p'u-sa,' or Avalokiteśvara (*q.v.*), 19th day of 2nd month. (4) Birthday of 'P'u-hien p'u-sa,' or Samantabhadra, a fictitious Buddha of northern Buddhism, 21st day of 2nd month. (5) Birthday of the female Buddha, Chun-ti, 6th day of the 3rd month. (6) Birthday of 'Wen-shu p'u sa,' or Mañjuśrī Bodhisattva, 4th day of the 4th month. (7) Birthday of Sākyamuni, 8th day of the 4th month. (8) Birthday of 'Ta-shï-chï p'u-sa,' 1st day of the 7th month. This Bodhisattva, with Kwan-yin and Amitābha, are 'the three sages of the West.' (9) Birthday of Ti-tsang p'u-sa, 30th day of the 7th month. (10) Birthday of Yo-shï Fo (the Buddha who instructs in healing), or Bhaiṣajyaguru Buddha, 30th day of the 9th month. (11) Birthday of O-mi-to Fo, or Amida, Amitābha Buddha, 17th day of the 11th month. (12) Anniversary of elevation of Śākyamuni to the rank of Buddha, 8th day of 12th month.

4. Characters in Chinese Buddhist history.—(1) Death of Pochang, 19th day of 1st month. (2) Death of Hwei-yuen, a founder of the Tsing-tu school, 6th day of 8th month. (3) Death of Tau-siuen, a founder of the discipline school, 3rd day of 10th month. (4) Anniversary of death of Bodhidharma (Ta-mo), the first of the six patriarchs, 5th day of 10th month. (5) Death of Hien-shen, founder of the school bearing his name, 14th day of 11th month. (6) Death of Chi-k'ai, founder of the T'ien-t'ai School, 24th day of 11th month.

5. Supplemental anniversaries.—(1) First day of the year, special worship. (2) End of winter, Kiai-tung, 15th day of 1st month. (3) Birthday of Sakra, 9th day of 1st month. (4) Birthday of Yo-wang p'u-sa, medical king and Bodhisattva, 15th day of the 4th month. (5) Commencement of summer, 16th day of 4th month. (6) Yü-lan-p'en, ceremony for feeding hungry ghosts, 15th day of 7th month. (7) End of summer, 16th day of 7th month. (8) Birthday of the Bodhisattva Lung-shu, or 'Dragon-tree,' 25th day of the 7th month. (9) Birthday of the ancient Buddha Jan-teng, 'Light Lamp' (Dīpaṃkara Buddha), whose disciple, in a former *kalpa*, Sākyamuni was, 22nd day of 8th month. (10) Commencement of winter (Li-tung), 15th day of 10th month. (11) Birthday of the Bodhisattva Hwa-yen, 29th day of the 12th month. (12) Winter solstice; special worship.

In this popular calendar, the *Ts'ing-Kwei*, no mention is made of anything astronomical. The Buddhists have arranged their calendar of festivals and fasts to suit the Chinese months[1] (see CALENDAR [Chinese]).

J. H. BATESON.

FESTIVALS AND FASTS (Christian).—I. **Days of weekly observance.**—The week of seven days was taken over by Christians from the Jewish Church with a change in the sacred day—the first, the day hallowed by Christ's resurrection, occupying the place of the seventh.

(*a*) The observance of *the first day of the week*, as the day when Christians met together specially for 'the breaking of the bread,' is already noted in the NT (Jn $20^{19.26}$, Ac 20^7, 1 Co 16^2). In the *Epistle of Barnabas* (end of 1st cent.) the words occur (ch. 15): 'We keep the eighth day for rejoicing, in which also Jesus rose from the dead.' The *Didache* (early in 2nd cent.) contains the passage (ch. 14): 'On the Lord's own day (κατὰ κυριακὴν δὲ Κυρίου) gather yourselves together and break bread and give thanks.' Ignatius in his *Ep. to the Magnesians* (same period) speaks (ch. ix.) of those who had been converted from Judaism as 'no longer observing Sabbaths, but fashioning their lives after the Lord's Day, on which our life (he says) also rose through Him.' The latter passages seem to fix the meaning of 'the Lord's day' (ἡ κυριακὴ ἡμέρα) in Rev 1^{10}. Justin Martyr's description of the worship of Christians on the 'day of the sun' is well known (*Apol.* i. 67).

(*b*) From very early times *Wednesdays and Fridays* were observed by Christians as half-fasts—*semijejunia* (Tert. *de Jejun.* 13), so called because they were not prolonged beyond the ninth hour, *i.e.* the middle of the afternoon. They are mentioned in the *Didache* (ch. 8): 'Let not your fasts be with the hypocrites, for they fast on the second and fifth day of the week, but ye shall fast on the fourth day and on the Preparation' (παρασκευή, see Mk 15^{42}). The allusion is to the Jewish weekly fasts referred to in Lk 18^{12}. In the *Shepherd* of Hermas (1st half of 2nd cent.) (*Simil.* v. 1) the author speaks of himself as fasting and holding a 'station.' This word, which is explained by Tertullian (*de Orat.* 19) as a military term implying that Christians were then specially on guard, is his name for the two weekly fasts (*de Jejun.* 2 and 14). Clem. Alex. (*Strom.* vii. [*PG* ix. 504]) also mentions these fasts, but without using the word 'station.' The fasts of Wednesday and Friday are still continued in the East; in the West, Friday alone, as a rule, is so observed. These days were also marked by assemblies for worship (*synaxes*). In Africa at the end of the 2nd cent. the Eucharist was celebrated as on Sundays (Tert. *de Orat.* 19); and this was also the case in Jerusalem, except during Lent, in the 4th cent. (Etheria, *Peregrin.* iv. 3); but at Alexandria (Socrates, *HE* v. 22) and at Rome (Innocent I., *Ep. ad Decent.* 4 [*PL* xx. 556]) at this latter date the service was non-liturgical.

(*c*) There was a tendency at first, as might be expected, among Christians of Jewish race to continue the observance of *Saturday* (the Sabbath); but this practice came to be regarded as a mark of Judaizing (Col 2^{16}; Ignat. *ad Magn.* ix., *Ep. to Diognetus*, 4 [*c.* 150]). We do not hear again of any observance of Saturday until the 4th century. It then in the East had become a day of worship, generally eucharistic, and bore a festal character, fasting being forbidden on it, except on Easter Even (Counc. of Laod. 16 and 49 [Mansi, ii. 567, 571]; *Apost. Const.* v. 14, 20, vii. 23 [ed. Funk]; Basil, *Ep.* 93 [*PG* xxxii. 483]). In the West, on the contrary, except at Milan, Saturday became a day of fasting and was non-liturgical (Aug. *Ep.* xxxvi., liv. [*PL* xxxiii. 137, 201]). Probably the Saturday fast originated in the custom, which arose as early as the time of Tertullian, of occasionally prolonging the Friday fast to the following day. This practice is called by him 'continuare jejunium' (*de Jejun.* 14); subsequently the word *superponere*, regarded as a literal tr. of ὑπερτίθεσθαι, was applied to it (Victorinus, *de Fab. Mundi* [end of 3rd cent.; *PL* v. 304, 306]; Counc. of Elvira [324], canons 23 and 26 [Mansi, ii. 9, 10]).

2. Lent and Easter.—Our Lord's death and resurrection took place about the time of the Passover. It was inevitable, therefore, that the Apostles, who were Hebrews, and their converts, who at the first were of the same race, should attach a new Christian significance to the ancient festival. There seems to be an intimation of this in 1 Co. The letter was written after a winter, yet before

[1] J. Edkins, *Chinese Buddhism*, London, 1880, pp. 205, 212.

Pentecost ($16^{5.8}$), therefore about the Passover season; and in it (5^7) St. Paul speaks of Christ as our 'Pascha [here = Paschal victim] which hath been sacrificed.' It is on the occasion of the early dispute about the time of its celebration that we have the first historical notice of the Christian Pascha. Polycrates, Bishop of Ephesus, and Irenæus, Bishop of Lyons, in their letters to Victor of Rome (last decade of 2nd cent.) trace the Quartodeciman custom of proconsular Asia back to Polycarp († 155), who claimed for it the authority of St. John. The custom of Rome is traced by Irenæus up to Bishop Xystus (*c.* 120), further than whom apparently the tradition did not go (Euseb. *HE* v. 24).

3. Lent.—(*a*) Easter never stood alone; it came as a day of rejoicing after a fast which commemorated the death and burial of Christ. The word 'Pascha' for the first three centuries signified not Easter, but Good Friday (Tert. *adv. Jud.* 10; *de Bapt.* 19); and this meaning was supported by a singular notion that it was derived from πάσχω (Iren. iv. 10 [*PG* vii. 1000]; Lact. iv. 26 [*PL* vi. 531]). The fast, to which at first more importance was attached than to the festival which followed, was not of long duration. Irenæus, in his letter to Victor (mentioned above, 2), alludes to different usages as prevailing in his time, and long before (πολὺ πρότερον). 'Some think,' he writes, 'they ought to fast one day, others two, others even more: others reckon the period as 40 hours day and night.' The 40 hours may be illustrated by passages from Tertullian (*de Jejun.* 2, 13 [*PL* ii. 1006, 1023]), in which he speaks of the custom of fasting during the days 'when the bridegroom is taken away' (Mt 9^{15}), *i.e.* the period from Good Friday evening to Easter morning. In Alexandria, in the middle of the 3rd cent., we are informed that some fasted during the whole week before Easter Day, others for shorter periods, and that the fasting varied in degree of rigour (Dion. Alex. *Letter to Basilides*, in Feltoe, *Dionysius of Alexandria*, Cambridge, 1904, p. 101 f.).

(*b*) The mention of a Lent of forty days (Quadragesima, τεσσαρακοστή) first occurs in the fifth canon of the Council of Nicæa (325) (Mansi, ii. 669); and, the reference being only a note of time (πρὸ τῆς τεσσαρακοστῆς), a well-established custom is implied. The period from henceforth is frequently mentioned as a time of preparation of catechumens for baptism, for the discipline of penitents, and generally of spiritual retreat for Christians. Such exercises naturally involved fasting; but the practice varied in different countries. See, further, FASTING (Christian), II. 2.

4. Holy Week (*Major* or *sancta Hebdomas*, ἡ ἑβδομὰς μεγάλη or ἁγία).—(*a*) *Palm Sunday* (*Dominica in Palmis*, ἡ κυριακὴ τῶν βαΐων).—The procession of palm-bearers in memory of Christ's triumphal entry into Jerusalem six days before His passion, from which the title of this Sunday is derived, took its origin in Jerusalem. Etheria (*Peregrinatio*)[1] relates how the whole Christian community there went on the evening of this day to the Mount of Olives, where a religious service was held, and thence returned home in procession carrying branches of palm or olive and singing, 'Blessed is he that cometh in the name of the Lord.' The ceremony was not introduced into the West until much later. Isidore of Seville (early in 7th cent.) is acquainted with the name 'Dies palmarum,' but not with the procession (*de Offic. Eccl.* i. 28 [*PL* lxxxiii. 763]). The *Gelasian* and *Gregorian Sacramentaries* also have the name; but no service for the blessing of palms or for the procession is mentioned until the second half of the 9th cent. (Amalarius, *de Off.* i. 10 [*PL* cv. 1008]).

At an earlier period a rite of general observance on Palm Sunday was the 'traditio symboli,' the imparting to the catechumens who had been under instruction during Lent of the words of the Creed for the first time. This ceremony formed the chief characteristic of the Sunday next before Easter in service-books in which the name Palm Sunday is unknown. Thus in the *Sacramentarium Gallicanum* and the *Missale Gothicum* (ed. Muratori) the service for the day is called 'Missa in Symboli Traditione.'

(*b*) *Maundy Thursday* (*Feria v. in cœna Domini*, ἡ ἁγία καὶ μεγάλη πεμπτή).—Our Lord's institution of the Eucharist on the day before He suffered is commemorated in the liturgical epistle taken from 1 Co 11, in all the Western Service-books and in the Greek rite.[1] In Africa on this day the Eucharist was partaken of after the evening meal, contrary to the usual requirement of fasting communion, in order to reproduce the circumstances of the institution. The 3rd Council of Carthage (397), can. 29, exempts even the celebrant on this one occasion from the rule of fasting: 'Ut sacramenta altaris non nisi a jejunis hominibus celebrentur, excepto uno die anniversario quo coena Domini celebratur' (Mansi, iii. 885). St. Augustine (*Ep.* liv. 7 *ad Januar.* [*PL* xxxiii. 204]) refers to the practice, and gives as an additional reason for it the custom of bathing on this day in preparation for Easter, which he deemed incompatible with fasting: 'quia jejunia simul et lavacra tolerare non possunt.' The Trullan Council (680), can. 29, expressly cancelled the exception allowed by the Council of Carthage, and made the rule of fasting communion absolute (Mansi, xi. 956).

Other features of this day were the reconciliation of penitents (Innocent I., *Ep. ad Decent.* 7 [*PL* xx. 559]), and the consecration of the holy oils for baptism, confirmation, and the unction of the sick (Isidore of Seville, *de Off.* i. 29 [*PL* lxxxiii. 764]). The latter rite is still retained in the Latin Church. The feet-washing of inferiors by superiors which, being known as the 'mandatum,' gave its name to 'Maundy' Thursday, seems to be first mentioned in a canon of the 17th Council of Toledo (694) (Mansi, xii. 98), which complains that it was neglected in some places, and for the future enforces the observance on all bishops and priests. The name is taken from the anthem sung during the ceremony, 'Novum mandatum do vobis' (Jn 13^{34}). See FEET-WASHING.

(*c*) *Good Friday* (*Feria vi. in Parasceues*, ἡ ἁγία καὶ μεγάλη παρασκευή or ἡ ἡμέρα τοῦ σταυροῦ or ἡ σωτηρία).—The anniversary of our Lord's death is the only day in the year when by general custom the Eucharist is not celebrated—a custom which was formerly extended to Easter Eve (Innocent I., *Ep. ad. Decent.* 4 [*PL* xx. 556]), as it is still in the Eastern Church. The first part of the service for Good Friday in the Roman Missal—consisting of lessons from Holy Scripture and Collects, followed by a series of intercessory prayers—probably preserves the type of worship originally used in the West on non-liturgical days (Duchesne, *Christian Worship*, 172, 248). At a later date (7th or 8th

[1] The *Peregrinatio Etheriae* is a MS discovered by I. F. Gamurrini at Arezzo, and published by him in 1887. It is an account of a pilgrimage to Jerusalem, addressed by a Spanish nun to her sisters in religion. Her name was at first wrongly supposed to be Silvia (see Duchesne, *Christian Worship*[4], p. 490). An ed. of the *Peregrinatio*, with an Eng. tr. by Bishop Bernard, is published in the Palestine Pilgrims' Text Society London, 1891. The portions relating to the order of church offices at Jerusalem with a tr. are given in Duchesne, Eng. ed.

[1] In the calendar of Polemius Silvius (448) (*PL* xiii. 676) the 24th March is marked as 'Natalis calicis,' the birthday of the chalice. This is in accordance with an early belief that the 25th March was the day of Christ's death, and the 27th of His resurrection. The festival seems to have been generally observed in Gaul, as we have fragments of sermons preached on the occasion by Avitus of Vienne (*c.* 518) (*PL* lix. 302, 306, 308, 321), and it is mentioned by Eligius of Noyon (*c.* 640–650) (hom. 10 [*PL* lxxxvii. 628]).

cent.) this service was elaborated by the introduction of the ceremonies of the Adoration of the Cross and the Mass of the Presanctified. The former appears in the *Gelasian Sacramentary* and in the *Ordines Romani* dating from the 9th cent. (ed. Mabillon in *Museum Italicum*, reprinted *PL* lxxviii.). It is omitted in the *Gregorian Sacram.*, probably because this book gives only the prayers said by the Pope (Duchesne, 248 n.). It came to the West from Jerusalem, where on this day, in the 4th cent., the true cross, discovered, as alleged, by the Empress Helena, was brought out to be kissed by the faithful (Etheria, *Peregrinatio*). The Mass of the Presanctified is the communion of the priest, and formerly of the people also, with the Sacrament consecrated on the previous day. The rite was borrowed from the East, where, on days on which the Eucharist was not permitted to be celebrated, the *Liturgy of the Presanctified*, ἡ τῶν προηγιασμένων λειτουργία, was appointed in its place. The rule in relation to Lent is laid down by the Trullan Council (692), can. 52 (Mansi, xi. 968) (see Neale, *Gen. Introd.* 714 ff.; Allatius, 1531 ff.). The Devotion of the Three Hours, so popular in modern times in the Roman and Anglican Communions, dates only from 1687, when it was introduced in Peru by the Jesuit Alonso Messia (Thurston, *The Devotion of the Three Hours Agony, translated from the Spanish Original*, London, 1899). The name 'Good Friday' is peculiar to the Church of England. Elsewhere in the West the day is popularly known as 'Holy Friday.'

(*d*) *Easter Even* (*Sabbatum sanctum*, τὸ μέγα or τὸ ἅγιον σάββατον).—This is the only Saturday in the year which is kept as a fast in the Eastern Church. For this day no services were appointed in the Latin rite. The office of the Vigil of Easter, held before the dawn of Easter Day, was in the 7th cent. (see *Gelasian Sacram.*) transferred to the afternoon of Saturday, and later on to the morning. Thus the English name is in accord with the ritual aspect of the day. The vigil service proper —consisting of a long series of lessons, chants, and prayers—was followed by the blessing of the font, and the baptism and confirmation of the catechumens. The function was concluded by the Mass, which originally was celebrated at the first signs of dawn. Two other ceremonies were prefixed later on to the vigil service—the blessing of the new fire and of the Paschal candle. The new fire probably took rise from a pagan custom to which, when adopted by Christians, a gospel symbolism was attached. The first notice we have of it is connected with Ireland in the legendary history of St. Patrick (Stokes, *Tripartite Life of St. Patrick*, 1887, p. 278). The custom seems to have been carried to the Continent by Irish missionaries. The mode of lighting it was unknown at Rome in the 8th century (Pope Zacharias [741–752], *Ep.* 13 *ad Bonifacium* [*PL* lxxxix. 951]). The fire, which, according to the rubric, must be produced from flint and steel, is used to kindle the lights throughout the church. In the East, the holy fire is peculiar to the Holy Sepulchre at Jerusalem, and cannot be traced farther back than the 9th century. It has been conjectured that it was introduced by the Latin monks stationed there by Charlemagne, 799–801 (Wordsworth, *Ministry of Grace*[2], London, 1903, p. 384 f., and App. E, p. 462 ff.). The blessing of the Paschal candle was an ancient custom in the countries of the Gallican rite, and perhaps in Africa. It seems to be mentioned by St. Augustine († 430), who quotes verses which he had composed 'in laude quadam Cerei' (*de Civ. Dei*, xv. 22 [*PL* xli. 467]). Two forms of blessing are found in the *Opuscula* (9, 10) of Ennodius of Pavia (521) (*PL* lxiii. 258, 262). Pope Gregory I. († 604) writes of the 'preces quae super Cereum in Ravennati civitate dici solent' (*Ep.* xi. 33 [*PL* lxxvii. 1146]). The 4th Council of Toledo (633) refers (can. 9) to the observance of the ceremony in Spain and in many other parts of the world, and directs that it shall be maintained in the churches of Gaul (Mansi, x. 620). It has a place in the three *Gallican Sacramentaries* (ed. Muratori), and in Alcuin's supplement to the *Gregorian*. It is also in the *Gelasian*, but obviously inserted there (Wilson, xxvii.). Although not adopted at Rome until much later, the *Liber Pontificalis* (ed. Duchesne, i. 225) states that it was permitted in the churches of the suburbicarian diocese as early as the time of Pope Zosimus († 418). The service was read from rolls exquisitely written and illuminated, many of which, dating from the 10th to the 12th centuries, are still preserved. They are called 'exultets,' from the first words, 'Exultet iam angelica turba cælorum!' At the blessing of the font, the Paschal candle is plunged into the water during a prayer for the descent of the Holy Spirit. It is lighted at every service from Easter to Pentecost.

5. **Easter.**—(*a*) *Easter Day* (*Dominica Resurrectionis*, ἡ ἑορτὴ πασχάλιος, τὸ πάσχα, or ἡ μεγάλη κυριακή).—This, the chief festival of the Christian Church, was not at first distinguished by any special rite from other Sundays. So late as the 6th cent. it was ordained by Pope Vigilius (537–555) that the Mass on Easter Day should differ from that on other days only by the addition of suitable Scripture lessons (*Ep. ad Euther.* 5 [Mansi, ix. 32]). At Rome on this day the custom of communion in both kinds was retained until near the end of the 14th century (*Ordo Rom.* xv. [of Amelius, *c.* 1378–1398] ch. 85, ed. Mabillon, *Mus. Ital.* ii. 505 f.). A Western mediæval rite, which lasted up to the 12th cent., was the blessing of the flesh of a Paschal lamb (*Ordo Rom.* xi. [1143], Mabillon, p. 142; Bona, *Rerum Lit.*, Rome, 1671, iii. 185 ff.). A form of blessing is given in the Missal of Robert of Jumièges, 11th cent., p. 103 (H. Bradshaw Soc.). Another rite, still finding place in the Latin Service-book, formed a conclusion to the ritual of Good Friday. On that day, after the Adoration of the Cross, the cross itself with the reserved Sacrament was placed in the 'sepulchre,' a recess generally situated on the north side of the sanctuary. Before Matins on Easter Day the Host was ceremonially taken from the sepulchre and laid upon the altar, while the antiphon, 'Christ, rising from the dead, dieth no more,' with its response, was sung. This was the source of the special anthems prefixed to the proper Psalms for the day in the Eng. Prayer Book. The English name 'Easter' is probably derived from *Eostre*, an Anglo-Saxon goddess, to whom special sacrifices were offered at the beginning of spring (Bede, *de Temp. Rat.* xv., *Op.*, ed. Giles, London, 1843, vi. 179).

(*b*) *The Sunday after Easter*, with which the Paschal season ends, was formerly called simply *Octava Paschæ*, or *Pascha clausum*; but later it received the name *Dominica in albis* (sc. *deponendis*), because on this day the newly-baptized laid aside their white baptismal robes. In the Greek Church it is styled Κ. τοῦ ἀντίπασχα or Κ. Θωμᾶ, the latter title referring to the Gospel for the day. In England it is traditionally called 'Low Sunday,' for which name suggested derivations are 'Laudes,' the first word in the sequence, or 'Close Sunday' (Procter-Frere, *New Hist. of the Book of Common Prayer*[3], London, 1905, p. 543 n.).

6. **Ascension Day** (*Ascensio Domini*, ἡ ἀνάληψις τοῦ Κυρίου).—The day of our Lord's ascension was commemorated at Jerusalem in the time of Etheria, 380 (*Peregrin.*). It is called by her 'the 40th day after Easter, that is, the fifth feria (Thursday).'

In *Apost. Const.* v. 20 (*c.* 375) it is directed to be kept as a festival. We have sermons preached on this day by Gregory of Nyssa († 395) (*PG* xlvi. 690), Epiphanius († 403; ii. 285, ed. Petavius, Paris, 1622), and Chrysostom (*c.* 405) (*PG* l. 441–452), who speaks of it as an ancient and universal feast. There is Western testimony of about the same date. Five Ascension sermons of St. Augustine († 430) (*PL* xxxviii. 1202 ff.) have come down to us. In the second he says: 'This day is celebrated throughout the whole world.'

7. The Transfiguration of our Lord (*Transfiguratio Domini nostri Jesu Christi*, ἡ ἁγία Μεταμόρφωσις), Aug. 6.—This immovable feast may most fitly be mentioned here among other festivals of our Lord. It was first observed in the East, being noted in the Coptic Calendar (ed. Selden, *de Synedriis*, iii. cap. 15, p. 409) and in the *Menology of Constantinople* (8th cent.; i. 102, ed. Morcelli). In the West the Transfiguration formed the subject of the Gospel for the Lent Ember Saturday (St. Leo, *Serm.* 51 [*PL* liv. 308]), but for long was not otherwise commemorated. Probably the Greek festival on Aug. 6 was introduced by the Crusaders; but it did not come into general observance until 1457, when, in thankfulness for a victory on that day over the Turks at Belgrade, it was appointed for the Church by Pope Calixtus III. (Baillet, ii. 84). It is only a Black-letter day in the Eng. Prayer Book; but in 1892 the Church in the United States assigned to it a Collect, Epistle and Gospel, and proper lessons.

8. Rogation Days.—See FASTING (Christian), III. 4.

9. Pentecost.—By early Christian writers the name 'Pentecost' (sometimes 'Quinquagesima' in Latin authors) was generally given to the whole space of fifty days after Easter. The period was regarded as a continuous festival during which no fast was permitted, and prayer was said standing (Tert. *de Idol.* 14, *de Bapt.* 19, *de Cor.* 3; Basil, *de Spir. Sanc.* 27 [*PG* xxxii. 192]). There is a survival of this use of the word in the Greek Office-books, where the name 'Mesopentecoste' is given to a festival of eight days which begins on the Wednesday before the 5th Sunday after Easter. But even so early as Origen (*c. Cels.* viii. 22 [*PG* xi. 1549]) and Tertullian (*de Cor.* 3) we find the word applied also in the restricted sense to the day which closed the period. The Council of Elvira (305) insists upon the duty of celebrating the day of Pentecost (can. 43 [Mansi, ii. 13]), and subsequently this use of the word prevailed. Etheria (*Peregrin.*) gives this name to the festival, and describes the ceremonial observed at Jerusalem (end of 4th cent.). The Eng. term 'Whitsunday,' according to the most probable derivation, is 'White Sunday,' so termed from the white robes worn by those lately baptized (Procter-Frere, p. 546, n. 4, quoting Skeat), the eve of Pentecost being in the West one of the chief seasons for baptism (Bingham, *Origines*, XI. vi. 7).

10. Trinity Sunday.—The Sunday after Whitsunday was at first known simply as the Sunday of the octave of Pentecost (see *Gelasian Sacram.* and appendix to *Gregorian*). Its observance as the festival of the Trinity was of late and gradual introduction. As the day was a *dominica vacans*, without any distinctive office of its own, the custom arose in some places of using on it the Mass of the Trinity drawn up by Stephen, Bishop of Liége (903–920). This practice was discouraged by Pope Alexander II. († 1073), on the ground that any special festival of the Trinity was superfluous, as every day in the year was consecrated to the honour of the Trinity in Unity (*Micrologus*, 59 and 60 [*PL* cli. 1019]). But the observance of the day grew in popularity in England, Germany, and France, and was sanctioned by several diocesan synods, as, *e.g.*, that of Arles (1260) (Mansi, xxiii. 1006). Finally, the festival was appointed to be observed generally by Pope John XXII. in 1334 (Baillet, iv. 154 ff.). According to the Roman use, the succeeding Sundays until Advent still continued to be reckoned as after Pentecost. The usage of numbering them from Trinity was adopted in England and for a time in Germany. It is now peculiar to the English Church. In the Greek calendar the day is called 'All Saints' Sunday,' K. τῶν ἁγίων πάντων.

11. Corpus Christi.—This festival, the latest in the year of the movable feasts of pre-Reformation date, is held on the Thursday after Trinity Sunday. The commemoration of the Eucharist on Maundy Thursday, the day of its institution, was necessarily tinged with the sadness of Holy Week. It also became overshadowed by the consecration of the sacred oils and the other ceremonies which had subsequently been appointed for the same day. Thus there arose in the Middle Ages a desire for a festival in honour of the Eucharist at another time. Corpus Christi was first kept in 1247, in the diocese of Liége, by direction of Bishop Robert de Thorote, who was influenced, it is said, by a vision which was seen by a nun named Juliana. It was instituted by a bull of Pope Urban IV. in 1264, which was confirmed by Clement V. in 1311, and by John XXII. in 1316 (Baillet, iv. 167 ff.). The observance of Corpus Christi was discontinued in the Church of England at the Reformation.

12. Advent.—See FASTING (Christian), III. 2.

13. Christmas.—See sep. art. under that title.

14. The festivals after Christmas.—With the festival of the Nativity of Christ were associated, at least from the 4th cent., commemorations of eminent saints of the NT. Gregory of Nyssa, in his oration at the funeral of his brother Basil, states that after Christmas and before 1st Jan., the date of Basil's death (379), the Church kept the festivals of Stephen,[1] Peter, James, John, and Paul (*PG* xlvi. 789); and in an earlier panegyric on St. Stephen he explains the principle on which these names were selected, namely, that it seemed fitting that the praise of the proto-martyr should be followed by a commemoration of Apostles (*ib.* xlvi. 725). This statement of Gregory is confirmed by the Syrian Calendar of the same date and country, which contains the following festivals: Dec. 26, St. Stephen; Dec. 27, SS. John and James; Dec. 28, SS. Paul and Peter. The Armenians do not observe Christmas,[2] yet on Dec. 26, 27, 28 they honour the same saints, with the difference that in their order the feast of SS. Peter and Paul precedes that of SS. James and John (Nilles, i. 373, ii. 629). The Nestorians in their calendar follow the same general principle. Their custom is to commemorate saints on a Friday; and on the Fridays following Christmas they observe the feasts of St. James the Lord's brother, St. Mary, St. John Baptist, SS. Peter and Paul, the four Evangelists, and St. Stephen (Maclean, *East Syrian Daily Offices*, p. 265 f.). A similar series of holy days following Christmas is found in the West, with the substitution of the Holy Innocents (Rome) or Holy Infants (Africa and Gaul) on Dec. 28 for SS. Peter and Paul, who in these countries were already commemorated on June 29. The festivals are thus recorded in the Calendar of Carthage (*c.* 505): 'Dec. 26, S. Stefani primi martyris; Dec. 27, S. Johannis Baptistae[3] et Jacobi Apostoli;

[1] In *Apost. Const.* (*c.* 375) viii. 33, among other festivals and times on which slaves are to rest from work, St. Stephen's day is mentioned, but the date is not given.

[2] On Dec. 25 they commemorate SS. David and James as relatives of our Lord—θεοπάτωρ and ἀδελφόθεος respectively.

[3] 'Baptistae' is doubtless a transcriber's error for 'evangelistae,' as St. John Baptist is commemorated in the same calendar on June 24.

Dec. 28, SS. Infantium.' The Gallican liturgies agree with the African and Syrian calendars in celebrating both the sons of Zebedee on Dec. 27; but in the Roman books St. John's name alone was retained, and St. James was subsequently commemorated on July 25. At Constantinople the Roman date, June 29, for SS. Peter and Paul was observed in the 5th cent. (see below, **22** (*a*)); Holy Innocents' day also, under the title of Holy Infants (τῶν ἁγίων νηπίων), was adopted later on, but on the 29th instead of the 28th December.

15. The Circumcision.—The earliest notices of the Christian observance of Jan. 1 represent it as a fast kept with the object of counteracting a riotous pagan festival held at this time of the year (St. Augustine, *Serm.* 198 [*PL* xxxviii. 1025]). The second Council of Tours (567) (Mansi, ix. 796) enjoins (can. 17) that three days at the beginning of January shall be an exception to the rule that all the days between Christmas and Epiphany shall be treated as festivals. In the *Gelasian* and *Gregorian Sacramentaries* the day is simply called the Octave of Christmas (*Octavas Domini*), and the service bears the character of that festival, with a special reference in the proper Preface to the Virgin Mother. The name 'Circumcision' as given to the day is first found in the canon of the Council of Tours mentioned above. It appears also in the *Hieron. Martyr.* (c. 595) and in the Gallican liturgical books of the 7th and 8th centuries, which treat the day as a festival. Byzantine calendars of the 8th and 9th centuries connect Jan. 1 with the Circumcision (*Menology of Constantinople*, i. 83, ed. Morcelli, and Calendar of Naples [Mai, *Nova Collect. Script. Vet.*, Rome, 1821, v. 58]). The Armenian Church, which celebrates the Nativity on Jan. 6 (the Epiphany), naturally observes the Circumcision on Jan. 13 (Nilles, i. 374).

16. Epiphany.—See separate article.

17. Festivals of the Blessed Virgin.—(*a*) It has been noted above (**14**) that the Nestorians hold a festival of St. Mary on the second Friday after Christmas. A similar feast is found in the Coptic Calendar on Jan. 16 (Selden, iii. cap. 15, p. 390). (*b*) In the West the holding of a festival in honour of the Virgin Mother was at first peculiar to countries of the Gallican rite. Gregory of Tours (6th cent.) states that her festival was held in Gaul in the middle of January (*de Glor. Mart.* 9 [*PL* lxxi. 713]). In the *Hieron. Martyr.* (*c.* 595) the date Jan. 18, the same as that of the Gallican St. Peter's Chair (see **22** (*b*), below), is assigned to it (see Mabillon, *de Lit. Gall.* ii. 118 n.). In the Gallican books the precise date is not given, but it is placed early in the year. In Spain the 10th Council of Toledo (656), ch. i., fixed Dec. 18 as the day of the festival, with the note 'that it could not fittingly be celebrated on the most suitable day,' viz. that of the Incarnation, because it sometimes occurred during Lent or the Paschal season, when, according to ancient rule, festivals of saints might not be held (Mansi, xi. 34). At Rome the only commemoration of the B.V.M. was that which was superadded to the service of Jan. 1 (see above, **15**) until the 7th cent., when four festivals in her honour were introduced from Constantinople. All are mentioned in the *Liber Pontif.* i. 376 (*Life of Sergius*, 687–701), and find place in the *Gelasian Sacramentary*.

(*c*) *The Purification* (*Purificatio B.V.M.*, ἡ ὑπαπαντὴ τοῦ Κυρίου ἡμῶν, Ἰησοῦ Χριστοῦ), Feb. 2.—The earliest of these four festivals was the 'Hypapante'; this name, which always continued in the East and was long retained in the West—sometimes in the translated form 'Occursus Domini nostri J. C.'—refers to the meeting between the infant Saviour and Simeon and Anna. Its later name of 'Purificatio' appears first in the *Gelasian Sacramentary* (7th cent.). The events commemorated took place 40 days after the birth of Christ (Lv 12^{2-8}, Lk 2^{22-24}). The festival, therefore, would be celebrated either on Feb. 2 or on Feb. 14, according as the interval is reckoned from Christmas or Epiphany; and the Armenians still observe it on the latter date. The first notice we have of it is by Etheria (*Peregrin.*), who calls it 'Quadragesimae de Epiphania.' Her account of the sermons preached on the occasion as dwelling upon the episode in the Temple leads us to conclude that originally it was a festival of our Lord rather than of the B.V.M. The first title of the day in the Eng. Pr. Bk., 'The Presentation of Christ in the Temple,' therefore sets forth its ancient significance. In the Roman Missal the preface for the day is that for Christmas, and the Collect speaks only of the Presentation. In 542 the festival began to be observed in Constantinople (Theophanes, *Chronograph*, i. 345, ed. Bonn) (see CANDLEMAS).

(*d*) *The Annunciation* (*Annunciatio*, ὁ Εὐαγγελισμός), March 25.—The date of this festival was fixed as being nine months before Christmas. As marking the time of the Incarnation, it, like the Purification, is more properly a festival of our Lord. It must have been widely known in the East in the early part of the 7th cent., as the *Paschal Chronicle* states that in 624 (*Olymp.* 351), Heraclius and his army started for the East on the feast of the Annunciation (i. 713, ed. Bonn). A difficulty about observing the festival on its natural date arose owing to a canon [51st] of the Council of Laodicea (4th cent.) which forbade the keeping of holy days in Lent except on Saturdays and Sundays (Mansi, ii. 572). The Trullan Council (692), while generally endorsing the rule, made a further exception in favour of the Annunciation, *i.e.* it enacts that on all other days in Lent than these the 'Holy Liturgy of the Presanctified' (see 4 (*c*) above) shall take place (*ib.* xi. 968). As regards the West, when the festival was adopted in Spain, the earlier commemoration of the B.V.M. on 18th Dec. (see (*b*) above) was treated as a subsidiary feast to the Annunciation. In the Mozarabic Missal both festivals appear with the same Mass (*PL* lxxxv. 170, 734; Férotin, 491, 492). At a much later date this example was followed in the Roman Church. In 1725 the feast of the *Expectatio Partus B.V.M.* was placed by Benedict XIII. on Dec. 18, with the collects and lections of the Annunciation.

(*e*) The two other festivals of the B.V.M. which came from the East to Rome refer to her more directly. They are the 'Assumption' (*Assumptio*, ἡ Κοίμησις), Aug. 15, and the 'Nativity' (*Nativitas*, τὸ Γενέθλιον), Sept. 8. The Assumption is said by Nicephorus Callistus (*HE* xvii. 28) to have been instituted by the Emperor Maurice (582–602). It was originally styled the 'Falling asleep' (ἡ Κοίμησις, *Dormitio*)—as it still is in the East—of the B.V.M., and commemorated her death. The later title, 'Assumptio,' appears first in the canons of Bishop Sonnatius of Rheims (*c.* 630) (*PL* lxxx. 446). This is its name in the *Gelasian Sacramentary*, though the service for the day contains no allusion to the legend which assigned a special meaning to the word. This is more definitely expressed in the *Gregorian Sacramentary*. It may be noticed that the Assumption, understood as the translation into heaven after death of the body of the B.V.M., is not an article of faith in the Roman Church.

(*f*) *The Conception*, Dec. 8.—This festival of the B.V.M., which is of later origin than the foregoing, gained importance through doctrinal developments. It arose in the East, where it is dated Dec. 9,[1] and

[1] When the feast was introduced into the West and the Roman Calendar followed, the Nativity being commemorated vi. Idus Sept., the Conception naturally was dated vi. Idus Dec.

is known as ἡ Σύλληψις τῆς ἁγίας καὶ θεοπρομήτορος Ἄννης—the word 'conception' in its Greek equivalent being understood in the East in an active sense. It is first mentioned in a sermon of John of Eubœa (middle of 8th cent.) (*PG* xcvi. 1499), and finds place in the *Menology of Constantinople* (ed. Morcelli, p. 80). Through the Greek settlements in lower Italy—its name in the Calendar of Naples (9th cent., ed. Mai, v. 65) is 'Conceptio S. Anne Marie vir.'—it passed into the Western Church, where it appears first in English Calendars and Service-books of the end of the 10th and beginning of the 11th centuries (Leofric Missal, Calendars of Winchester and Canterbury). The festival was suppressed after the Norman conquest, but was reintroduced, at first into Benedictine monasteries, early in the 12th century (Gasquet-Bishop, *The Bosworth Psalter*, p.43 ff.). About the same time we read of the festival in Normandy, where it became so popular that in the Middle Ages it was known as 'Festum nationis Normannicae' (Kellner, *Heortol.* 253). The feast gradually made its way through Europe, but was not received into the Roman Calendar, Missal, and Breviary until 1477 (by Sixtus IV.). In 1854 it was re-named by Pius IX. the 'Immaculate Conception,' and made a day of general obligation. In the Anglican Calendar all these feasts are found, with the exception of the Assumption, which was omitted at the Reformation; but the Annunciation and Purification are alone ranked as Red-letter days.

18. Festivals in honour of St. John the Baptist.—(*a*) *Nativity* (*Nativitas S. Joannis Baptistae*, τὸ Γενέθλιον τοῦ Προδρόμου), June 24.—The date of this festival, suggested by Lk 1[36], was placed exactly six months before Christmas; or, according to the Roman Calendar, on viii. Kal. Jul. as corresponding with viii. Kal. Jan., *i.e.* on the 24th instead of the 25th June. The Festival is of Roman origin, as the Latin date intimates. It is first mentioned by St. Augustine (*Serm.* 287, *PL* xxxviii. 1301), who remarks that the Church celebrates two birthdays only—that of Christ and that of the Baptist. It appears in the ancient Calendar of Carthage (*c.* 505). The festival was accepted in the East at an early date. Notwithstanding the appropriateness of June 24 for this festival, we have evidence that in earlier times St. John's nativity was celebrated in the East and in Gaul shortly after Christmas-tide. The Armenians placed it on the first day lawful for a festival (*i.e.* not Wednesday or Friday) after the octave of the Theophany (Nilles, ii. 565). The Nestorian festival of the Baptist, probably his nativity, on the 3rd Friday after Christmas, has been noticed above (14), and in the Calendar of Tours (490) the 'Natale' appears between the Epiphany and St. Peter's Chair, *i.e.* at the same time of the year. This Calendar has also the festival of June, but strangely calls it the 'Passio' of the saint.

(*b*) *Beheading* (*Decollatio* or *Passio S. Joan Bapt.*, ἡ Ἀποτομὴ τῆς τιμίας κεφαλῆς τοῦ Προδρόμου), Aug. 29.—This festival was adopted in Constantinople before it reached Rome (*Menology of Constantinople*, ed. Morcelli, ii. 222). It is found also in the Coptic Calendar, but with the date Aug. 30 (Selden, iii. cap. 15, p. 376). In the West it appears first in the Gallican liturgical books, where it is undated, but follows at a longer or shorter distance after the Nativity of the Baptist. It is absent from the *Leonine* and *Gregorian Sacramentaries*, and its presence in the Gelasian is probably due to a Gallican interpolation.

19. Festivals of the Cross.—(*a*) *Holy Cross Day* (*Exaltatio crucis*, ἡ Ὕψωσις τοῦ σταυροῦ), Sept. 14, is a Palestinian festival of the 4th century. It is the anniversary of the dedication in 335 of the two churches built by Constantine at Jerusalem—the Martyrium on Golgotha, and the Anastasis over the Holy Sepulchre. The day chosen for the dedication was, according to Etheria (*Peregrin.*), that on which the true cross had been discovered in 320 by the Empress Helena. Thus the festival was regarded as commemorating both events. Etheria (end of 4th cent.) notes that the festival was continued for eight days and was attended by a large concourse of pilgrims. From Jerusalem the festival passed to Constantinople, and thence to Rome, where it is mentioned first in connexion with Pope Sergius (687–701) (*Lib. Pont.*, ed. Duchesne, i. 374, 378). It appears in the *Gelasian* and *Gregorian Sacramentaries*. With the earlier events celebrated on this day another was subsequently associated, which added much to the renown of the feast, namely, the restoration of the true cross to Jerusalem in 629 by the Emperor Heraclius, after his recovery of it from the Persian king Chosroës II., who had carried it away in 614.

(*b*) *Invention of the Cross* (*Inventio crucis*), May 3.—In the churches of the Gallican rite, where the festival of Sept. 14 was unknown, the discovery of the cross was commemorated on May 3. The festival appears in the lectionary of Silos (650) under the name 'Dies sanctae crucis' (G. Morin, *Liber Comicus*, Bruges, 1893, p. 241), and in the Mozarabic Missal and Breviary (*PL* lxxxv. 739, lxxxvi. 1119). In the *Codex of Laws of the Wisigoths* (Paris, 1579), lib. xii. tit. iii. 6, it is included among the feasts on which Jews are forbidden to work. In the *Missale Gothicum* it is placed between the octave of Easter and the Rogation days, but the precise date is not given. It was subsequently adopted at Rome, but was never known in the East. Both festivals are Black-letter days in the Anglican Calendar.

20. St. Michael (*Dedicatio S. Michaelis Archangeli*), Sept. 29.—This, the most ancient Angel-festival, is noted in the *Leonine Sacramentary* (6th cent.), but on Sept. 30, as the day of the dedication of a church of the archangel in the Via Salaria, six miles from Rome (Natale Basilicæ Angeli in Salaria). A later festival of St. Michael is that of May 8, and is connected with a church on Mount Garganus in Apulia. The feast of St. Michael in the Greek Church is kept on Nov. 8, and is relative to a church in the baths of Arcadius built by Constantine (Sozomen, *HE* ii. 3; Martinov, *Ann. Eccl.* p. 273). Legends of apparitions of the archangel are connected with all three sites. At the last revision of the Pr. Bk. (1662), 'and all angels' was added to 'St. Michael' in the title of the festival of Sept. 29—an addition which had appeared already in the Calendar prefixed to Bp. Cosin's *Private Devotions* (1627). The longer description is also not unknown in the Roman Church. In Baillet, iii. 371, the festival is named 'S. Michel et tous les SS. Anges'; the same title occurs in *AS*, Sept. viii. 4 ff., Antwerp, 1762. The festival of the 'Guardian Angels' (*Angelorum Custodum*), March 1, was first observed in Spain in the 16th cent.; and was admitted to the Roman Calendar by Paul V. in 1608. The date was subsequently changed, except in Germany and a part of Switzerland, to Oct. 2, by Clement X., in 1670. For a general account of the Angel-festivals in West and East, see *AS*, Sept., and Baillet (*loc. cit.*).

21. The Maccabees, Aug. 1.—This, which is the only commemoration of OT worthies in the West, was observed almost universally as early as the 5th century. It is found in the early Calendars of Filocalus, Carthage, Polemius Silvius, and Syria. It is the subject of Sermons by St. Gregory Nazianzen (*PG* xxxv. 912), St. Chrysostom (*PG* l. 617), St. Augustine (*PL* xlvi. 874), and others. In the Roman Calendar, it now yields precedence to the feast of St. Peter ad Vincula (see below, 22 (*c*)), which is observed on the same day.

22. Festivals of apostles.—(*a*) *SS. Peter and Paul*, June 29.—The early Eastern commemoration of these Apostles, which closely followed Christmas, has already been mentioned (see above, **14**). The Roman date of the festival has always been June 29. In the Calendar of Filocalus (336), where it first appears, this date is connected with the translation of their relics to a place called 'Catacumbae,' in the consulship of Tuscus and Bassus (258). The Calendar of Carthage is defective here, but there are clear indications that it originally contained the entry; and sermons by St. Augustine (295, 296) on the Festival show that this must have been the case (*PL* xxxviii. 1348, 1352). The festival occurs, but without date, in the Calendar of Tours (490) (Greg. of Tours. *Hist. Franc.* x. 31), and from thenceforward in all Western Calendars and Martyrologies. The observance of the Western date in Constantinople is first mentioned by Theodorus Lector (*HE* ii. 16 [*PG* lxxxvi. 192]). His statement is that through the influence of Festus, a Roman senator who had been sent on a political mission to the Emperor Anastasius in 491, the festival was celebrated with greater splendour than before. It afterwards came into general observance in the East as in the West. In the *Gregorian Sacramentary*, in addition to the Mass for June 29, a Mass in honour of St. Paul is appointed for June 30; and this commemoration is still marked in the Roman Missal and Calendar. This ancillary festival is accounted for by the difficulty which the bishop found in celebrating Mass at the tombs of both Apostles on the same day, and the consequent postponement of one of them until the morrow (Kellner, *Heortologie*, 285). At the Reformation the Church of England made June 29 a festival of St. Peter only, thus confining the commemoration of St. Paul to his Conversion (Jan. 25).

(*b*) *St. Peter's Chair* (*Cathedra S. Petri*).—Another festival of St. Peter appears in the Calendar of Filocalus on Feb. 22 with the title 'Natale Petri de Cathedra.' From early times this has been regarded as meaning the beginning of St. Peter's episcopate; in the Calendar of Tours (490) it is styled 'Natale S. Petri Episcopatus'; but recently a view has been put forward that it refers to the actual wooden chair used, as was supposed, by St. Peter, which is mentioned in a document of the time of Gregory the Great (de Rossi, *Bull. di archeol. Crist.*, Rome, 1867, p. 37 ff.). Whatever may have been the origin of the festival, the choice of the day on which it was held was apparently prompted by a desire to offer Christians a counter-attraction to a popular pagan festival, the 'Cara Cognatio' or 'Caristia,' observed on Feb. 22 in memory of deceased relatives. The festival of St. Peter's chair soon reached Gaul. It is found in the Calendar of Polemius Silvius (448), but under the incorrect designation 'Depositio SS. Petri et Pauli.' It also appears, as we have seen, in the Calendar of Tours. The second Council of Tours (567) complains that Christians sometimes relapsed into pagan rites on this day (Mansi, ix. 803). In Gaul, however, later on, probably in order to prevent the festival taking place in Lent—an occurrence forbidden by the Council of Toledo (see **18** (*b*) above)—it was transferred to an earlier day, which, after some variation, witnessed to by the liturgical books, was fixed at Jan. 18. The two dates appear in the *Hieron. Martyr.*, where the Gallican editor noted Jan. 18, the date familiar to him, as the Chair of St. Peter at Rome; and, finding another 'Cathedra S. Petri' on Feb. 22, he explained the co-existence of the two commemorations by attributing the latter to the episcopate which tradition assigned to the Apostle at Antioch. This diversity of use as to the date of the feast continued until 1558, when, at the instance of Paul IV., both festivals were appointed to be observed with the Hieronymian distinction (Cherubini, *Bullarium Rom.*, Lyons, 1655, i. 822). The feast of St. Peter's Chair has never been introduced into the East.

(*c*) *St. Peter's Chains* (*S. Petri ad Vincula*), Aug. 1.—This festival, which coincides in date with that of the Maccabees (see above, **21**), commemorates the dedication of the Church of St. Peter on the Esquiline, after its restoration in the time of Sixtus III. (432–440). In this church the chains of the Apostle were believed to be preserved, both those mentioned in Ac 12^6 and those of his Roman imprisonment. The feast appears first in the 8th cent., having place in the *Gregorian Sacram.* and in the *Martyrology* of Bede. The Eastern Church has a festival of St. Peter's Chains on Jan. 16 (Nilles, i. 71). In the English Calendar the festival is termed 'Lammas Day,' which, according to the most probable derivation, = 'Loaf-mass,' and refers to an Anglo-Saxon custom of offering on this day bread made from the new corn in thanksgiving for the harvest. Lammas is one of the legal quarter-days in Scotland.

(*d*) *Conversion of St. Paul* (*Conversio S. Pauli*), Jan. 25.—This festival in the *Hieron. Martyr.*, where it is first mentioned, is entitled 'Romae, Translatio B. Pauli Apostoli'; the reference doubtless being to some translation of his relics. In the *Missale Gothicum* it appears bearing the name with which it has come down to us. It is not mentioned in the ancient Roman Sacramentaries. The need for it was not felt at Rome, because there a special commemoration of St. Paul was connected with Sexagesima Sunday. The station for that day was held in the basilica of St. Paul on the Ostian Way; the Collect in the Mass invoked the protection of the Apostle, and the Epistle (2 Co $11^{19ff.}$) narrated his sufferings. The festival is peculiar to the Western Church.

(*e*) *St. John Apostle and Evangelist.*—See **14** above.

(*f*) *St. John before the Latin gate* (*S. Joannis ante portam Latinam*), May 6.—This festival probably marks the anniversary of the dedication of the church at this place in the time of Pope Adrian (772–795) (*Lib. Pont.* i. 508). It is first mentioned in the *Sacramentary* (the *Gregorian*) which has come down to us through this Pope. See COLLECT, **2** (1). The legend of the Apostle being thrown into a cauldron of boiling oil and escaping unhurt came subsequently to be connected with it. A Greek festival of St. John on May 8 commemorates a miracle said to have been performed on his tomb at Ephesus; another on Sept. 26 celebrates his legendary assumption (μετάστασις) into heaven after death (Nilles, i. 154 f., 285).

(*g*) *SS. Philip and James*, May 1.—These Apostles are commemorated on the anniversary of the dedication of a church at Rome in their honour about 561. The day was selected for the purpose because it was already connected with the memory of St. Philip (*Lib. Pont.* i. 306, see n. 2). As only two St. James's are in the Calendar of the West, and St. James the son of Zebedee is celebrated on July 25, it follows that the saint here associated with St. Philip is St. James the son of Alphæus, who is identified with our Lord's brother of the same name. In the Greek Church, St. James the son of Alphæus is commemorated on Oct. 9, St. James, 'the brother of God,' on Oct. 23, and St. Philip, 'one of the first company of the twelve,' on Nov. 14.

(*h*) *St. Andrew*, Nov. 30.—This festival is of exceptional importance as fixing the date of Advent Sunday. It occurs in the Calendar of Carthage (*c.* 505), in which no other Apostles are mentioned by name except St. James the Great

and (probably) SS. Peter and Paul. It appears also in all the Gallican and Roman liturgical books. In the *Leonine Sacramentary* four 'propers' for Masses on this festival are appointed. The date, Nov. 30, is not connected with the dedication of any known church. According to the apocryphal 'Acta Andreae' (*Anal. Boll.* xiii. 349, 372, 378), it was the day of his martyrdom at Patras. It is thus the only festival of an Apostle which makes a claim to being observed on the actual anniversary of his death. The day is held in high honour among the Russians, who reckon St. Andrew as the Apostle and patron of their Church (Martinov, p. 293).

(*i*) The dates of the feasts of other Apostles and Evangelists as celebrated in the West and East are as follows: *St. Matthias*—in West, Feb. 24, in East, Aug. 9; *St. Mark*, Apr. 25; *St. Barnabas*, June 11 (in East, St. Barnabas and St. Bartholomew are commemorated together); *St. James the son of Zebedee*—in West, July 25, in East, Apr. 30; *St. Bartholomew*—in West, Aug. 25, in East, June 11 (see above); *St. Matthew*—in West, Sept. 21, in East, Nov. 16; *St. Luke*, Oct. 18; *SS. Simon and Jude*—in West, Oct. 28, in East, *St. Simon Zelotes*, May 10; *St. Judas* (Thaddæus), June 19; *St. Thomas*—in West, Dec. 21, in East, July 3. We have no evidence for the reason of the assignment of these dates. Probably they mark the anniversaries of the dedication of churches or of the translation of relics.

23. St. Mary Magdalene, July 22.—This festival is first noted in the *Martyrology* of Bede. As regards Service-books, it appears first in a Missal of Verona of the 10th cent. and then in some 11th cent. Missals. It was not received into the official Roman books until the 13th cent. (Kellner, *Heortologie*, p. 313). In the West, St. Mary Magdalene is identified by the Gospel for the day (Lk 7^{36-50}) with the woman who was a sinner. In the Greek Service-books she is described as 'the holy ointment-bearer and equal of the Apostles.' In the English Pr. Bk. of 1549 this festival was retained as a Red-letter day, with Collect, Epistle, and Gospel, the latter being the same as that in the Latin missal. Since 1552 the day has merely been noted in the Calendar.

24. Days of the Martyrs and Confessors.—The earliest martyr festival on record is that of *St. Polycarp*, Jan. 26. The letter of the Church of Smyrna to that of Philomelium giving an account of his martyrdom (*c.* 155) states that it had been thought well to celebrate the 'birthday' of Polycarp at his grave 'as a memorial of those who had finished their course' (*Martyr. Polyc.* 18 [*PG* v. 1044])—words which imply that earlier martyrs had not hitherto been commemorated. In this letter we find for the first time the death of a martyr described as his 'birthday,' *i.e.* into a better world—the name by which it came generally to be known (ἡμέρα γενέθλιος, *natale*, or *dies natalis*, or *natalitia*) (cf. also COMMEMORATION OF THE DEAD, vol. iii. p. 718 f.). We find no trace of the commemoration of other individual martyrs until the 3rd cent., to which belong the earliest noted in the Calendar of Filocalus. At first martyr festivals were entirely local, each Church honouring its own saints. There is, therefore, more likelihood of the days of martyrs being real anniversaries of their deaths than those of Apostles. By degrees these local festivals, or some of them, were adopted by the central or mother-church of the country. St. Cyprian († 258) not only directs that the death-days of martyrs shall be noted, in order that they may be locally commemorated, but also promises that, where he is (*i.e.* at Carthage), oblations shall be celebrated in their memory (*Ep.* 33 [*PL* iv. 328]). Before long the practice arose of one Church adopting commemorations from the Calendar of another, so that eminent saints came to be honoured not only in their own country, but elsewhere. Already in the Roman Calendar of Filocalus appear the Carthaginian martyrs *Perpetua* and *Felicitas* (March 7) and *Cyprian* (Sept. 14). Some, like the last named, passed into the common Calendar of the Church. At first martyrs alone were commemorated, but later on saints otherwise eminent were admitted to share their honours. The authority to admit to the roll of saints belonged originally to the Bishop of each diocese. The first canonization (*q.v.*) in its later sense,[1] by a Pope, was that of *Udalric*, Bishop of Augsburg, by John XV. in 995 (Mabillon, *Actt. SS. Ben. Saec.* v., Paris, 1698–1701, *Pref.* lxviii; Gibbings, *The Diptychs*, Dublin, 1864, p. 33).

Among local festivals which in early times came to be observed should be mentioned the anniversaries of the dedication of churches, the burial days (*depositiones*) of bishops, and their consecration days (*natales*), which were kept during their episcopate.

25. All Saints' Day (*Festum omnium Sanctorum*), Nov. 1.—The origin of this festival is obscure. The *Liber Pont.* (i. 317) relates that Boniface IV. (608–615), having received the pagan temple known as the Pantheon as a gift from the emperor Phocas, transformed it into a church of the Blessed Ever Virgin Mary and all Martyrs, no date of the dedication being given. In the *Martyrologies* of Rabanus Maurus and Florus (8th cent.) there appear, on May 13, 'Natale Sanctae Mariae ad martyres' and, on Nov. 1, 'Festivitas omnium Sanctorum.' The origin of the latter festival is assigned in both works to the consecration of the Pantheon by Boniface IV., the passage from the *Liber Pont.* being quoted in the form in which it passed through the chronicle of Bede (*de Temp. Rat.*, cap. 66, ed. Giles, vi. 323). But the festival of May 13 corresponds better in title with the dedication of the Pantheon, and it is apparently older than the festival of Nov. 1, as it is found in the *Gregorian Sacramentary*, a document of somewhat earlier date, in which the Feast of All Saints does not appear. Adon, who worked upon and supplemented Florus, observed this incongruity; and in his *Martyrology* he attributed the origin of both festivals to the dedication mentioned in the *Liber Pontificalis*. He also supplemented the notice of Nov. 1 with the statement that Louis the Pious (778–840), at the instance of Gregory IV., ordained that the festival of All Saints should be perpetually observed on that day in the Gallic territories. As this event would have occurred in Adon's time, we may believe that we are here, at any rate, on solid ground of history (Quentin, *Les Martyrologes historiques*, p. 636 ff.). In the Eastern Church the Festival of All Saints is kept on the 1st Sunday after Pentecost (see 10, above). It was already observed in Antioch in the 4th cent., as sermons preached on that day by St. Chrysostom have come down to us (*PG* l. 706–712).

26. All Souls' Day (*Commemoratio omnium fidelium Defunctorum*), Nov. 2.—The first distinct notice of the observance of this day is its appointment in 998 by Odilo, Abbot of Clugny, for the monasteries of his order (*Statutum de Defunctis* [*PL* cxlii. 1038]). The first diocese to adopt it seems to have been Liége, where it was introduced by Bishop Notker (*c.* 1008). In the Greek Church the commemoration of the departed is kept on the Saturday before the Sunday called 'Apocreos,' which corresponds to the Western Septuagesima. The Armenians keep it on Easter Monday. The

[1] The word 'canonization' recalls the primitive custom of reciting, during the 'canon' of the Mass, the names of deceased martyrs and saints which had been inserted in the Diptychs.

day ceased to be observed in the Anglican Church at the Reformation.

27. Octaves.—The word 'octave' signifies the eighth day, or the period of eight days after a festival, treated as a repetition or a continuation of the feast. The usage may have been suggested by the rule laid down for the prolongation of the chief OT festivals (Lv 23[8. 34ff.]). The first octave of which we read is that of Easter, during which the newly-baptized continued to wear their white garments. Etheria (*Peregrin.*) notices the custom at Jerusalem in connexion with Epiphany, Easter, and the Dedication days of the churches called the Martyrium and the Anastasis. She speaks of the eight Paschal days as kept everywhere. At first octaves were generally attached only to festivals of our Lord, but in the 8th and 9th centuries a few of the greater saints were similarly honoured (Amalarius, *de Eccl. Off.* iv. 36 [*PL* cv. 1228]). In mediæval times, octaves became more numerous, chiefly owing to the liturgical influence of the Franciscans (Kellner, *Heortol.* 15). In the Eastern Church a similar custom is known by the name 'Apodosis,' but the period observed is not always a week; it may be longer or shorter (Neale, *Eastern Church*, Gen. Introd. 764; Daniel, *Codex Liturg.* iv. 230 n.).

28. Vigils and Ember Days.—See FASTING (Christian), III. 6 and 5.

29. The days of the week.—The Latin and Greek names in liturgical use are 'dies dominica, feria secunda, f. tertia, f. quarta, f. quinta, f. sixta, sabbatum'; (*ἡμέρα*) *κυριακή, δευτέρα, τρίτη, τετάρτη, πέμπτη, παρασκευή, σάββατον*. Why 'feria,' which in classical use means a holy day, should be employed for an ordinary week-day is unknown. The most reasonable explanation is that, as the Jews numbered the days of the week from the Sabbath, saying the 'second of the Sabbath,' the 'third of the Sabbath,' etc., so Christians, adopting the same method, substituted, for 'Sabbath,' 'feria' as an equivalent for 'Lord's day,' the holy day from which they counted (Valesius, *Annotationes in H. E. Eusebii*, Paris, 1678, p. 155 f.). The names for the days of the week which the early Christians found in general use—as, in Latin countries, 'dies solis, lunae,' etc.—were deemed by them inappropriate, as derived from pagan gods. At the Reformation in England, when the vernacular was again used in the Services of the Church, the popular names, which had long lost their pagan associations, were naturally admitted into the Prayer Book.

30. Classification of festivals.—(*a*) Lanfranc († 1089), in his *Statuta pro ordine S. Benedicti* (ed. Giles, i. 126 f.), distributes festivals according to their importance into first, second, and third classes. These came to be known as Doubles, Semi-doubles, and Simples. A double festival probably derived its name from the usage which before the 9th cent. prevailed in Rome and elsewhere on greater feasts, of reciting two offices, one of the *feria* and the other of the festival. In process of time the classification of festivals became more elaborate until it reached the system in force at the present day, according to which there are six grades in the Roman Calendar, viz. Doubles of the 1st class, Doubles of the 2nd class, Greater Doubles, Doubles, Lesser Doubles, Simples.

(*b*) The festivals of the Latin Church are also known as *Festa chori*—i.e. those obligatory on the clergy only, and confined to the celebration of Church offices; and *Festa chori et fori*—i.e. those which lay people are bound to observe by attendance at Mass and rest from labour. In modern times there has been a large transference from the latter class to the former, chiefly owing to the pressure of civil authorities. Thus the festivals of general obligation have been considerably reduced in number, but no uniform rule prevails. In England the settlement made by Pope Pius VI. in 1777 has been but slightly modified since. At present, in addition to Sundays, the following holy days are observed: Christmas, the Circumcision, Epiphany, the Ascension, Corpus Christi, SS. Peter and Paul, the Assumption, and All Saints. To these St. Andrew's Day is added for Scotland, and St. Patrick's Day and the Annunciation for Ireland. In the United States, by Papal decree of 1866, six days only, besides Sundays, are of obligation, viz. Christmas, the Circumcision, the Ascension, the Assumption, All Saints', and the Immaculate Conception. In France, the observance of holy days is reduced to the lowest point. The settlement there dates from the reinstating of the Church after the Revolution. By concordat of the Pope with Napoleon, four days only besides Sundays were made obligatory, viz. Christmas, the Ascension, the Assumption (selected because 15 Aug. was Napoleon's name-day), and All Saints. All other festivals, when they fell on a week-day, were transferred to the following Sunday.

(*c*) In the Church of England, all the feasts for which a special Collect, Epistle, and Gospel are provided (Red-letter days) are appointed to be observed; all others (Black-letter days) are simply noted in the Calendar (see Table of Feasts and Calendar in Pr. Bk.).

(*d*) In the Greek Calendar the festivals are distributed into three classes—Greater, Intermediate, and Lesser—corresponding respectively to the Latin Doubles, Semi-doubles, and Simples. The Greater class is subdivided into three sections: I. † Easter, which stands alone; II. † Christmas, † Epiphany, † Hypapante, † Annunciation, Palm Sunday, † Ascension, † Pentecost, † Transfiguration, † Repose of B.V.M., Nativity of B.V.M., † Exaltation of the Cross, † Presentation of B.V.M.; III. † Circumcision, Nativity of St. John Baptist, SS. Peter and Paul, Beheading of St. John Baptist. The Intermediate class includes the 12 Apostles (except those noted above) and certain Greek saints, such as St. Basil, St. Gregory Nazianzen, St. Chrysostom, with St. Elias the Prophet, St. Michael the Archangel, etc. The Lesser class contains all the other saints whose names appear in the Calendar. In the above lists the festivals marked † are days of general obligation, known as *τελείως ἄπρακτοι*, *i.e.* when work is abstained from; all the rest are described as *ἐν μέρει μὲν ἄπρακτοι, ἐν μέρει δὲ ἔμπρακτοι* (Nilles, i. 34).

31. (*a*) In the Eastern Calendars, OT prophets and Saints are freely commemorated—a feature which is in marked contrast with the omission of all such from the Western Calendar, with the exception of the Maccabees. Thus, to take for example the first and last months of the year, in January the prophets Malachi, Elijah, and Isaiah have days assigned to them; in December, Nahum, Habakkuk, Zephaniah, and Haggai. Among other commemorations which have no parallel in the West are Jan. 22, 'The 6th Oecumenical Council'; May 7, 'The Sign of the Cross which appeared in heaven'; May 11, 'The Birthday of Constantinople'; Aug. 16, 'The Icon of our Lord not made with hands.'

(*b*) Among the Greeks and Armenians, Saturday is still, as in early times (see above, 1 (*c*)), treated as a festal day, almost as a second Sunday. It is marked by a celebration of the Eucharist even at seasons when no other week-days are so honoured. Among the Nestorians, Friday holds a similar position. Throughout the year it has its own name and office like Sunday, and upon it the festivals of the greatest saints are fixed in regular course (see above, 14).

FESTIVALS AND FASTS (Egyptian).—

I. *SOURCES.*—Egypt is extremely rich in this respect.

1. We have first of all *the tables enumerating the festivals* in regular series, or in the form of chronological annals of a religious sanctuary. The ordinary form of the first-named is that of the temple calendars (cf. CALENDAR [Egyp.], VII. 3). The specimens most worthy of mention, in order of date, are those of Karnak (XVIIIth dynasty), Medinet-Habu (XXth dynasty), Edfu (Ptolemaic), Dendereh and Esneh (Roman period). The famous 'Stone of Palermo' (Vth dynasty) is a good example of the second type.

Individual mention of a long series of festivals (sometimes augmented by brief descriptions or explanations as to their value or aim) is made from time to time in the corpus of the Egyptian texts. As principal types we may mention: (*a*) historical mural inscriptions or official stelæ of the temples; (*b*) numerous extracts of temple inscriptions of a non-historical character; (*c*) allusions to or enumerations of private stelæ or inscriptions engraved upon private statues; so-called funerary literature adds a long list in (*d*) the festivals quoted in the collections known as 'Books of the Dead' (cf., *e.g.*, chs. xviii.–xxi.); (*e*) funerary calendars, more or less complete, written on the sides of sarcophagi (the best specimen is the coffin of Babe in the Museum of Cairo, containing a list of a hundred local festivals [VIIIth dynasty]); and, finally, (*f*) the festivals mentioned (and sometimes described) on the walls of *mastabas* or hypogea (cf. for the Theban series, the tombs of Einna, Monna, and Nofirhatep, all belonging to the XVIIIth dynasty).

2. *The representations*, properly so called, of festivals of all kinds are sufficiently numerous to permit of reconstituting in the greatest detail the aspect and material order of these ceremonies. The two sources of information are the bas-reliefs of the temples, and the frescoes or reliefs of private tombs. From the immense list of the former, a good chronological series of types may be derived: (*a*) the representations in the royal chapels of the Pyramids of Abusir (Vth dynasty); (*b*) the temple remains recently found by Petrie in Memphis (XIIth dynasty); (*c*) the famous representations of the procession of the grand colonnade of Luxor (XVIIIth dynasty); those of the 'festival hall' of Thothmes III. at Karnak (XVIIIth dynasty); of the inauguration of the Nubian temple of Soleb (XVIIIth dynasty); of the triumphal procession of Deir el-Bahri (XVIIIth dynasty); (*d*) the ceremonies represented at Gurneh (XIXth dynasty); the great festivals of Mîn represented in the Ramesseum (XIXth dynasty), and at Medinet-Habu (XXth dynasty); (*e*) the jubilee festivals celebrated by Osorkon at Bubastis (XXIInd dynasty); (*f*) the festivals or processions engraved on the walls or ascending passages of the Great Temple of Edfu (Ptolemaic period); (*g*) the representations of processions on the famous staircases of the sanctuary of Dendereh (Roman period). The representations on the tombs, principally under the Theban Empire, add a considerable wealth of episode and detail. We must confine ourselves to mentioning here: (i.) the wonderful series of royal or sacerdotal festivals reproduced in the private tombs of Amarna (of special value for the very individual life of Egyptian society under the heretic Amenhotep IV.); (ii.) the representations dispersed throughout the necropolises of Thebes (XVIIIth–XXIst dynasty). The frescoes of the high priest Iumaduait may be regarded as the most beautiful example descriptive of the great festivals of the Theban cult under the later Ramessids.

3. The combination of these two sources of information gives the dates, the places, and the material form of the Egyptian festivals. Their nature, their aim, their significance, and a great number of details of every kind, are furnished by the *descriptive texts*. Some of these belong to the inscriptions in the temples (*e.g.* the long descriptions of the festivals of Edfu, or the famous series of the 'Mysteries of Osiris' at Dendereh); others come from a combination of the information furnished by the private stelæ (*e.g.*, in regard to everything connected with the feasts of the battles and death of Osiris at Abydos); the *ex-votos* of cures or oracles (cf. DIVINATION and DISEASE AND MEDICINE [Egyp.]) add a great number; finally, the papyri of administrative or private correspondence (principally for the last centuries) serve to complete our knowledge down to the minutest detail (cf., *e.g.*, the papyri of the Ptolemaic period for the διάβασις of the Theban Ammon).

To these properly Egyptian documents, the classical Græco-Roman world adds the wealth of its knowledge (sometimes, however, to be received with caution, especially as regards the interpretation of origins or the esoteric meaning of festivals). The long series of texts from Herodotus, Strabo, and Plutarch, or Diodorus, down to Latin literature, was collected last century by Wilkinson with a care which leaves very little to be added by modern bibliography.

The total actually known of Egyptian festivals of all kinds—general, local, exceptional, royal, funerary, commemorative, etc.—exceeds, in round numbers, 1500. Of course, this figure must not deceive us as to the real number of festivals taken part in by the national life of Egyptian society (cf. below). It is none the less certain, however, that a classification is necessary for the understanding of this enormous series. The most satisfactory method seems to be a division of the festivals according to their chief character, without taking account of chronological details or geographical divisions. Such a procedure is artificial, but it places the information most quickly at the command of the reader.

II. *CLASSES OF FESTIVALS.*—1. Local festivals having reference to the life of local gods.—It has been pointed out in a former article (CALENDAR [Egyp.] VI.) that the repetition or commemoration of the acts of the legendary life of the gods, celebrated at times which were foreseen and *fixed*, marked a decisive advance in the religious civilization of nations. The study of uncivilized peoples makes it possible to follow the series of attempts culminating in the point at which the history of Egypt has already arrived. We may summarize the

festivals of the local gods under the following heads:

(*a*) *Anniversary of the birth of the god* (specimens: Stone of Palermo, Sarcophagus of Babe).—Practically speaking, the date of these festivals seems to have been based upon the astronomical determination of the heliacal rising of a star, or upon the reappearance in the firmament of a constellation supposed to be the habitation, or one of the 'souls,' of the divinity (an exception is made, naturally, for the gods of 'Nilotic' character or those of solar character, for whom the system is much more complicated).

(*b*) *Festivals having the character of 'seasons of the year,' associated with a local god (not including the feasts 'of the Inundation').*—These are more especially the festivals of the 'first day of the year,' coinciding with the reappearance of the star Sothis (Sirius), and the beginning of the rising of the Nile (end of June). The festivals of the New Year at Dendereh, where the statue of the goddess is brought on to the terrace of the temple and there receives the first rays of the rising sun, are a good example.

The commemorations of cosmogonic events of the historical period were at first, before theology had made itself felt, simply 'naturist' festivals. Such were, *e.g.*, the festivals of the 'rising of the heaven' (*i.e.* its separation from the primordial earth and water), the anniversary of which was celebrated in a number of Egyptian towns, *e.g.* the great festival celebrated at Heracleopolis on the 1st of the month of Phamenoth.

(*c*) *The legendary episodes of the life of the gods* constitute probably the most ancient festivals. Most of these commemorations consist principally in sham battles, and seem to be reminiscences of fights attributed by local history to the war between the friendly divinities and the monsters who were enemies of man (cf. DUALISM [Egyp.]). The myths of Osiris and of Set disguised them, in the historical period, as the anniversaries of the principal dates of the war between Horus and Set-Typhon. The traces of the pre-historic period may still be found in many typical details (magical dances, disguises, masks, etc.), and suggest instructive connexions between them and the mimetic ceremonies of uncivilized peoples. Some, still more ancient, seem to have been linked, before any attempt at cosmogonic religion had been made, to the magic festivals in connexion with hunting or fishing, such as are still celebrated by races of a lower degree of culture.

(*d*) *The local life of Divine idols.*—Like the local lords and princes, who were their heritors, the Egyptian gods lived in effigy the life of lords of the manor in their sanctuaries. The walks which they took for pleasure or inspection, their excursion into their 'houses of rest' during the fine season, form the *schema* of a series of festivals which the calendar spreads over the whole length of the year. It is of these 'outings' (*khau*) and journeys that the Theban collection, thanks to the exceptional wealth of its contents, gives us an abundant list, illustrated and commented upon by hundreds of texts.

The festivals of Amon, those of Maut his wife, and of their divine son, Khonsu, represent for us the visit paid by Amon to Maut and Khonsu in their sanctuaries; the Mother-goddess or the Son-god paying a visit to the head of the family in the great temple of Karnak represents the joyful excursion of the statues of the three divinities to the Thebes of the south (=Luxor). The διάβασις of Amon on the west side of the capital, and the festival of the valley, the 'great festivals' of Amon-Minu at Medinet-Habu and at the Ramesseum, 'the beautiful festival of Amon in Thebes,' and the small festivals, such as that of the 6th day of the month, are not peculiar to the civilization or the province of Thebes. What we know of Edfu, Dendereh, and Memphis shows us a calendar quite as full of rejoicings. Memphis could enumerate an equally long list for the 'outings' or the 'manifestations' of its god Ptah, in 'great' or in 'small' festivals. The only difference in favour of Thebes arises from its position as capital, for the time being, of Egypt, and from the number of monuments which it has left us by reason of this privileged position. Everywhere, in the same way, the dividing up of the divinity into idols having a special epithet and a particular cult has brought about festivals in keeping with this special 'aspect' of the divinity. Khonsu, 'Lord of Joy' (in Thebes, 'Beautiful Rest'), and Khonsu, 'of the magnificent union,' had distinct anniversaries for their rejoicings or processions, just as Ptah, the 'modeller of the world,' and Ptah, 'of the districts of the South,' had theirs.

(*e*) A series of local festivals of a more essentially 'naturist' character is connected with *the cycles of rejoicings proper to each region of Ancient Egypt.* The gods naturally take part in them, but the connexion with their rôle or their legend is here less evident. The festival of the 'reception of the river' (Beni-Hassan, Kahun, etc.), and the festivals of the 'arrival of the Nile' (Silsileh), of the 'beginning of the rising' or the 'opening of the canals' (*passim*), are the most conspicuous. The popular character of these rejoicings, as revealed in our sources and in the classical authors, shows a strong resemblance to what, during last century, was still the character of festivals such as that of the opening of the *khalig* at Cairo. Similarities are equally evident in festivals such as those of the ὑδρευσις mentioned by the contemporaries of the Alexandrian civilization, and all those popular 'assemblies' where the people went into the country or to the neighbouring necropolises or into the 'valley' (Thebes, Dendereh, etc.), to make bouquets of *honit* or *tekhui* flowers, to eat lentils, or to taste the sweetness of new honey, while repeating the saying: γλυκὺ ἡ ἀλήθεια—as Plutarch tells us (*de Is. et Osir.* 68). The description of rejoicings of this kind gives the impression of something quite analogous to the festival of 'onions' in modern Greece, or to the *shamm an-nasīm* so dear to the hearts of the lower-class people of modern Egypt (see below, p. 884[a]).

2. **Inter-provincial festivals.**—The statues of the chief divinities of the nomes came out once or twice a year to pay visits of great pomp to their neighbours. Information in the form of accounts of these journeys abounds in the principal temples. Harshafitu of Heracleopolis went to see Hathor of the Fayyum, and the latter came to visit him in her turn. Edfu saw Hathor of Dendereh arriving with an immense suite of priests and followers; and Horus of Edfu afterwards went with as long a train to the festivals of Dendereh. The whole of Egypt was continually being crossed and recrossed by these Divine processions. The rejoicings lasted several days, and sometimes several weeks. Picturesque descriptions of them are not wanting, and show that the whole population took part, augmented by thousands of pilgrims from outside, not to mention, of course, the presence of the princes of the respective provinces of the visiting gods, their officers, and the whole of their clergy. The episodes of sham wars and massacres, of great popular affrays, and certain strange scenes where troops of animals (oxen, goats, etc.) were hunted, whipped, or put to death, connect these ceremonies with the highest antiquity. Over and above the legendary wars of the Osirian myth, we catch glimpses of magical feasts, with propitiatory rites in connexion with hunting or tribal wars, similar to those which are found among modern uncivilized peoples.

3. **Festivals of a national character.**—The mechanism which set these festivals in motion is easy to re-construct. To begin with, part of them took their rise simply in the successive political preponderance of the large towns of Egypt. The festivals of the local gods of Memphis, Thebes, and the Delta became those of the whole of Egypt as each town in turn was the first city of the valley of the Nile. The nation adopted in each case the local dates of the festivals or anniversaries, and established them as general feast-days. Their

splendour tended to pale with the decline of the town to which the god really belonged; it diminished in favour of new-comers. Thus it comes about that at the time of Herodotus the great festivals of the gods of Upper Egypt had given place to those of the divinities of the Delta, because it was in Lower Egypt that the dynasties of the Bubastites, the Tanites, and the Saites had established the political centre of the Empire. The great pilgrimages, which drew the faithful by hundreds of thousands, are held henceforth in connexion with the festival of the divinities of Bubastis, Sais, and Buto. But side by side with this first changing group, a certain number of festivals, throughout almost the entire course of Egyptian history, are celebrated all over Egypt at one time. They are almost all connected, as is only logical, with those gods who, with the chief god Rā, were accepted as the universally adored gods, by the side of the local gods (with whom they are frequently confused). These are, then, festivals in connexion with Ptah-Sokar and with Osiris. As well as having in all the large towns special sanctuaries, where the festivals of their particular calendars were celebrated, their great anniversaries always drew to Memphis, Mendes, or, more especially, to the mysteries of Abydos huge crowds which came from all parts of Egypt.

The famous Osirian festivals of the month of Choiak at Dendereh seem to have acquired a more gradual popularity, and to have become famous only when the festivals of Abydos declined. As to the Heliopolitan festivals, which are as ancient as the very history of Egypt, they seem to have retained a monarchical character of high sacerdotal initiation, which separates them absolutely from the great pilgrimage festivals of the other famous sanctuaries. The national festivals are connected more especially with the funerary life of Ptah-Sokar, Osiris, and their devotees (*e.g.* the festival of the 'Round of the Walls'), and ought, rationally speaking, to be taken rather in connexion with the festivals of the dead (cf. below).

4. **Anniversaries of a historical or pseudo-historical character.**—Although still having a connexion with the divine life, the festivals in question have reference rather to acts done by human chiefs and to their commemoration. The Thinite monuments and the Stone of Palermo represent for us, as regards the most ancient period, the 'festival of beating Anu' or that of 'constructing the defences of Dewazefa,' which may be connected with memories of the *real* great wars of primitive Egypt (but with reserve as regards the mythological share). More definite anniversaries were instituted by the Pharaohs of the first Theban Empire, and celebrated the conquests of the monarchy. The 'festival of repelling the troglodytes' and that of 'taking captive the Nubians' were still commemorated, after having been instituted by Usirtesen III. (XIIth dynasty), under Thothmes III., in the middle of the New Empire.

At the same time, we ought not to be deceived by these anniversaries. At certain times, some Pharaoh might renew them out of devotion to one of his ancestors, or to show that he was repeating his exploits. But in the interval they had fallen into disuse, and everything tends to prove that festivals of this type rarely survived their founder.

5. **Foundation of sanctuaries.**—The great decorative compositions and the connected texts in the temples of Deir el-Bahri or Soleb, as well as the frescoes of Amarna, give us, with much wealth of detail, the festivals which took place at the foundation of new temples. The arrival of the royal procession, the ritual of foundation, the laying of the first stone (Edfu), the ceremonies of inauguration, of the first sacrifice, and the rejoicings accompanying all may be followed step by step. As regards Amarna in particular, the biographical pictures left by the principal dignitaries on the walls of their tombs add very valuable information to the official descriptions given by other documents, in that they show in a life-like way the popular gaiety and joyous excitement of the crowd.

6. **Coronations and royal jubilees.**—The categories of anniversary festivals in relation to the life of sons of gods are not numerous in the history of Egypt. The festival of the birth of the Pharaoh does not seem to have been celebrated in a regular way; the festival of giving the name was necessarily confused, through the mechanism guiding the making of royal names, with the festivals of the great gods. The coronation and the jubilee (*sadu*) are the two great ceremonies. The first divides itself naturally into a series of distinct festivals, ranging from the solemn recognition of the king by the chief of the gods, the presentation to the people in the court of the temple, and the adoption of the 'sacred name,' to the consecration properly so called. This last ceremony was fixed from the very beginning to be held at Heliopolis; the few remaining Memphite monuments represent it as being attached to that town, and it is seen from historical inscriptions that the rule of the Pharaoh was not considered valid till after the traditional solemnities had been accomplished at the Heliopolitan sanctuaries. Piankhi himself, the conqueror of Egypt, was not considered the legitimate king of Egypt until he had undergone, in the ancient capital, all the long ceremonies fixed by the custom of thousands of years. Without discussing here the difficult question of the exact nature of the *sadu*, it is evident that its jubilee nature makes it a repetition of the festivals of the coronation. Through it we obtain part of the material details which are lacking with regard to certain points of the coronation, for the festivals of *sadu* have everywhere been represented on Egyptian monuments either in a shortened form or at full length.

The texts of the Pyramids show that the episodes represented on the monuments commemorative of the *sadu* (*e.g.* at Memphis [XIIth dynasty]) existed as early as the proto-historical period. They are found almost unaltered down to the time of the Ptolemys. In this latter period Heliopolis lost the privilege, which Memphis gained, of seeing the Pharaoh crowned. The most detailed and curious scenes representing the magnificent pomp of these festivals and the concourse of all the dignitaries of Egypt are represented in the bas-reliefs of the 'festival hall' of Osorkon II., found and re-constructed in 1892 by Naville at Bubastis.

7. **Royal episodic festivals.**—Besides the participation of the Pharaoh in the great festivals of the cult or in the commemorations of his own reign, two distinct series of festivals have been left us by the monuments.

(*a*) *Those having reference to expeditions of war and celebrating the victories of the Pharaoh or his triumphal return.*—The royal procession with its booty and its captives, the solemn arrival of ambassadors or tributes from foreign lands, and sacrifices and offerings presented in thanks to the Divine Lords are the subject of immense decorative compositions on bas-relief and frescoes, either in the temples themselves (Karnak, the tower of Luxor, Ramesseum, etc.) or on the walls of private tombs (necropolises of Thebes and Amarna).

(*b*) *Those accompanying the different acts of royal life* (birth of princes, marriages, journeys, inauguration of palaces, etc.).—The sources, which are still rather incomplete, are furnished especially by the paintings of Amarna, which constitute in this respect a series of historical pages of the highest interest. We must make special mention of the arrival of the famous queen-mother Tyaa at her new palace, and the manifestations of all sorts which marked her arrival from Thebes (banquets, popular rejoicings, midnight banquets, processions of musicians and of torch-bearers, military parades, official processions, etc.).

8. **Festivals of a funerary character.** — The enumerations or calendars of the Memphite *mas-*

tabas (IVth–VIth dynasties), of Dendereh (VIIth dynasty), of Syut (Xth dynasty), of Bersheh, Gebrawi, and Beni-Hassan (XIth–XIIth dynasties), of the Theban necropolises (XVIIIth–XXVIth dynasties), give us the complete lists. The character of these festivals has been shown in art. CALENDAR (Egyp.). The form of procedure is the same as for the festivals of the gods. The cults of local gods of the dead and the festivals of these funerary gods became, at least in regard to some of the gods, national anniversaries, which were little by little all fused into the great cycle of the cult of Ptah-Sokar-Osiris. The placing of the god in the coffin and then in the tomb, the planting of sacred trees or mystic insignia (ancient fetishes [?]), the mourning of the divine family, the apparent death of the god and his subsequent resurrection, form so many episodes giving rise to distinct festivals, with which are connected the festivals of ordinary dead persons. The participation of the living in the principal anniversaries (see the frescoes of the Theban tomb of Nofirhatep) gradually modifies their character. The *agapes*, the so-called 'funeral banquets,' the general mourning on the days consecrated to the dead, the annual pilgrimages to the necropolises, the days of magic 'navigation' of the souls towards Abydos (festival of boats, the prow of which is turned towards Abydos in the night 'when the officiating priest awakes in tears'), the festival in which the processions go by the light of torches to seek the statues of the dead in the necropolises, and the festival in which 'the round of the walls of the Temple is made praying for the venerated dead,' the festival of new fire, are only *excerpta* which may be quoted in passing. Herodotus (ii. 62) has given a picturesque description of the episode of the 'festival of the Lamps.'

III. *MATERIAL CHARACTERISTICS AND GENERAL CHARACTER.*—The description of the pomp of these great Egyptian festivals cannot be made the object of even the briefest description in a summary so condensed as this. The Theban pictures show their gaiety and magnificence (see Lit.): troops of dancers and singers, companies of soldiers, troops of negroes, orchestras, officers and priests, processions of bearers of offerings or sacred objects, emblems, banners, etc. We have, in a word, along with the local modifications of Egyptian civilization, the signs of rejoicing which are present in festivals all the world over. The three more particularly Egyptian characteristics of these immense processions are: (*a*) the sacred boats, carried on litters, on which are placed the tabernacles of the images of the gods; (*b*) the carrying of insignia and emblems, in which may sometimes be recognized the survival of very curious archaic fetishisms (the 'box' of Min, vases, *didu*, thrones with the emblem *khaibet*, etc.); (*c*) the participation in the festivals of small portable statues of deceased kings or of the reigning king. This participation of the royal 'souls' is made clear by numerous inscriptions and by the bas-reliefs of Medinet-Habu, Deir el-Bahri, Karnak, Ramesseum, Gurneh, and Luxor.

Certain traditional and especially venerated statues (*e.g.* those of Ahmes I. and Nofritarit), which were continually being embellished or re-made in precious material, seem to have played a part similar to that of the most famous images of certain of our Christian sanctuaries. The participation of high dignitaries and the local nobility in these festivals would require a long article for itself alone. It is to be regretted that the magnificent representations on the staircases of Dendereh, and more especially of Edfu, have never been popularized as they should be by modern reproductions.

The frescoes of Amarna and the notes made by Herodotus during his travels illustrate briefly the part played by the populace in all these ceremonies: the noisy and sometimes licentious gaiety of the crowds which flocked to the pilgrimage, the thousands of devotees encamped in the approaches to the sanctuary, give the impression that a festival of modern Egypt, like the famous fair of Tantah, must still present an accurate picture of what a great festival of Egypt at the time of the Pharaohs was like.

The religious ceremonies which were there gone through consisted essentially in the following:

(*a*) A representation of celestial navigation by small sacred boats on the sacred lake of the temples. This is probably the most ancient source of the theme of the procession; it is connected with the organization of mimetic magic in its civilized form. (*b*) Journeys (by land and sea) taken by the statues of gods, visiting their various provincial sanctuaries. As if they were real living guests, they receive gifts on their arrival, and are entertained at solemn feasts; they are washed, anointed, perfumed, and robed. Sometimes they rest for the night 'on a bed of flowers.' During their journey they halt at 'stations of rest,' analogous to the *reposoirs* of Roman Catholic state processions. A solemn sacrifice marks the culminating point of the ceremony. (*c*) Visits of the gods to the tombs of deceased kings or princes in the necropolis, on the great days of commemoration of the dead. (*d*) The presence of divine statues at the solemn acts symbolizing the great events of agricultural life (the rising of the Nile, the cutting of the first sheaf at the harvest). (*e*) Sacred dramas, consisting particularly in representations of wars, battles, and brawls, interspersed with songs and incantations. The 'mysteries' of the type of Mendes, Abydos, and Dendereh are of a more complicated kind; in them was given a representation, lasting for some days and taking place at various points of the sacred territory, of the wars of the god, his death, the battles of his supporters, his entombment, and his resurrection. The making of symbolical images of the god, which had been broken in pieces, associating his death and resurrection with the processes of the death and resurrection of the substances of Nature (corn and vine), is the most salient feature of the famous Osirian festivals of the month of Choiak. Ceremonies like those of the great pilgrimages naturally lasted several days, and in certain cases even several weeks. Festivals of even a local character, like the 'great outing of Amon,' were extended for a whole month throughout the Theban territory.

What has been said in the articles CALENDAR (Egyp.) and DUALISM (Egyp.) explains clearly enough the essential meaning and aim of the elementary acts constituting the framework of the festivals as well as the character of pilgrimages or processions in connexion with the cult of the gods. The very nature of the festivals of foundation or the royal festivals shows us their value and their intention. What must be more strongly emphasized, as belonging specially to Egypt, is the importance which the participation in ceremonies had for an Egyptian. The festival of an Egyptian god was not only a magic reproduction, which became later a symbolical commemoration; the living and the dead really participated in the virtue and the favourable influences which flowed from the accomplishment of these 'outings' of the gods. Men contributed, along with their divinities, towards the maintaining of 'order'; their enthusiastic gratitude for the work accomplished by the gods in the past, combined with their confidence in them for future struggles, led them to consider participation in the sacred dramas as a real religious duty, the performance of which acquired merit and a sure outlook for the future life. In many respects a pilgrimage to the festivals of Abydos must have constituted for the Egyptian a meritorious act analogous to that of a Musalmān's pilgrimage to Mecca.

GEORGE FOUCART.

FESTIVALS AND FASTS (Greek).[2]—A writer on this subject has abundance—embarrassing abundance almost—of material for the first part of the title, but very little for the second, unless it be made to include all religious rites not of a wholly joyous nature; and, even then, the festivals are still greatly in the majority. Greek religion was, on the whole, a very cheerful affair, and, among a people whose ordinary diet was Lenten enough, actual days of abstinence (νηστεῖαι) were not common. Throughout this article we propose to use 'festival' as a general term, corresponding to ἑορτή, for any kind of a periodical observance, whether joyous or sad. We can hope only to give a bare outline description, with a few illustrations, of the general nature of Greek festivals in the classical period, with some slight account of what we believe to have been their origin. They may be classed thus:

(1) *Agricultural.*—Under this head fall an immense number of festivals in honour of deities who, in origin at least, are gods of ploughing and sowing, harvest and vintage. In this connexion, therefore, it may be well to understand clearly, once for all, at what times in the year various agricultural operations were, and are, carried on in Greece.[3] *Ploughing* comes (*a*) in October, (*b*) in spring. *Sowing* is at the end of October (ἐνωρῆς, 'early,' as it is called nowadays) and in November (ὀψέ, 'late'). *Harvest*, beginning with barley, is from the end of April to the middle of June. Hence the modern peasant calls June Θεριστής, 'harvest-month.' *Threshing* takes place in July (Ἁλωνάρης, 'threshing-month'). The *vintage* is in September (Τρυγητής, 'vintage-month').

(2) *National and commemorative.*—Under this head we include such festivals as the Panathenaia, and the anniversaries of victories. Of course, they were often dedicated to 'agricultural' deities; but their intent was to commemorate, not the god's power in Nature, but his dealings with a particular people, or his help on a particular occasion. The Great Games might be brought under this head for convenience' sake, though their origin is not beyond dispute.

(3) *Feasts of heroes and under-world powers generally.*—This is closely connected with (1), but again the view-point is different; the earth-power is worshipped, not so much as making the soil bring forth fruits, but rather as influencing the fate of the dead. The few mournful rites which are recorded are mostly included here.

(4) *Orgiastic ceremonies.*—Most, if not all, of these are foreign. The most important are the Bacchic rites, which come from Thrace. The Orphic worship, which springs from them, cannot be considered here.

I. Agricultural festivals.—The earliest and simplest form of these festivals is nothing more than vegetation-magic, originally without reference to a god at all. Athens celebrated, side by side with festivals of a more civilized type, two curiously archaic ceremonies, the Thesmophoria and the Skirophoria. In classical times they were taken under the protection of State-deities;[4] but we can still see the old magic preserved where it would be risking too much to let any ancient ceremony go, and preserved also by the conservatism of the women, the natural tillers of the soil and workers of earth-magic; for, as they know how to bear children, they can induce the earth to do likewise. γαῖα φίλη, τέκε καὶ σύ· τεαὶ δ' ὠδῖνες ἐλαφραί[1] is in effect what the women of all primitive peoples have always said—since before Rhea bare Zeus.

The *Thesmophoria* was in Pyanepsion (October), and was celebrated by the women alone, and in secret,[2] on the Pnyx. Our accounts, the chief of which is a scholiast on Lucian, *Dial. Meret.*, are vague, and overlaid with mythological interpretations; but this much can be gathered. Into certain chasms (μέγαρα) pigs were thrown,[3] and left to rot and be devoured by the snakes who lived there; and the remains—of last year's pigs, apparently—were taken up by women who had been purified for three days and were called ἀντλήριαι, 'drawers-up.' They were then placed upon an altar, 'and they believe,' says the scholiast, 'that whoever takes some, and mixes it with the seed he sows, will have a good crop.' Here we have a wide-spread form of vegetation-ritual—the preparation of a kind of manure, intended to act, not as ordinary manure does, as the σκίρα, or white earth, was perhaps supposed to do later on in the Skirophoria, but by virtue of its *mana*, due partly to the prolific nature of the pig, partly, it may be, to the influence of the serpents, the regular *avatar* of chthonian powers. The festival lasted three days, which seem to have been called ἄνοδος καὶ κάθοδος, νηστεία, and καλλιγένεια.

In connexion with the corresponding summer festival, the *Skirophoria*, we get the strange rite of the *Arrhephoria*, a word of somewhat doubtful meaning, but probably implying 'the carrying of male things.' In this, little girls—so young that their chastity was absolutely indubitable—prepared by a year's residence on the Acropolis, were given, at night, certain sacred objects, which they carried by a natural underground descent to the temple of Aphrodite in the Gardens; and thence they returned, with certain other covered objects which the priestess gave them. These objects were, no doubt, fertility charms of some sort, probably phallic, and their covering, together with the virginity of their bearers, acted as a sort of non-conductor, and prevented their virtue from being wasted. Here we get all the elements of agricultural ritual, the use of objects having great and mysterious *mana*, and the importance attached to virginity, a state whose magical potency is matched only by pregnancy.

Equally primitive, in part at least of their rites, are two festivals of the god whose name we naturally associate with advanced Hellenic culture—Apollo. These are the Spartan *Karneia* and the Athenian *Thargelia*. In the former we have clear indications of a vintage festival[4] of a sort practised all over Europe, and still surviving in places.

'A certain functionary was decked with garlands, and, after praying for blessings on the city, started off running, pursued by certain young men who must be unmarried and who were called σταφυλοδρόμοι or 'grape-cluster-runners'; if they caught him, it was a good omen for the State, but bad if they failed.'[5]

The Thargelia, in the month Thargelion = May, furnishes us with an example of a still more primitive form of the same rite. The functionary in the Karneia—no doubt an embodiment of the

[1] The works to which an asterisk is prefixed are of primary importance.

[3] The writer is indebted for much of his information here to Dr. Simos Menardos, Lecturer in Byzantine and Modern Greek at Oxford.

[4] See Aristoph. *Thesm.* 295.

[1] Callimachus, *ad Iovem*, 29.

[2] Cf. Aristoph. *Thesm.*, *passim*. For numerous examples of non-Attic Thesmophoria, and an account of their ritual, see Nils. 313 ff. It is one of the few feasts with distinctly mournful acts occurring in them—fasting, sitting on the ground, etc. These are probably vegetation-magic (Nils. 318).

[3] Harr. 120 ff.

[4] The *Karneia* was in the month Karneios = Metageitnion = August, roughly.

[5] Farn. iv. 259 f. For numerous examples of this sort of ritual, see Frazer, *GB*[3], pt. v.; and, for the dressed-up functionary, cf. the English Jack-in-the-Green.

vegetation-spirit—was merely pursued and caught, to get his fructifying power for the Spartan vineyards. The *pharmakoi* in the Thargelia were, some authorities inform us, actually put to death. Our chief authority, Tsetzes (*Hist.* 23, 726–756), assures us that a man selected for his ngliness was led ont to sacrifice (*τῶν πάντων ἀμορφώτατον ἦγον ὡς πρὸς θυσίαν*), and after several rites, intended, obviously, to indicate his connexion with a fertilizing vegetation-power,[1] was burned and his ashes 'scattered to the sea and the winds as a purification of the tainted city.' Harpocration adds that this was done at the Thargelia, and not merely, as Tsetzes says, 'if disaster, by the wrath of heaven, overtook a city.' The intention is obvious: the *pharmakoi* are at one and the same time incarnate vegetation-deities and scapegoats. On both counts, of course, they are liable to be put to death—in the one case, to prevent their powers from waning and give them an opportunity to be re-incarnated, and, in the other, to get utterly rid of them and of the sins with which they are laden.

But they were certainly not actually put to death in civilized Athens. On human sacrifice the Greeks of historical times looked with loathing and abhorrence even keener than ours, because they were nearer to it—just as the N. Amer. Indians, some of whom at least were once ritual cannibals, regard as permanently infamous any of their number whom hunger has driven to such a terrible resource.[2] Yet no enemy of Athens ever accuses her of so awful a practice; Athenians, and notably the author of the *Minos*, are as emphatic as any one in denouncing it; and our anthorities for the practice are late and doubtful.[3] Finally, the Thargelia was a festival of Apollo, and there is good reason to believe that not even the righteous execution of a condemned criminal was allowed to sully its purity. The killing of the *pharmakoi* can have been only a form; but no doubt, in earlier times or among more backward sections of the Greek world, it was real. At any rate, it was part of a great ceremony of purification, preparatory to getting in the harvest, of the same culture-stratum as the fertilizing rites of the Thesmophoria and Arrhephoria. Apollo's connexion with it is not very clear; probably in his character of a god of harvest[4] he took over an older ceremonial.

Of especial interest to us, particularly from a literary point of view, are those mimetic vegetation-rites connected with the name of *Dionysos*—the dances and mummings of the 'goat-men,' which ultimately led up to Tragedy[5] and Comedy. In these and many other ceremonies it is not primarily Dionysos the wine-god who is worshipped (a wine-deity pure and simple would hardly *exclude* wine from some of his offerings, as Dionysos did), but rather Dionysos the god of fertility in general, and especially the fertility of the fields. In Thrace there survives to this day[6] a curious ritual in which we get both *phalloi*, reminding us of the phallic choruses out of which, says Aristotle, Comedy sprang, and a masque of men dressed in goat-skins, which provides at last the needed link between *τράγος* and *τραγῳδία* and helps to sweep away various absurd etymologies.[7] For this masque is 'tragic,' and turns on the death of one of the characters—no doubt in old times Dionysos himself. It is well known that nothing is more common than the death, followed by the resurrection, of a vegetation-god; Adonis, Osiris, Dionysos, Balder, all come under this head—the good god who is slain by Winter or the Storm, and generally returns again in the spring. No festival of Dionysos comes in the summer; he is worshipped in spring and autumn. His three Attic feasts were in Poseideon = December (Rural Dionysia), Gamelion = January (Lenaia), and Elaphebolion = March (Greater or City Dionysia), and he is also connected with the 'Feast of All Souls' (*Ἀνθεστήρια*) in Anthesterion = February. Counting the Rural Dionysia and Lenaia as merely two forms of the same festival, we get the three feasts just about where we should expect them in the case of an agricultural deity: one at the time of new wine (Anthesteria), one in full spring (Great Dionysia), and one (Lenaia) to arouse the sleeping vegetation-power in winter. He has no Attic festival, however, in Pyanopsion (October), its place being taken by the older ceremonies already described. Roughly, then, we get ancient agrarian festivals answering in date to Easter, St. Demetrius' day,[1] and Christmas in Modern Greece, while the Anthesteria contains elements of something like Lenten observances.[2] It is a fresh example of the Church's marvellous and far-sighted power of adaptation in making her great feasts come at times of the year already consecrated, in the minds of the common people, by the existence of similar pagan festivals.

But we must pass to a brief discussion of the nature of the two great Athenian feasts, the Lenaia and the Greater Dionysia. In these little is left of the simple and primitive Nature-cult, either on its quasi-magical or on its orgiastic side (to be considered later). The former festival consisted (1) of a procession, managed by the king-archon and certain assistants (*ἐπιμεληταί*) chosen from the sacred *gentes* of the Eumolpidai and Kerykes; (2) of a contest of lyric and dramatic poetry, managed by the king-archon alone.[3] Only the contest (*ἀγών*) is important, for it was at this that many of the great dramatic works were produced. In this connexion, it cannot be too carefully kept in mind that the plays were all religious, at least in theory, and that going to see them was an act of worship. A devout Greek did not go to the theatre to see a play of Sophocles or Aristophanes merely because he found it amusing or moving, any more than a devout Florentine goes to Santissima Annunziata on Easter morning merely because the singing is good. Of course, æsthetic enjoyment played its part, as it generally does—the people who built the Parthenon or Cologne Cathedral were moved by a love of beauty as well as religious zeal,—but, in its essence, the State's action in appointing *choregoi*, the *choregos'* fitting out and training his chorus, the dramatist's composition of the tragedy or comedy, and the spectator's presence in the theatre were all parts of the public and private religious duty of Athens and her citizens. It is so long since we have had any such union between Church and State that we are apt to forget that there was a time when the miracle-play was almost as much a part of the service, at some times of the year, as the *Kyrie* or the *Te Deum*. The tragedies, as has already been indicated, are the glorified form of old peasant miracle-plays, very like our own May-day and Christmas mummings in general appearance, representing the contest between the two champions and the death of one of them.[4] Rather harder to

[4] Ridgeway, *Origin o Tragedy*, Camb. 1910, takes a different view.

explain is the Old Comedy, with its railing and satire, its wild fun and buffoonery, and its frequent coarseness. Yet this is explicable enough as a survival, and not merely a survival—for the ideas were still alive in Greece—of old notions connected with fertility, magic, and good-luck charms. We have countless examples, many of them Greek, of peasant merry-makings, with their attendant broad fun at the expense of all and sundry, the ancient 'jests from the waggon'; and we shall have occasion to see, later on, that in the highly-developed worship of Demeter and Kore one characteristic of these was still carefully preserved—their deliberate coarseness. The *phallos*, as has already been mentioned, was used in these primitive rites as a symbol of fertility. It had its verbal equivalent—designedly coarse and foul jests. These were no mere wantonness—we hear of respectable women ceremonially using them—but part of the fertility-charm. As to the continual railing against individuals, that may be serious enough sometimes in Aristophanes, but in its ultimate origin it was as often as not a mere method of averting the evil eye; just as a street-boy spits on a new-found coin 'for luck'—really to show, or pretend to show, his contempt for it, and so avoid nemesis. We can now understand why Aristophanes dares to rail against Dionysos himself, painting him as fool, coward, effeminate, and incontinent. It is really (though whether Aristophanes fully realized this is doubtful) a pious mode of address—an averting from the god of any possible φθόνος. Dionysos, though he could be very terrible, was a friendly god who came close to his worshippers in their feastings; and extreme reverence for the beings he worshipped was not a characteristic of the Greek.[1] Cf. artt. DRAMA and DRAMA (Greek).

So much for the spirit of the plays. The details of their production are fully discussed in well-known books, such as Haigh's *Attic Theatre*, Oxford, 1889, and need not be entered into here, any more than the vexed question of stage or no stage. These points have absolutely no bearing on the religious side of the question. It should, however, be noted—what Dörpfeldt has overlooked—that whether his discovery of the precinct ἐν Λίμναις and of the wine-press be all he claims for it or not, the name Ληναῖος has nothing to do with ληνός, 'a wine-vat,' which would give Ληνεῖος, but must come from Λῆναι, an old word for 'Maenads,' and signify 'god of the Bacchantes.'[2] The feast itself, however, has nothing of the orgiastic character which the name might imply.

The chief occasion for the production of plays was the Great or City Dionysia, in Elaphebolion. This began, on the 8th, with a προαγών, including lyric performances—no doubt, as in the Lenaia, dithyrambs, the form from which Tragedy is said to have been evolved—and offerings to Asklepios. The feast proper began, as we gather from Pausanias (I. xxix. 2 and other passages), with a solemn procession, in which the sacred cult-statue of Dionysos of Eleutherai was carried to the precinct of Artemis 'Best and Fairest' near the Academy. In this *kanephoroi*, or girls carrying baskets containing sacred emblems—probably of a similar nature to those borne by the *arrhephoroi*—took part, as also did dancing and singing boys. A phallic procession is also mentioned.[1] Next—perhaps on the 10th and following days—came the dramatic contests in the great theatre of Dionysos on the slope of the Akropolis. Here there assembled, not only the Athenians themselves, as at the Lenaia,[2] but also representatives from all over the Empire, and from foreign States. This was the occasion on which most of the new tragedies were produced; indeed, 'at the new tragedies' (καιναῖς τραγῳδίαις) is sometimes used to mean 'at the City Dionysia.' We hear, nevertheless, of new tragedies being produced even at the minor Peiraic Dionysia; and Aristophanes'[2] frequent references to the Lenaia show that he often produced a new play then, as was natural, since so much of his humour is topical and local.

The most discussed of all these agricultural and quasi-agricultural festivals are the two held yearly in Attica in honour of Demeter and Kore, *the Lesser and Greater Mysteries.* A good deal is known of the external ritual of these great ceremonies (τὰ φανερῶς δρώμενα), but exactly what was taught, or whether anything at all was taught, has been a much-disputed point, ever since Lobeck's learning and common sense cleared away the absurd theories of earlier speculators (*Aglaophamus*, pt. i.).

The Lesser Mysteries took place in Anthesterion, probably about the 20th,[3] at Agra, or Agrai, on the Ilissus. Here, as in the Greater Mysteries, a 'truce of God' was proclaimed throughout Greece, to allow would-be initiates to come to Athens unmolested. We know, unfortunately, next to nothing about the rites, except that they must have been simple, as there was no temple of Demeter, so far as we know, at Agrai, and consequently no place for elaborate δρώμενα to take place.[4] The important thing is that the candidate who had been initiated in these mysteries became a μύστης, and was entitled to admission to the Greater Mysteries the next year but one.

The Greater Mysteries were held in Boedromion,[5] the truce lasting from the full moon of Metageitnion to Pyanopsion 10. They began, it would seem, on the 13th, with a procession of the Athenian *epheboi* to Eleusis to get τὰ ἱερά, certain sacred objects of which we know little, but which probably included ancient and peculiarly holy cult-statues of the two goddesses. They returned the next day. Then on the 15th came the ἀγυρμός, or assemblage of the candidates, who on the next day were solemnly addressed by the king-archon, the hierophant, and *daduchoi*, at the Stoa Poikile. All who were guilty of certain ritual impurities (such as the eating of forbidden foods), all who were unable to understand Greek, all who had been deprived of civic rights, and other disqualified persons, were warned away. What this speech was like one can gather from Aristophanes' parody of it (*Ran.* 354 ff.).

'Let every one stand aside
Who owns an intellect muddled with sins, or in arts like these untried;
If the mystic rites of the Muses true he has never seen or sung,
If he never the magical music knew of Cratinus the Bull-eater's tongue.
. . . .
Behold, I give word; and again give word; and give word for the third, last time;
Make room, all such.'[6]

[1] Nor always of mediæval Europe; cf. the following lines from a French mystery-play on the Crucifixion:

'Père éternel, lève-toi! n'as-tu pas vergogne?
Ton Filz est mort, et tu dors comme ung ivrogne!'

This is quite as far removed from the *Dies Iræ* as Xanthias'

ὦ χρυσοῖ θεοὶ
ἐνταῦθ' ἔχεις τὴν καρδίαν;

from the songs of the Initiated in the *Ranæ*. So Bhagavati is elaborately insulted at her great spring-festival at Cranganore (see *GB*[2], pt. i. vol. i. p. 280).

[2] Farn. v. 208; Nils. 276, who aptly compares ληναγέτης. Mommsen and Miss Harrison support the contrary view.

[1] *CIA* i. 31. See Mom. 435 ff., for a detailed account.

[2] Aristoph. *Ach.* 503 ff. This indicates that *The Acharnians* was produced at the Lenaia, but *The Babylonians* at the Greater Dionysia.

[3] Mom., chapter on 'Kleine Mysterien.' The month is furnished by Plutarch, *Demetrius*, 26; the duration of the truce (full-moon of Gamelion-Elaphebolion 10) indicates the 20th as a likely date.

[4] Farn. iii. 169 for the few facts that are known.

[6] Murray's translation.

Next followed the rite which gave the day its name, ἅλαδε μύσται, 'To the sea, ye *mystai*!' The whole body of the initiate went down to Phaleron, washed themselves in the sea, and also washed their pigs. For in this, as in all rites of a chthonian nature, the pig was a recognized means of purification, generally by means of its blood. Exactly how the animals were used on this occasion we do not know; *Ran.* 338 strongly suggests that they formed the material for some kind of sacrificial feast.

Then followed certain rites of which little is known. On the 17th we hear of a sacrifice of a sucking-pig to Demeter and Kore.[1] On the 18th (?) there was a procession in honour of Asklepios, probably identical with the Epidauria which Philostratos mentions (*Vit. Apoll. Tyan.* iv. 18).[2] On the 19th, late in the day, so as to last well into the night, and therefore, by Greek reckoning, into the 20th, came the great Iakchos-procession to Eleusis, visiting various holy places *en route*, and stopping at a certain bridge[3] over the Cephissos for the rough jesting which, we have already seen, is associated with agricultural rites.[4] Here we have to notice the presence of Iakchos-Dionysos in this festival of Demeter and her daughter. Our earliest document, the Homeric Hymn to Demeter (? 7th cent.), knows nothing of him. Probably, after the Dionysiac cult was imported from Thrace, with the Delphic oracle acting as its vigorous missionary and supporter, Dionysos was simply added to the Eleusinian deities, whom he resembled in many ways.

Arrived at Eleusis, no doubt after a rest—for the journey of some 15 miles, made fasting, with incidental dancing and singing, must have been extraordinarily fatiguing—the *mystai* proceeded to the rites of initiation, perhaps on the nights of the 20th and 21st. Concerning these we know, briefly, the following facts. Firstly, they were connected with the legend of the rape of Persephone, the grief-stricken search of Demeter, her arrival at Eleusis, the gift of corn, and the recovery of her daughter. Secondly, we gather that some part at least of all this was enacted in a sort of mystery-play at the *telesterion*, or Hall of Initiation.[5] That there was also a ἱερὸς γάμος, or mystic marriage ceremony; that at a certain point in the rites the hierophant cried aloud, 'Our Lady Brimo hath borne a holy child Brimos'; that there was some sort of representation of the terrors of the under world—are the vague statements of late authors; and, though quite possibly true for some ritual or other, have not necessarily anything at all to do, really, with Eleusis. One fact, however, we do know, that at the climax of the rites certain 'holy things' were shown. Here again we are in ignorance of what they were.

We know a little about what was *said*—a less important matter than what was *done*. We hear of a sacred formula, ὕε κύε, 'Rain (O Sky), conceive (O Earth),' used by the hierophant—a rain-charm, apparently, belonging to the oldest stratum of the rites; of the mystic formulæ (passwords [?]) employed by the initiate; but exactly what it all meant is unknown. The secret was well kept.

Perhaps the fact is that there was no secret—at least no secret *doctrine*. The glow of ecstasy with which many writers, especially Neo-Platonists, speak of the experiences of the *mystai* does not, even if taken literally, compel us to suppose any notable increase in knowledge. It is rather a heightening of religious emotion, and a feeling of having joined the ranks of the elect. 'Bad have I fled, better have I found,' says one of the formulæ. Something in the rites—perhaps a sort of communion-service[1]—may have induced a feeling of unity with Demeter and Kore, and with the male objects of the worship, Hades-Pluton, Eubuleus, Triptolemos, Iakchos. More than this we cannot say. If there had been any tangible doctrine, it is unthinkable that nothing should have leaked out, when practically any one could be initiated; and the official initiators, hierophant, *daduchos hierokeryx*, etc., were not men of any special training, but simply members of certain old priestly families who possessed traditional knowledge of the rites. We do not hear, in Greece, of a priestly caste claiming vast superiority in religious knowledge over the laity. There were, of course, certain things about the gods which only their priests and priestesses knew; but no mysterious powers or wisdom resulted from them to the priests themselves. They were simply things which must not be noised abroad, for fear some hostile person should make a bad use of them. Euthyphron might try to impress Socrates by claiming to be able to tell him many very extraordinary things about the gods; but neither Socrates nor any one else seems to have been much impressed by these claims.

2. National and commemorative festivals.—These were very numerous. They were held with a definite purpose, usually to honour a national deity, or to return thanks for a particular service. Being frequently rather elaborate and expensive, they were often pentaeteric or quadrennial. We may sub-divide them thus: (*a*) festivals simply in honour of the god or goddess of a State; (*b*) international or pan-Hellenic festivals of a similar kind; (*c*) festivals of purification, associated with a ritual legend and purporting to be a representation of the deity's experiences; (*d*) feasts of thanksgiving for victories, etc.

Of (*a*) a good example is furnished by the great pentaeteric festival at Athens, the *Panathenaia*.[2] This occurred towards the end of Hekatombaion, in the height of summer, the chief day being the 28th of the month—τρίτῃ φθίνοντος, 3 being Athene's number. The orientation of the Parthenon is so calculated as to allow the rising sun to shine full in through the door on this day, in the year of the temple's completion, 458 B.C. This feast was the celebration of the might of Athens and her power over lesser States—for all the allies were expected to send contributions to it—and of the might of her patron-goddess. It consisted of a series of contests such as a goddess of the arts and of war might be expected to delight in. First came an ἀγὼν μουσικῆς, or contest of singing, instrumental music, and, at least in the days of Peisistratos, recitations from Homer. Next came a gymnastic contest (lasting 2 days), originally held near the Piræus, but later (4th cent.) in the present Stadion. The prizes for this consisted of jars of oil, originally at least the product of the μορίαι, or sacred olives of the goddess. There were two prizes for each contest, the second being ⅕ of the first; *e.g.* the winner in the boys' *pankration* received 40 jars of oil, the 'runner-up' 8. The contests were of the usual nature—foot-racing, boxing, wrestling, etc. Next came the ἀγὼν ἱππικός—horse-racing of various kinds; then certain minor contests—a pyrrhic dance, an *euandria*, or parade of crack troops, and a torch-light procession—all competitive, each

[1] *CIG* 523; *Berliner Klassikertexte*, pt. 5, 1st half, p. 10, provides us with an interesting, though very fragmentary, mythological explanation of the connexion between pigs and Kore.

[2] Farn. iii. 171 ff.

[3] The modern Kolokythou, approximately; about half an hour from the Dipylon Gate.

[4] The procession probably started from the Agora (*Ran.* 320, reading δι' ἀγορᾶς for Διαγόρας). For jesting (γεφυρισμός), cf. *Ran.* 420 ff.

[5] The small extent of this hall, whose foundations are now completely laid bare at Eleusis, proves that there can have been no very elaborate spectacular performance, and indeed makes it hard to understand how the numerous μύσται can have got in at all.

[1] Farn. iii. 185 ff.

[2] See E. Gardner, *Gr. Athletic Fest.*, p. 227 f., and, for more details, *JHS* xxxii. pt. i. p. 179 f.

tribe entering. There was also an all-night festival (*pannychis*), mentioned by Euripides (*Herakl.* 777–783) and other authorities; and, on the principal day of the feast, an elaborate procession, bringing the city's tribute to the goddess—the richly embroidered robe (*πέπλος*) on which was represented her triumph over the giants. Here, in the midst of this civilized ritual, we get a touch of primitive feeling; the statue of the goddess needs clothing, just as at another period of the year it needed to be taken down to the sea and washed, while the temple was undergoing a house-cleaning process (*Plynteria* and *Kallynteria*). The festival ended with a regatta in the harbour.[1]

(*b*) The great *games at Olympia* and elsewhere were not very different from the gymnastic part of the Panathenaia, which they no doubt suggested. Existing nominally to do honour to Zeus, Poseidon, etc., it is at least possible that they originated from the funeral games of buried heroes. However this may be, and whatever be the origin of the games (Olympian chronology is very uncertain, the list of victors compiled by Hippias of Elis being criticized as early as Plutarch's time), in the 5th and 4th centuries their importance can hardly be exaggerated. They were pan-Hellenic; a truce similar to that proclaimed by Athens before the Mysteries protected all visitors; and all Greece was ready to punish those who dared to violate it. Any one who could satisfy the board of judges that he was of pure Greek blood, and not of a city under a curse, that he was free from crime and impiety, and that he had trained for the past 10 months was entitled to enter. This meant that all Greece proper, Ionia, Sicily, Magna Græcia, and the colonies scattered over the Mediterranean sent representatives to Olympia at least, if not to the other great games. The programme—originally 1 day only—lasted 3 days in later times, and consisted of long and short distance foot-races, races in armour, boxing, wrestling, the *pankration*, and an 'all-round' contest, the *pentathlon*—jumping, running, discus-throwing, javelin-throwing, wrestling—besides the great chariot- and horseback-races. It was to celebrate victories of athletes that the greatest lyric poets wrote, and the victor received almost divine honours from his city. Moreover, no place was so good as one of these great athletic meetings to hear all the latest news, see every one worth seeing, and listen to the latest poets, sophists, or historians. Thus, even where no actual 'musical' contests existed, the games fostered art and literature, as well as the pan-Hellenic spirit, indirectly at least.[2]

(*c*) The best example, perhaps, of this is the great Apolline festival of the *Stepteria*. This was held at Delphi every ninth year (*i.e.* once in each *oktaeteris*), and was supposed to commemorate Apollo's slaying of Python, his flight and exile, and his purification and return.[3] A boy of good family—obviously representing the god—was escorted, along with certain other boys, by torch-bearing women (*oleiai*) to a wooden hut built to represent a palace (the 'abode of Python'). This was set fire to, and the table in it was overturned. Then the boy pretended to go into exile; finally all went—not in mimicry but in actual fact—to Tempe, were purified with laurel, crowned themselves with it, and returned by the sacred Pythian way,[4] entering Delphi in triumph. Here we have a good example of a rite giving rise to an ætiological myth. For, assuming the Apollo-Python story as a basis, why should we have a palace—which serpents do not usually inhabit—and why is it elaborately destroyed, furniture and all? Whereas, starting from the ceremony, it is all plain enough. The boys, headed by the incarnate god, get rid of any miasma they may have, in the 'palace,' which is then disinfected by burning.[1] They then go away, possibly bearing the sins of the people with them, and, instead of negatively purging only, they come back after their purification, radiating purity from themselves and their crowns. This example will suffice to show, in an interesting case, the way in which rites really 'agricultural,' purificatory, or the like, came to be interpreted, *via* ætiology, as purely or chiefly 'commemorative.'

(*d*) The feasts of thanksgiving for victories, etc., form a fairly numerous class, but of no special importance. The best-known instance is the *Marathonia* at Athens, with its annual sacrifice of 500 goats to Artemis Agrotera, in composition for the rash vow to give her a goat for every slain Persian. It occurred in Boedromion, on the 6th according to Plutarch (*de Glor. Ath.* 7). The date is no doubt determined, not by the actual day on which the battle was fought—this was nearer the middle of the month—but by the fact that it is Artemis' day.

3. Feasts of heroes and under-world powers generally.—Chthonian rites, as these are generally called, may be distinguished from Olympian worship by the following characteristics. (*a*) Their object is not so much to please the power addressed, and secure its favour, as to induce it to go away or to remain quiescent; the cult is *ἀποτροπή*, not *θεραπεία*.[2] (*b*) Sacrifices (*ἐναγίσματα*, not *ἱερά*) are given entirely, not shared—are burned, poured into holes in the ground, thrown into the sea, etc. The altar is not called *βωμός* but *ἐσχάρα*, a sort of hearth such as was often placed above or before a tomb for funeral offerings. (*c*) Night rather than day is the time chosen for the ritual. (*d*) The powers invoked, though often called by divine names, are generally seen on examination to be heroic rather than divine. (*e*) When combined with Olympian ritual, these powers are honoured with a subordinate, but quite distinct, ceremonial. Of course, one must except from these general rules a few figures which, though chthonian, are in some sense Olympian. Hermes Χθόνιος, for instance, is invoked by the returning Orestes to help and save;[3] Hades-Pluton is no ordinary under-world power, but the great death-god of an advanced race; and Zeus Χθόνιος is regarded as in some way the same as Zeus Ὀλύμπιος or Ὕψιστος. But of the great mass of chthonians all or most of these rules hold good. It should be added that most of them are nameless, and described by adjectives only. Thus we hear of 'the Kindly Goddesses' (Εὐμενίδες), 'the Reverend Ones' (Σεμναί), 'the Easy-to-be-entreated' (Μειλίχιος); and, over and over again, simply of 'the hero.' Even the name Ἀΐδης or Ἅιδης is adjectival = 'the Invisible One,' while Pluton = 'the Rich One.'

The explanation which the present writer considers the most likely is that most of these beings are, like Mycerinus' deities, 'not gods but ghosts.' This is obvious in the case of heroes; they are simply the buried men living in some vague way underground or in their graves—a notion as widespread as it is primitive. It is less certain in the case of many others. For instance, the Erinyes may be variously explained. Are they embodied curses, or the angry ghosts of murdered and unavenged men? Again, who are the Eumenides, with whom the Erinyes are commonly but wrongly

[1] See Mom. for full particulars as to dates, etc.

[3] Farn. iv. 293 ff.
[4] *Ib.* 103 ff.

[1] It should be remembered that the primitive mind looks upon moral evil of all sorts much as we regard the bacilli of a disease, as something contagious, and to be got rid of by the action of fire and of certain medicinal substances, and that this idea persists into quite late times, in a more or less unconscious form.

identified? Though powers to be feared, their functions are kindly enough; they give fertility and general good fortune. (See EUMENIDES.) Did Demeter and Kore develop out of some such figures? Are the winds ghosts or elemental powers? These are questions easy to ask and hard to answer. We think, however, that the close resemblance between the worship of heroes and the worship of other chthonian powers makes the ghost-theory a likely one. But this is not the place to discuss so wide a subject, and we shall merely notice a few typical pieces of ritual in which these powers receive honour.

(1) *Actual offerings to the dead, or to some particular dead persons.*—We find a good example of this at Platæa, where, under the title of οἱ ἥρωες, those who fell in the great battle received offerings —a black steer, wine, milk, oil, unguents[1]—every year on the 6th of Alalkomenios = Maimakterion.

(2) *Worship of heroes in conjunction with Olympians.*—Here a good example is afforded by the ritual of the Hyakinthia at Amyklai. This festival, held in the month corresponding to Hekatombaion, divides sharply into two parts—the one mournful, involving abstinence from cereal food, banqueters ungarlanded, etc.; and the other joyous, with music and other rites such as one associates with Apollo, whose feast it is.[2] The reason is clear. Apollo's ritual has been superimposed upon that of an old chthonian power Hyakinthos, who, being dead (permanently, as a hero, or temporarily, as a vegetation-god), is naturally mourned for; his festival, as he has something to do with harvest, contains the not uncommon tabu on cereals before the harvest begins.

(3) *Heroes and other chthonians with the names of Olympians.* — This does not include genuine Olympians such as Hermes; but it does, on the one hand, include the purely heroic Zeus-Agamemnon, where 'Zeus' is almost an adjective, and, on the other, the Zeus worshipped at the Diasia—Zeus Meilichios.[3] Here the ritual is chthonian; the object of worship is often represented as a snake—a regular chthonian form—yet he is called 'Zeus the Easy-to-be-entreated.' To the present writer this proves, with some approach to conclusiveness, that the powerful Olympian has been superimposed upon a local chthonian god—or ghost, it makes little difference—to such an extent as to blot out his personality, such as it was, and leave merely the gloomy, chthonian nature of certain of the rites; just as a little later in the same month (Anthesterion) Dionysos' vigorous personality all but effaces the ancient All-Souls' festival of Χόες, which still betrays itself, however, in certain points of the ritual.

(4) Finally, we must not omit an important class of chthonian rites, namely, *cursing*. Every Greek city had its Commination Service, and the powers who fulfilled the curse would naturally be chthonian —the Erinyes, for example. One of the best-known of these solemn curses is the so-called 'Dirae of Teos,'[4] with its litany-like refrain of 'May he perish, both himself and his kin' (κεῖνον ἀπόλλυσθαι καὶ γένος τὸ κείνου), while we know, from the parody in Aristoph. *Thesm.* 335 ff., the nature of the curse uttered by every Athenian archon and by the herald at the beginning of each ecclesia.[5]

4. Orgiastic ceremonies.—These, though foreign and never germane to Greece, deserve a word of mention, because they are associated with the great name of Dionysos. This is not the place for a detailed account of them; but it may be said that they rest on a basis quite different from the calm ritual of ordinary Greek worship. Instead of a simple sacrificial meal shared with the god, the key-note of an ordinary Olympian ceremony, or even a quasi-magic rite, such as we have seen surviving in the Thesmophoria, orgiastic religions seek for a mystical union of the worshipper with the object of his worship—either by means of a kind of religious mania or self-hypnotism, induced by wild dancing and the like, or by a sacramental devouring of some animal believed to be the incarnation of the god. This, in the case of Dionysos, was generally a bull or a calf. He himself is hailed as a 'noble bull' in the Elean song preserved in Plut. *Quæst. Græc.* 299 B, and often represented as horned or tauromorphic. But this was really a Thraco-Phrygian worship, and in Greece proper Dionysos was usually the recipient of a more sober and ordinary cult.[1] Of his share in the Mysteries we have already written.

In connexion with orgiastic and enthusiastic worship in general, the frenzy of prophets, and especially of the Pythia at Delphi, may be noticed. Here we have a curious bit of savagery, for it is simply the temporary 'possession' of the shaman by his god, surviving in the most orderly and most thoroughly Hellenic of all cults. The explanation perhaps lies in the fact that Delphi had been a mantic shrine before the coming of Apollo; and that certain traces of an older and cruder worship were not to be eradicated. At any rate, the actual givers of oracles were the official 'interpreters' of the priestess's inspired ravings, and not she herself, as she was in all probability totally unintelligible.[2]

Summary.—The variety of cults mentioned in this art. may perhaps give a wrong impression of the general nature of Greek worship. We close, therefore, by insisting on the fact that the average Greek ceremony, the sort performed by the ordinary worshipper nine times out of ten, was neither orgiastic, chthonian, nor magical, but consisted simply in a sacrifice, partly sublimated by burning, so as to reach the celestial abode of the gods, partly eaten by the sacrificer and his fellow-worshippers. This, from Homeric times onward, was the normal expression of Greek piety. In the following ecclesiastical calendar, so to call it, of Athens, the preponderance of such feasts may be seen at a glance—'O.' indicating a festival of any sort in honour of an Olympian, 'Ch.' a chthonian or a hero-feast, 'O.-Ch.' one combining both elements.

THE ECCLESIASTICAL YEAR AT ATHENS (the dates of the festivals are from Mommsen, to whom the reader is referred).

HEKATOMBAION.

12 Kronia (O.).
16 Synoikia (in commemoration of the συνοικισμός under Theseus) (? Ch.).

20–23 Musical *agôn*. 24–25 Gymnastic *agôn*. 26 Equestrian *agôn*. 27 Pyrrhic and *euandria*. 28 Torchlight procession, παννυχίς, procession, sacrifice, and feast. 29 Regatta.	Panathenaia (O.); pentaeteric. Lesser Pan. (yearly) at same date.

METAGEITNION.

Herakleia in Kynosarges (? O.).
Panhellenia (O.).
(Dates uncertain.)

BOEDROMION.

3 Anniversary of Platæa (? O.).
? Genesia (? = Nemeseia) (Ch.).
6 Marathonia (O.).
12 Charisteria (thanksgiving for the overthrow of the Thirty Tyrants; O.).
? Eleusinia (gymnastic *agôn*; O.).

FESTIVALS AND FASTS (Hebrew).—I. *PERIODICAL FESTIVALS.*

—i. WEEKLY.—The Sabbath.—From probably an early period every 7th day was observed as the holy day of rest. Since the *šabattu* is described in the cuneiform inscriptions as 'a day of rest for the soul,'[3] Sayce (*Higher Crit. and Mon.*[3], London, 1894, p. 74) argues for a Bab. origin, and compares it with the observance of the 7th, 14th, 21st, 28th days, as days on which it was unlawful to do certain kinds of work. But the Jewish observance of the Sabbath was of a very different kind from that of the ancient Babylonians.

The earliest historical reference to the Sabbath in the Bible is 2 K $4^{22.23}$, but the language used suggests that its observance was a long established custom. The fact that at different times different explanations of it are given points in the same direction. In Ex 23^{12b} (E), Dt 5^{14b} (probably derived from JE), the purpose is that all may rest, including the slaves, the stranger, and the animals, as well as the master and the family. In Dt 5^{15} the reason assigned by D is that it is a memorial of the Exodus, which it seems to assume took place on that day. In Gn 2^{1-3}, Ex 20^{11}, the reason assigned is the Sabbath rest of God on the 7th day, after the 6 days' work of creation. In theory, at any rate, the prohibition of work, even in the earliest laws on the subject (Ex 20^{10} 23^{12}), was absolute. But the only evidence of the extremely literal and rigid observance of this rule belongs to the age of the Priestly Code, in which the reason which had come to be assigned for its observance gave it a more sacred and binding character. Thus the manna might not, and indeed could not, be gathered on the Sabbath (Ex 16^{22-30}); a man is stoned to death for collecting sticks on that day (Nu 15^{32-36}). Nehemiah makes very stringent provision against violating the Sabbath by trading, etc., on it (Neh 13^{15-22}). On the Sabbath two lambs, with the customary meal- and drink-offerings, were sacrificed as a burnt-offering in addition to the daily morning and evening sacrifices (Nu 28^{9-10}).

The extreme minutiæ of detail, the difficulties to which they gave rise, and the ingenious methods of evading them are fully discussed in the Mishnic tract *Shabbath*. They frequently formed the ground of conflict between the Pharisees and Christ, who taught that the Sabbath should be regarded not as a fetish, but as an institution designed for practical benefit to man (Mk 2^{23-28} 3^{1-5}, Lk $6^{1-5.\ 6-11}$ 13^{10-17} 14^{1-6}, Jn $5^{9ff.}$). When synagogues were established, the Sabbath services became an important feature of Judaism. Many of the discourses and acts of healing of Christ took place in connexion with them (Mk 1^{21-28} 3^{1-6} 6^{1-6}, Lk 4^{31-37} 13^{10-17} etc.). St. Paul also frequently made use of the synagogue service in his missionary journeys (Ac $13^{14-43.\ 44-45}$ 14^{1-6} etc.). Parts of the service—notably the lections and discourse which followed (cf. Lk 4^{31-37})—became the model for early Christian worship, and profoundly influenced the history of the Christian liturgies.

It seems likely that the original purpose of the Sabbath was to consecrate every phase of the moon. It may have been derived in the first instance from some form of moon-worship. If so, the purpose was lost sight of when, if not before, a conventional week of 7 days was substituted for the lunar phase (see CALENDAR [Hebrew], § 1).

ii. MONTHLY.—The New Moon.—This is frequently mentioned with the Sabbath, as being both festivals of ordinary occurrence (2 K 4^{22-23}, Am 8^5, Hos 2^{11}, Is 1^{13}), such as, *e.g.*, a devout woman might be expected to attend at some not very distant sanctuary, even though her husband stayed at home (2 K 4^{23}). In early times the New Moon was marked by a sacrificial feast, at which all the household were expected to be present, unless prevented by some ceremonial uncleanness or other religious cause (1 S $20^{5.\ 6.\ 26}$). In the Priestly Code a special offering was made of two young bullocks, one ram, seven lambs, and a goat for a sin-offering (Nu 28^{11-15}). Just as the Sabbath was probably the dedication of each phase, so the New Moon was undoubtedly the consecration of the whole moon or month (see CALENDAR [Hebrew], § 1).

iii. ANNUAL.—These we shall divide into (*a*) those that were certainly pre-exilic, and (*b*) those that were possibly or certainly post-exilic in origin.

(*a*) *Pre-exilic.*—It is not improbable, when every important town had its separate sanctuary, that customs with regard to the festivals, their number and their character, may have varied in different localities. But there is evidence to show that at some sanctuaries, such as Shiloh—probably the most important temple of the early days of Samuel

[1] Evening of the 6th by our reckoning.
[2] Night of the 11th.
[3] The real meaning of the phrase *ûm nûḫ libbi* (II Rawl. 32, l. 16) appears to be a day when the gods rested from their anger (see *HDB* iv. 319ᵃ).

—there was a great annual festival which, if not the only one, was so important as to be regarded as the great yearly sacrifice (1 S 1[7-21] 2[19]), and which all within the district attended, unless hindered for a sufficient reason (1[22]). These chapters, if not contemporary evidence of the state of things in Samuel's time, may at least be regarded as evidence of what was customary at a typical local sanctuary in the time of the early monarchy. With this we may compare the custom of an annual family feast, of which we have evidence in 1 S 20[6. 29], at which the scattered members of the family assembled.

The annual sacrificial feast at Shiloh has been frequently identified with the Feast of Booths at the end of the year. It would probably be more correct to say that the latter was a later development of the annual festival. Jg 21[19-23] (post-exilic but evidently based on earlier documents) certainly supports the view that this annual feast was originally a vintage celebration.

In the earliest legal codes, we find three annual festivals: (1) Unleavened Bread (*Maṣṣôth*), including perhaps Passover (*Pesaḥ*); (2) Weeks (*Sh'bû'ôth*); and (3) Ingathering (*'Asîph*) (Ex 23[16] [E], 34[18. 22-23] [J]). That these were agricultural in origin is evident in the case of the last two, and probable in that of the first.

1. Maṣṣôth.—The meaning of this feast is not given in the early documents (its association with the Exodus being probably an afterthought; see below). In later times it included three rites which appear to have been originally distinct: (1) the Paschal meal, or Passover proper, (2) the seven days' Festival of Unleavened Bread, (3) the wave-offering of the first sheaf (*'ōmer*).

(1) The essential feature of the *Passover* proper was the sacrificial feast of the Paschal lamb. There was a very ancient religious tradition that the firstlings and firstfruits belonged by right to Jahweh (Ex 13[11-13] 22[29-30] 23[19] 34[19-20] [JE]). The tradition that in the last plague the first-born of Egypt had been involuntarily sacrificed to Jahweh (Ex 13[16]), and that the tribe of Levi was consecrated to Him as a tribe to whom the rights of the first-born had been transferred (Nu 3[12-13]), as well as the offering of all firstfruits and firstlings, including the redemption of men and unclean animals by the substitution of a lamb (Ex 13[2. 12-13] etc.), belongs to the same cycle of ideas. What more natural than that the first lambs of the season should be offered to Jahweh? But, as it came to be a matter of importance, with the consolidation of the tribes, that the festival should be observed by all at the same time, the lambs would in due course have ceased to be necessarily the first-born, and the original intention of the feast have been lost sight of, or overshadowed by its connexion with the Exodus. This view of the origin of the Passover is borne out by the analogy of the Feast of Booths which, originally an agricultural feast, came to have an exclusively historical meaning (see below).

(2) The origin of the Festival of *Maṣṣôth* is more uncertain. It appears to have originated from an old religious custom that all bread offered to Jahweh was to be without leaven (Ex 23[18]; cf. 34[25] [J], where the same prohibition appears to be confined to the Paschal meal). In later times this law was not so rigidly observed. At any rate a distinction seems to be made between unleavened cakes actually offered on the altar (Lv 7[12]) and those which were merely presented, as the wave-offering of loaves at Weeks (see below), and the thank-offering (Lv 7[13f.]). Whether the shewbread was made of leavened or unleavened bread is not clear. It is probable that in early times a distinction was made between what constituted the essential part of the feast, as usually the animal sacrifice, and what was merely eaten with it, as the bread. In the case of *Maṣṣôth*, the unleavened bread was the essential part of the sacrificial meal. It is probable that originally the unleavened cakes were the first prepared out of the barley harvest, analogous to the first two loaves of the wheaten harvest at Weeks (Lv 23[17]). There is no reason to suppose that the festival in early times lasted more than a day, or was even more than a single meal. The use of leaven has sometimes been explained, as by Wellhausen, as arising from the unwillingness to mix the firstfruits of the new season with what belonged to the old, the leaven being a piece of old fermented dough. Even in the earliest account of the festival (Ex 13[6-10] [J]) it is explained, however, as a memorial of the hurried flight from Egypt when the people had no time to prepare leaven.

In the Priestly Code the Feast of *Maṣṣôth* follows immediately after the Passover, and they practically form one festival, now regarded as commemorating in various ways the sudden flight from Egypt and the events connected therewith. In addition to the use of unleavened bread, the chief provisions were: (α) the selection of a lamb or kid on the 10th day of Abib (Nisan) (Ex 12[3-4]); (β) the slaying of the lamb on the 14th, 'between the two evenings,' *i.e.* probably just before the evening with which the 15th of Abib began (v.[6]); (γ) the sprinkling of the blood on the doorposts and the lintel of the house in which it was to be eaten (v.[7]); (δ) the roasting of the lamb whole (vv.[9. 46]). It was to be eaten (ε) with unleavened bread (vv.[8. 15. 18-20]), and (ζ) bitter herbs (v.[8]), and (η) in haste with loins girded, shoes on feet, and staff in hand (v.[11]). (θ) Nothing was to be left to be eaten the next day, but all remains were to be burnt with fire (v.[10]).

Of these (ζ) was to signify the hardship of their bondage in Egypt, (η) their sudden flight; (γ) commemorated, of course, the sprinkling of blood which caused the angel to 'pass over' their houses, when he slew the Egyptian first-born. It is doubtful whether (η) was ever actually practised. There is certainly no reference to it in the Mishnic tract *Pesaḥim*, in which it is expressly declared that 'even the meanest in Israel shall not eat until they have arranged themselves in proper order at ease round the table.' It is not easy to explain (δ) and (θ). Probably the latter was enjoined because, according to the traditional view, the Paschal feast commemorated that one night only of Israel's flight, and therefore everything over was burnt lest it should be desecrated by other use. (δ) has been thought to symbolize the unity of the family, the Passover being originally a purely domestic festival, a bond of union between the participants and Jahweh. But perhaps the idea was that the whole was to be offered to Jahweh, as was the case with the burnt-offering, the eating being regarded as a sacrificial act, continued by the burning of all that was not consumed. It is hardly conceivable that anything analogous to the symbolical explanation given by St. John (19[34-36]) was originally conceived of.

In the Priestly Code all the 7 days of the festival were marked by special additional sacrifices—two young bullocks, one ram, seven lambs as burnt-offerings, with meal- and drink-offerings; and a goat for a sin-offering; and the 1st and 7th days were holy convocations (Nu 28[16-25]). In later times several additional customs grew up in connexion with the combined Feast of Passover and *Maṣṣôth*, such as the singing of Psalms (*Hallēl*), and the passing round of cups with words of benediction, etc. The latter custom is of great importance from the Christian point of view, as being one of the symbols chosen by Christ, together with the unleavened bread, in instituting the new rite of the Eucharist (cf. Mishn. *Pesaḥim*). There is also an allusion to the singing of a Psalm in Mt 26[30], Mk 14[26].

(3) The *sheaf-offering* (*'ōmer*, Lv 23[10-14] [H]).—Probably at first everybody offered independently his own first-cut barley sheaf, which would have naturally happened on different days. Afterwards a special time was fixed, and one offering was made for all. Dt 16[9] already speaks of 'the time thou beginnest to put the sickle to the standing corn' as of one which is common to the whole community, and could therefore be made the basis for computing the Feast of Weeks. That it should afterwards have become absolutely fixed was the natural result of the centralization of worship by

Josiah. It does not, however, appear in D to be necessarily connected with the festival of *Maṣṣôth*; and, if the view taken of the latter be correct, it would naturally have preceded it by a few days. According to H, the waving of the sheaf took place on the morrow after the Sabbath in that festival (Lv 23[11. 15]). This has generally been explained as the day following the first day of the feast, *i.e.* the 16th of Abib (see Jos. *Ant.* III. x. 5), but the Sabbath is obviously used in its ordinary sense in the immediate context in vv.[15. 16], and probably should be so understood here (see Driver, *PB*, 'Leviticus,' p. 94). The reason for fixing this day was probably that the cutting of the corn was unlawful on the Sabbath itself. At a later time, when the Sabbath was understood to mean the first day of the Feast, it became a burning question whether the cutting of the sheaf was lawful if the day after happened to fall on an ordinary weekly Sabbath (Edersheim, *Temple: Its Ministry and Services*, p. 222 ff.). The waving of the sheaf was followed by an offering of a lamb with a meal-and-drink-offering, and only thereafter might the new corn, whether parched or in loaves, be eaten (Lv 23[14]).

2. The Feast of Weeks.—The second festival is described in Ex 23[16] as 'the feast of harvest, the firstfruits of thy labours,' in 34[22] as 'the feast of weeks, the firstfruits of wheat harvest.' The name 'feast of weeks' is explained by the fact, stated in Dt 16[9-10], that it took place 7 weeks after the beginning of the harvest (*i.e.* the barley harvest); hence the Gr. πεντηκοστή, the 50th day. But the name and the relative date which gave rise to it are both very artificial, and are hardly likely to be original. Though they may not have originated with D, they probably illustrate a custom in vogue at the Temple of Jerusalem, and exemplify the natural tendency, especially in a city, to substitute, for the sake of general convenience, fixed dates for the chances of the natural seasons. It seems likely that the festival was originally known either as 'the day of the harvest' or as 'the day of the firstfruits'—a name which survived even in P (Nu 28[26]). But the phrase, 'the firstfruits of the harvest,' raises a further question, whether originally the rite may not have consisted in the offering of a sheaf of wheat analogous to the sheaf-offering of barley at the commencement of the barley harvest (see above). If this were so, the festival must originally have been only a few weeks after the Passover. At a later time, at any rate, the firstfruits consisted of the first two loaves made out of the new wheat (Lv 23[17] [H]), analogous perhaps to the original intention of the Feast of Unleavened Bread. In the Priestly Code the sacrifices were the same as on the 7 days of *Maṣṣôth*.

Just as the Passover became the Easter Feast of the Christian Church, so did Weeks (Pentecost) become the Whitsun Feast, commemorating the outpouring of the Holy Spirit on that day (Ac 2).

3. The Feast of Ingathering (Ex 23[16] [E] 34[22] [J]) is described in these ancient codes as taking place at the end of the year, *i.e.* about the autumnal equinox, but otherwise does not appear to have been definitely fixed. It is implied in D (Dt 16[13-15]) that it is a thanksgiving for the produce of the threshing-floor and the wine-press. It is to be kept with joy for 7 days. No explanation is given of the booths in D, and it is evidently spoken of as a well-known and recognized custom. In H (Lv 23[34. 36a. 39a. 41-42]) it is ordered that it should begin on the 15th day, and that it should last 7 days (vv.[36b. 39b], which speak of an 8th day, are evidently a much later interpolation). On the first day they were to take 'the fruit of goodly trees, branches of palm-trees, and

boughs of thick trees, and willows of the brook.' The first phrase suggests the inquiry whether the boughs may not originally have been designed as offerings. If so, the festival must in the earliest times have taken place somewhat earlier in the season, when the fruit was on the trees. Others explain booths as commemorating those used by the gatherers of the vintage, etc. Possibly we should draw a distinction between branches of fruit-trees offered and the boughs of thick trees and willows used in the construction of the booths. The explanation given, however, in v.[43] is a historical one—to commemorate the dwelling of the Israelites in booths, when they left Egypt. The custom, if it had been restored in the Second Temple, had fallen into abeyance in the time of Nehemiah, and no recollection of it survived (Neh 8[13-18]). The statement that it had not been observed since the days of Joshua is probably an argument of the Chronicler *e silentio*. It is noticeable, however, that, among the trees mentioned when it was revived, we find not only palms but olives—another fruit-tree (v.[15]).

In P (Nu 29[12-38]) the days of Ingathering were marked by special sacrifices, the principal feature being the great burnt-offerings of bullocks, diminishing daily, from thirteen on the 1st day to seven on the 7th. On the 8th there was only one bullock. Besides, there were two rams and fourteen lambs on each of the 7 days, one ram and seven lambs only on the 8th, and a goat for a sin-offering on each of the 8 days. The diminished offerings on the last day point to its being a sort of supplementary day added to the feast. Yet both it and the first were now appointed as days of 'holy convocation,' on which no servile work might be done (cf. Lv 23[39b]).

(*b*) *Post-exilic.* — **1.** In the legislation of the Priestly Code an additional festival was added, the **Feast of Trumpets.** This appears to have originated from pre-exilic custom. It was appointed to take place on the 1st day of the 7th month (Tishri). This was the New Year's Day of the pre-exilic calendar (see CALENDAR [Hebrew], **2** A (1)), and it is probable that the blowing of trumpets on that day is comparable with the English custom of ringing in the New Year. It came to be a festival of considerable importance when what appears to have been its original meaning was lost. It was a day of holy convocation, and was marked by a burnt-offering of a young bullock and a ram, seven lambs, and a sin-offering of a goat (Nu 29[1-6]).

2. The Wood-offering.—The 15th of the 5th month (Ab) was the last of the times appointed for bringing in the wood-offerings for the Temple (Neh 10[34] 13[31]). It was observed as 'a popular and joyous festival' (Edersheim, 295 f.; Jos. *BJ* II. xvii. 6).

3. The Dedication Festival (*Ḥanukka*) lasted for 8 days, from the 25th of the 9th month (Kislev), and commemorated the re-dedication of the Temple and the new altar of burnt-offering, after their defilement by the idolatrous worship introduced by Antiochus Epiphanes (1 Mac 4[36-59]). It is called by Josephus (*Ant.* XII. vii. 7) 'Lights,' for which he suggests a symbolical interpretation. It seems more natural to refer the name to the practice of lighting candles ceremoniously in the Temple and in houses during the feast—a custom which was perhaps intended to commemorate the re-lighting of the sacred lamp in the Temple after its re-introduction (1 Mac 4[49. 50]; but for traditional beliefs concerning its origin, see Edersheim, 293 f.). According to St. John (10[22-39]), this festival was the occasion on which an attempt was made to stone Jesus, on the charge of blasphemy, for asserting His Divine Sonship. It has been thought that the date of the feast suggested the date of Christmas Day; and there is certainly a remark-

able resemblance in the name and ritual between this and Epiphany, which was also called in ancient times the 'Day of Lights' (see Bingham, *Ant.* XX. iv. 6, 7).

4. **Purim** (called also 'Mordecai's Day' in 2 Mac 15^{36}).—This festival was kept on the 14th and 15th of the 12th month (Adar). It commemorated the vengeance taken by Mordecai and the Jews on their enemies as recorded in the Book of Esther (9^{15-32}). The name is explained as the plural of *pûr*, 'a lot,' and as having reference to the lots cast by their enemies to destroy them (v.^{24}). The Book of Esther is, however, certainly not historical, and appears to be a religious romance written to explain the meaning of the Feast. *Purim* may have been originally a Persian or a Babylonian institution adopted as a secular feast by the Jews, and afterwards invested with a religious character. Even in later times the only religious ritual for many centuries appears to have been the solemn reading of the Roll (*megillah*) of Esther. See, further, art. 'Purim,' in *HDB* and *EBi*; and cf. Frazer, *GB*^{2} iii. 153 ff.; also below, p. 872^a, note.

5. **Feast of Nicanor.**—This was appointed to be kept on the 13th of the 12th month (Adar), in the time of Judas Maccabæus, to commemorate his victory over Nicanor (1 Mac 7^{49}, 2 Mac 15^{36}). But it never appears to have been considered of great importance. Josephus says of it: 'The Jews thereon (*i.e.* the 13th of Adar) celebrate this victory every year, and esteem it as a festival day' (*Ant.* XII. x. 5). From the first it was overshadowed by the Feast of Purim, and came to be kept as a fast in commemoration of the fasting of the Jews connected with the object of that feast (Est 4).

iv. SACRED YEARS.—1. **The Sabbatical year.**—An ancient law provided that the term of service for a Hebrew slave should be 6 years, and that in the 7th year he should at least have the option of going free (Ex 21^{2-6} [E], Dt 15^{12-18}). Another law required that the land should not be sown, or any work done in the vineyard or oliveyard every 7th year, but the self-grown crops were to be for the poor and the beasts of the land (Ex 23^{11} [E]). In D there is no provision for the land lying fallow; but, in addition to the law of slave-release every 7th year, there is another requiring the release from all debts in each 7th year, which in this case was to be proclaimed as 'Jahweh's release' (Dt 15^{1-6}). In this year they were required to read the Deuteronomic Code at the Feast of Booths (Dt 31^{10-13}). There is no reason to suppose that, in the earlier code, at any rate, the fallow law implied one common year for all the land, for every kind of crop, or even necessarily for every field or farm. Such a law would have caused the most dire confusion amongst a people chiefly agricultural. It was different with the condition of the Jews after the Exile, and to some extent in the later history of the Southern Kingdom before it. We find a provision for one common year first in the Law of Holiness, which provides for a definite Sabbatical year (Lv $25^{1-7. 19-24}$). It is also implied in Ezk 46^{17} unless that indeed refers to the Jubile.[1] We are told also in Lv $26^{34f.}$ (cf. 2 Ch 36^{21}) that the ancient law had fallen into disuse, and that the Exile was (or would be) a recompense to the land for its neglect. No mention is made, in connexion with the Sabbatical year of Lv 25, of the release either from debts or from slavery, but the first is clearly implied in Neh 10^{31}, where it is evidently referred to as an ancient custom. We find several references to the Sabbatical year in later times. In it all warlike operations ceased (Jos. *Ant.* XIII. viii. 1, *BJ* I. ii. 4). In it they held it as unlawful, or perhaps only as impracticable, to pay tribute; at any rate they requested Alexander that they might be excused (*Ant.* XI. viii. 5). Tacitus complains that the 7th year was given by the Jews to idleness (*Hist.* v. 4).

[1] The spelling 'Jubilee' should be avoided.

2. **The year of Jubile.**—The laws regulating this year are given in Lv $25^{8-17. 23-33. 50-54}$ 27^{16-24}. As, however, the first and principal passage breaks the context (vv.$^{1-7 \text{ and } 18-22}$ dealing with the Sabbatical year), it is probable that it is a later interpolation into the original law of H, and should be regarded as belonging to the Priestly Code (Driver, on the other hand, in his 'Leviticus,' *PB*, regards vv.$^{8. 9a. 10a. 13-15}$, requiring the restoration of the land, as a genuine part of H). According to the text as it stands at present, every 50th year (or probably every 49th year; see below)—(1) all land is to be restored to its original owners (vv.$^{10b. 13-16. 25-33}$); (2) all slaves, whether Hebrew or foreign, receive their liberty, and no choice of continual bondage is contemplated (v.^{10} etc.); (3) the land is to lie fallow, as in the Sabbatical year (v.$^{11f.}$); (4) the year itself is to be proclaimed by the sounding of a loud horn on the 10th day of the 7th month (v.^{9}).

(1) The first of these regulations made all possession of real property practically a sort of lease, and calculations were made as to the length of tenure in buying and selling land. Originally it was contrary to the usage of common law to alienate property, which descended from father to son (see 1 K 21^3). But the custom had long fallen into abeyance (cf. Is 5^8), and the regulation of P was probably an attempt in post-exilic times to enforce a modification of the old custom. (2) The same tendency is shown with reference to slave release. The law in this respect was probably an attempt to enforce, every jubile, what should have been observed every 7 years, but had been neglected. (3) Perhaps the same was intended with reference to the fallow law; but in this case the 7th year's rest was in fact revived and enforced. (4) It has been suggested that the year originally began on what was afterwards not the 1st but the 10th day of the 7th month. This would account for the Atonement being afterwards connected with it. The atonement of the sacred things on probably the 1st day of the 1st and 7th month, proposed by Ezekiel, may be a continuation of a pre-exilic practice (Ezk 45^{20} LXX; see below, III. 2). The absence of any reference to debts is singular if it was intended that the jubile should take the place of the Sabbatical year, but it is partly explained by the law which forbade usury altogether to a Hebrew (Lv 25^{35-38}).

It has been argued that the law of jubile was merely tentative and was never really enforced, on the grounds that (1) it was impracticable to have a second year of fallow immediately following the last, viz. the 49th year; (2) there is no certain reference to it in history, and in fact the only Sabbatical years of which the date is actually known, viz. 164–163, 38–37 B.C., and A.D. 68–69, do not give room for an intercalated year. But these objections depend largely on the assumption that the year of jubile was intercalated after the 49th, and that the next Sabbatical year was reckoned not from the last, but from the year of jubile. But this is nowhere stated. On the contrary, it is quite possible that the jubile was intended to fall every 49th year. 'Then shalt thou send abroad the loud trumpet' (Lv 25^9) might as well refer to the 49th as to the 50th year of the cycle. The 10th day of the 7th month is equally difficult to explain in either case, but the difficulty disappears if it was a custom originally belonging to the beginning of the year. So understood, there is no question of two fallow years in succession, and every jubile year was necessarily a Sabbatical one. The analogy of the Feast of Weeks is strongly in favour of this interpretation. It would appear that the chief intention was to mark very specially every 7th Sabbatical year, and require its obligations to be strictly enforced. It was probably part of the system of religious observances introduced by Nehemiah.

II. *OCCASIONAL FESTIVALS.*—Festivals not followed up by a yearly commemoration were appointed to celebrate some important religious or secular event, such as the bringing of the Ark from Kiriath-jearim (2 S 6^{16-19}), the coronation of

the king (1 K $1^{9.41}$), the dedication of Solomon's Temple (1 K 8^{63-66}), the victory of Jehoshaphat over the Ammonites and Moabites (2 Ch 20^{26-30}), the laying of the foundation of Zerubbabel's Temple (Ezr 3^{10-13}), the dedication of the city walls by Nehemiah (Neh 12^{27-43}). If the details of the Chronicler cannot always be trusted in his descriptions of such events, there is abundant evidence of the custom itself. Some of the Psalms, esp. the 118th, suggest by their contents that they were written for such occasions.

III. *PERIODICAL FASTS.*—1. The earliest appointed fasts were those instituted during the Exile to commemorate events connected with the siege and capture of Jerusalem (Zec 7. 8^{18-19}). The fast of the 4th month (17th of Tammûz) commemorated the capture of Jerusalem (Jer 39^2, 2 K 25^{3-4} give the 9th as the day that the breach was made by which the king, etc., escaped, but do not make it clear that the city was at once captured). The fast of the 5th month (9th of Ab) commemorated the destruction of the Temple (according to Jer 52^{12-13} it was the 10th day, in 2 K 25^{8-9} the 7th). The fast of the 7th month (the 2nd of Tishri) was said to commemorate the murder of Gedaliah and his companions at Mizpah (Jer 41^{1-10}, 2 K $25^{25f.}$). The fast of the 10th month was on the 10th of Tebeth, on which day the siege of the city began (Jer 52^4, 2 K 25^1). After the Return, the question arose whether these fasts should be still observed. Zechariah answered it by saying that the observance of them had been, strictly speaking, after all, a purely selfish thing; that what Jahweh really cared for was justice and mercy (8^{18-19}; cf. the similar teaching of Is 58^{3-12}); and that the time was coming when these fasts would be 'joy and gladness, and cheerful feasts.' They still, however, continued, and new traditions arose to account for their origin. Thus the first was said to be the anniversary of Moses' breaking the tables of the Law; the second was held to commemorate also the destruction of the Second Temple by Titus, etc.

2. The Day of Atonement (*yôm hakkippûrim*, 'Day of Coverings,' which came to be known as, *par excellence*, 'the Day') was observed as a complete day of rest and fasting, from the evening of the 9th to the evening of the 10th of the 7th month (Tishri). It was evidently unknown in the time of Zechariah (see above); and even in the time of Nehemiah (ch. 9) it was not made use of for the special purpose of a national humiliation, but a day for the purpose was appointed just a fortnight later, though the Feast of Trumpets was duly celebrated on the 1st, and that of Booths on the 15th–22nd days of the same month. It was probably a very late institution, belonging to the period of a late recension of the Priestly Code, the laws regarding it in Lv 23^{26-32} being a later insertion in the Law of Holiness. Curiously enough, in Ezekiel's Temple (Ezk 45^{18-20}) the atonement for the Temple takes place on the 1st day of the 1st month and on the 1st day of the 7th month (so, probably correctly, LXX); but there is no mention of any atonement for sins. This raises the question whether the atonement was not originally intended as a sort of annual consecration or purification of the Holy Places, the 10th day of the 7th month having been originally, so it has been suggested, the beginning of the year (see above). This purification of the Holy Places continued to be a very prominent feature of the ceremonies of the Day. Of these, as the rite existed in later times (Lv 16), the most important were the offering of a young bullock by the high priest, as a sin-offering for himself and his house, and the selection of two goats by lot—one for Jahweh, which was sacrificed; the other for Azazel, which was sent into the wilderness after the high priest had confessed over it the sins of the people. It is probable that Azazel (*q.v.*) was originally some popular deity, perhaps connected with the goat-gods, *s'ˊîrim* (Lv 17^7, 2 Ch 11^{15}, Is 13^{21} 34^{14}), which were believed to inhabit desolate places (cf. Mt 12^{43}). It came afterwards to be regarded as an evil spirit, just as the Ekronite god Baalzebub (2 K 1^2) came to be taken as the name of the prince of devils (Mk 3^{22} etc.; cf. 1 Co 10^{20}). The meaning would then be that the sins were consigned to destruction. According to the Mishnic tract *Yôma*, the goat was led out and thrown over a rock. The high priest entered at least thrice into the Most Holy Place, purifying it by sprinkling the blood of the bullock and the goat about the mercy-seat, or the stone which afterwards represented it, and censing them with incense. The Holy Place was afterwards purified in the same way. This was the only day on which even the high priest, and then he only, was permitted to enter the Most Holy Place. For a symbolical explanation given by an unknown Christian writer, see He 9^{6-14}.

3. Weekly fasts on Mondays and Thursdays were practised by the stricter Jews between the Feasts of *Maṣṣôth* and Weeks, and between those of Booths and Dedication (cf. Lk 18^{12})—the latter week-day being, according to tradition, the day on which Moses went up Mount Sinai to receive the two tables of the Law, the former that on which he descended (see Lightfoot, *Hor. Heb.* on Mt 9^{14}).

IV. *OCCASIONAL FASTS.*—In pre-exilic times there were no regularly recurring fasts, but fasts were proclaimed as acts of humiliation and penitence on the occasion of any great national disaster. Thus we read of the fast at Mizpah in consequence of the oppression of the Philistines, followed by their overthrow (1 S 7^6; cf. 2 Ch 20^3); that appointed by Jezebel when she got Naboth accused of blasphemy (1 K 21^9); that appointed in the reign of Jehoiakim, probably with a view to warding off the threatened attack of the Chaldæans (Jer $36^{6.9}$). We find the practice of special fasts continuing in post-exilic times, and such a fast was appointed by Nehemiah on the 24th day of the 7th month as a national act of penitence (Neh 9; cf. also Jon 3^{5-9}, Jl 1^{14} 2^{12}).

F. H. WOODS.

FESTIVALS AND FASTS (Hindu).—As described in ancient literature, all Hindu festivals were religious; and this is not due solely to the fact that the literature itself is religious. Either inherently, as in connexion with sacrifice to a god, or artificially, as when a coronation was accompanied by rites which made the whole ceremony a religious festival, all celebrations of a public nature consisted partly in feasting and partly in religious exercises.

i. *ANCIENT FESTIVALS.*—1. Among the seasonal festivals the moon-feast always held a high rank, and is important not only on account of its antiquity, but also on account of its prevalence, since even the Buddhists preserved a memory of it in the

Uposatha festival, though reduced in that sober organization to a Sabbath-day observance. In the sacrifice at the new moon, and the full moon, the Hindus themselves recognize the prototype of all sacrifices of similar character, and they are probably right in doing so. The moon-festival lasts two days at the new and one day at the full moon, but neither form has so well preserved the festival character as has the 'four month' celebration (see § 2).

2. The seasonal 'four-month' celebration, as the name implies, occurs at the end of the seasons of four months each, so that there are three in every year. At the close of winter or the beginning of spring the celebration is ostensibly in honour of the All-gods; at the beginning of the rainy season, in June, it is in honour of the water-god, Varuna; and in autumn it becomes the sacrifice of firstfruits. Especially in these seasonal festivals is the old popular participation in the religious rites predominant. The goat and ram which are sacrificed are decorated with phallus-emblems, and the wife of the sacrificer has to confess in public how many lovers she has had and wish them all ill. She and the sacrificer take a bath of purification analogous to the bath taken by savages on like occasions, in which the man and woman wash each other's backs.

3. There is also a special ceremony of firstfruits, in which the eating of the firstfruits is regulated religiously.

4. In the soma-sacrifice the dramatic element enters in the purchase of the intoxicant. The *Vājapeya*, an autumnal *soma*-festival and sacrifice, has a number of such popular elements. The chief participants were garlanded (with 'golden garlands'), and at a fixed time there was a horse-race over a measured course (seventeen bow-shots), in which three horses were harnessed to one car, and sixteen other four-horse cars took part in the race. This festival was marked by the drinking of *surā* (brandy) as well as *soma*. The crowning of the sacrificial post and the special prominence of agricultural elements point to the fact that it was at first a farmers' festival, though it has become a weak priestly affair, from which the popular character has disappeared. See, further, art. ABHIṢEKA, vol. i. p. 24.

5. Either in autumn or in spring occurred the consecration-ceremony, which, as occasion demanded, was celebrated as a sacrifice; but it also contains much of popular usage, such as magical rites, symbolic war, games of chance with dice, and a special ceremony to cure the drunkenness due to debauch. The king is soundly beaten, and the reminiscence of human sacrifice still lingers in the formal ritual of the great occasion. The inhabitants of the realm may not cut their hair for a year after this ceremony—a tabu met with in other parts of the world.

6. Like a public festival is the horse-sacrifice, later associated with the assumption of the dignity of emperor, but originally not peculiar to this function. It is one of the oldest of Hindu sacrifices, and must have been originally a carouse of the grossest sort—probably a spring-festival. It is marked by ribald dialogue, obscenity of act as well as of word, and appears to have been from the first associated with reproductive ritual. In the later form it is characterized by the number of priests feasted and presented with valuable gifts; by the attendance of the king and his four wives; by the escort, consisting of hundreds of princesses and daughters of the nobility; by the recitation of old tales; and by the freeing of the horse which is to roam about herded by princes for a year, at the expiration of which period it is brought back and the sacrifice takes place, together with that of a large number of other animals. The rich adornment of the steed, and the music and obscenity of the rite, are given in the ritual; but the impression of the popular character of the festival is more truly conveyed by the description of the horse-sacrifice in popular literature (see, further, art. AŚVAMEDHA, vol. ii. p. 160).

7. Another great event in the Hindu year was the celebration of the solstice-feast. Many popular traits connect the old ritual with the modern New Year's festival—music, lute-playing, the dramatic appearance of loose women, and the turn of the sun dramatized by discus-play and by mounting the swing. Each of the two solstice-festivities had its proper divinity and melody, and the melody of the summer solstice was accompanied by drums, to imitate thunder, while that of the shortest day was accompanied by the rattle of war-cars, representing an attack on the evil spirits of winter. The dancing of girls round fire, with full water-jugs, and their singing ('a joyous song') were additional popular elements.

8. A twelve nights' celebration occurred after the winter solstice, though little remains in this of festival character, except the recognition of a period which, from remote antiquity, had been considered sacred, when the *Ṛbhus*, the three personified seasonal deities who divided up the year, slept. The weather of this season was taken as a prognostic of the year to come—one of the main reasons to-day for celebrating the similar feast in South India. The eighth day after the full moon of the new year was the exact 'type of the year,' which determined whether the year was to be lucky or not.

9. Apart from these celebrations, the beginning of the great modern festivals which terminate annual pilgrimages may be seen in the early mention of pilgrimages and sacrifices at certain particularly holy spots, such as those to the Sarasvatī and Dṛṣadvatī rivers. The *tīrtha*, or *ghāt*, where a stream is fordable, became, in the case of a holy river, the meeting-place of pilgrims. Such pilgrimages are recognized but not approved by the early writers, who admit only the efficacy of sacrifice at a holy place; but such orthodox objections were set aside after the visits at Buddha's shrines became popular, and already, in the first centuries before our era, hundreds of holy places were known and visited by the devotees of various Brāhmanized gods.

ii. *MODERN FESTIVALS.*—These stand to those of ancient days somewhat in the same relation as private and public festivals stand to each other. They cannot be entirely separated from the old, yet they are so new in their character as to be virtually distinct. The old occasion is preserved, or rather it forces itself upon the notice of the public; but that public is so different, and the ceremony of celebration is so diverse in details, that it is new in effect, though old in general character. The chief local festivities to-day are associated with places and deities unknown to the ancient world of India; but the seasons remain the same, and the celebration of the advent of spring, for example, does not differ in reality from the old spring-festival. To whom the honour is paid is of less importance than that the festivity should be celebrated. The rites in honour of one god have passed over to another without materially altering the celebration, and sometimes even to-day the same celebration is held in honour of different gods. Thus the very pleasing 'lamp-festival,' in which, in autumn, lamps are lighted in every direction, floating lamps are set off down rivers, etc., is celebrated by some as a festival in honour of Viṣṇu's wife, and by others in honour of Durgā (*q.v.*), the wife of Śiva. One thing is to be remarked in regard to the modern festivals, as

compared with the old, namely, that whereas the old seasonal festivals, such as those of the New Year, spring, and autumn, were degraded into ritualistic observances, so that in many cases it is hard to recognize the original intent, the modern festivals have thrown off Brāhmanism as far as possible, and are more clearly celebrations of seasons, devoid of priestly ritual and self-sufficient. In other words, in the modern festival we have a reversion to the real meaning of the feast, which, even in the oldest literature, was already so buried in ritual as to be virtually lost. Most of the modern festivals celebrate seasonal changes, or are held in connexion with pilgrimages to some holy place, the shrine, or the river *tīrtha*.

In Northern India the most famous of these types are respectively the spring-festival, the pilgrimage and celebration at the shrine of Jagannath (originally Buddha, now Viṣṇu), and the pilgrimage and fair at the junction of the Ganges and Jumna rivers (Allāhābād [*q.v.*]). The seasonal festival is celebrated by all; that at Puri, in Orissa, in honour of Jagannath is supposed to be celebrated by worshippers of Viṣṇu, but is actually celebrated by worshippers of Śiva and Durgā as well; while any religious person may be found making a pilgrimage to Allāhābād, to wash away his sins and enjoy himself at the fair. In South India the spring-festival is celebrated much as in the North, and *tīrtha* pilgrimages and fairs are also held, though with rather more pronounced sectarian feeling. There is, however, a great difference in the character of the different modern festivals. The cleanest is the *tīrtha* celebration. This is really a moral as well as a religious performance; and, though men and women bathe together almost naked, there is no wantonness, and no advantage is taken of the situation by evil-minded men. It is a festivity by accident, due to the immense concourse of people and the resultant fair. It is kept, as it is intended to be, as a purification. On the other hand, the temple and shrine pilgrimages in honour of an erotic deity are naturally more or less erotic in character, and at the spring-festival indecency is part of the recognized programme.

Finally, before passing to a closer consideration of the modern festival, it should be said that between the old and the new there must have been a large number of special festivities now lost sight of, or only faintly reflected in the intermediate literature—not to speak of the many special festivities in honour of gods and goddesses described in the mediæval Purāṇic and Tantric literature. Some of these appear to have been popular as well as sectarian; but we know very little about those not described in religious books, and the latter, as described, consist in childish ritual.

Some of the modern festivals are both sectarian and seasonal. Thus the spring-festival in the South is often a Kṛṣṇa festival and love-feast, and the autumn-festival in the North (Bengal) is indifferently a seasonal or Durgā feast, as it is now called. As in the devil-frightening festival already referred to as the 'lamp-festival,' the original intent of the celebration is merged in the worship of some modern deity. The same sort of a celebration as that in honour of Durgā is held in other parts of India in honour of Sītā, the wife of Rāma. Both were originally a kind of All-Fools' Day; in both the chief observances are buffooneries, pantomimes, processions, music, and the casting of the image into water. Such an All-Fools celebration was known under different auspices in ancient India, and it survives to-day in practically the same form whether as a feast to Durgā or to Sītā. A characteristic feature of all these festivities is mimetic exhibition, which on the stage assumes serious proportions, but on the street is simply licensed vulgarity.

The *Holi* (spring-festival) is, as in other countries, the occasion when this sort of thing is most pronounced. The orgies of obscenity which welcome the return of spring are scarcely veiled. The very cars of the gods are decorated with carvings comparable only with those Pompeian scenes now kept from view, but which in India form the delight of men and women. The law practically permits of any excess, the god encourages it, and the nature of the people, which made the law and the god, revels in its own unbridled enjoyment of indecency. Street dances, bonfires, and the throwing of red and yellow powder upon the passers-by remind the Occidental visitor of a Western carnival; but no Western carnival at its worst is so frankly sensual as is the spring-festival of India. This festival appears under various names and disguises. It is identified with the *Dola-yātrā*, or swing-festival, at Puri (in Orissa), where the idols are swung, and is celebrated for three (sometimes ten) days before the full moon of Phālguna, which corresponds with that of February-March. When celebrated for Kṛṣṇa, games take place in his honour. Sometimes, however, the swing-festival is kept distinct from the *Holi*.

The chief seasonal festivities are the *Makara-saṅkrānti*, when the sun turns north, answering to our New Year's Day, which is the time for the great pilgrimage to Allāhābād and the annual bath of purification in the sacred rivers of the North, while in the South it is the season for the festival called *Pongol*, at which the boiling of the new rice is watched and regarded as an augury for the New Year, and cattle are led about decorated with garlands and treated with veneration. Presents are given to friends at this time, and general rejoicing takes place. The festival lasts for three days, and is officially a celebration of the Vedic gods Indra and Agni, with the addition of the (later) god Gaṇeśa. The cooking of the rice is in the South the main event of the *Pongol*, which has given the name to the festival. Anxious bands await the verdict of the official cooks; and, when the rice boils, a glad cry resounds, 'It boils, it boils,' and all with intense excitement repeat the acclamation. In Bengal the New Year is inaugurated in spring, and here the main features are the worship of the Ganges and the cult of the *dhenki*, or husking-bean; while, at the date of the southern *Pongol*, the bathing-festival, which brings together 100,000 people, absorbs popular interest.

Between the New Year's and the *Holi* festival a special day is devoted to the worship of the goddess of eloquence and arts, Sarasvatī, at which time books are worshipped and fasting is enjoined; but the occasion is also a festival, more especially for children; and boys play games to celebrate the day. Another day is devoted in early spring to Śiva, whose phallic image is worshipped, with fasting and prayer, by pilgrims. The birthdays of the two popular gods, Rāma and Kṛṣṇa, are also observed by adherents of these sects, one of them coming on the ninth of Chaitra (March-April) and the other in July-August, just before which there is a celebration in honour of the fabulous *Nāgas*, although the birthday of Kṛṣṇa is sometimes celebrated as an autumn-festival, in August-September (the eighth and ninth of the month Bhādra). On the fourth of Bhādra, Gaṇeśa, the 'son of Śiva,' is especially worshipped, and his image is thrown into the water. The Durgā festival of Bengal occurs in the month Āśvina, on the tenth day of the light half of the moon, about the time of the autumnal equinox. After this

there is the 'lamp-festival' in October (see above), and at the full moon of October-November (in the native month Kārttika) a celebration especially devoted to Śiva. The great goddesses, wives of the great gods, have their special days, but besides these there is a great festival in honour of women and children, or the goddess supposed to be theirs, namely, the 'mother of sons,' who is revered under the form of a banyan tree. This celebration (in Bengal) consists chiefly in processions and music in honour of the mother-goddess. The procession goes to the banyan tree, and the participants worship and pray to her there. On this occasion fathers-in-law are expected to give presents to their sons-in-law, and the time is said to be 'one of the happiest days of the year.' The festival of firstfruits, to which reference has already been made, is not one in honour of a special god. It is held at the season when new grain is ripe; and offerings are made to gods, *manes*, cattle, crows, and jackals. The rites to the *manes* are celebrated with especial unction in February at Gayā (*q.v.*), the old seat of Buddhistic worship—some say because the Buddhists were regarded as most opposed to this cult. It is at present a stronghold of Vaiṣṇavism.

The expense of festive celebrations, which is often considerable, is easily met at places where there is a huge concourse of visitors, as at Puri or at Pandharpur, in the Bombay Presidency, where as many as 50,000 pilgrims gather in a day; but in small communities the cost is met by public contributions, and several villages will often combine to have a festival in common—building a pavilion, honouring the god, and providing the feast. The idol that is made use of on such occasions is a temporary effigy, made of clay and sticks, and is 'animated' by the priest, who, at the end of the celebration, flings the image into the water. At the small village celebrations the prayers and processions are, of course, in honour of the local deity thus represented, but the entertainment is catholic, and often consists in an evening recitation by professional story-tellers (or miracle-plays by professional actors) in honour of any god. Such entertainments sometimes include a nautch dance, theatrical representation of some mythological story, etc., and are not infrequently lewd. In larger towns one of the chief events is the *Ratha-yātrā*, or car-journey, of the god, at which thousands assist, and in the confusion and tumult the worshippers sometimes lose their lives. The cars are lofty structures, unwieldy wooden buildings on wheels, embellished with obscene sculpture, and dragged through the streets by a frantic mob of devotees. Such a *yātrā* at Puri in honour of Viṣṇu, or at Bhuvaneśvara in honour of Śiva, forms the chief public glorification of the god. Like many other traits of modern Hinduism, it was probably borrowed from Buddhism. At Puri there are three *yātrās*, the first being followed by the fair, and being the beginning of the celebration. It is called *Snāna-yātrā*, and celebrates the bathing of Viṣṇu's image.

That there were many festivals not included under the screen of religious rites in ancient times may be taken for granted, and this is supported by external evidence. Only an echo has come down to us of the fairs and theatrical exhibitions of semi-religious character, which used to be held in honour of different gods, and were occasions of public festivity. Wrestlers and boxers gave entertainments to the people and to the court, and the priests among themselves had contests of wit, in which the defeated debater was apt to lose his life. The great epic of India also reveals glimpses of festivals not formally recognized, such as that of the annual branding of cattle, at which the king and court held a sort of royal picnic; while the same work shows that court-festivals, where the royal family bathed and picnicked, were not without sensual elements. The erotic character of the Kṛṣṇa cult was at this time beginning to have effect in the popular shows and festivals, if indeed, as is probable, this element was not already at home. Another grand festival, as depicted in the epic, is the election of a princess, at which she is supposed to elect her future husband in accordance with his prowess and skill as shown in knightly tournament. The scene at such an election resembled more than anything else a similar tournament in the Middle Ages in Europe, and the crowd of spectators, the feasting, and the incidental entertainment made the event one of the greatest of the non-religious festivals of India's storied past. Animal contests, especially reprehended by the Buddhists, also formed part of the festivities of the seasonal fairs, especially fights between tigers and elephants, and cock-fights.

Many of these Hindu festivals have a counterpart in those of other races. One of these is the *Dola-yātrā* (swing-festival), or rather the swinging itself, which represents the sun-course, and was very likely borrowed from the aborigines. Even at the present day the grosser and more cruel form of this ceremony is practised by the wild tribes as well as by civilized Hindus. It consists in inserting hooks in the muscles of the back of the devotee or victim and then making him revolve when suspended by the hooks. This is again a perfect parallel to the swinging practised by the American Indians as described by Catlin (*N. Amer. Indians*, 1903, i. 193). Another rite, now practised and also perhaps borrowed from the same source, is the ploughing-festival, often connected with rain-making—magical or religious in intent, but adventitiously of a festival character. The numerous spring-festivals now in vogue appear to be the *disjecta membra* of a continuous spring-festival, which originally lasted a much longer time. The licence allowed at the *Holi* and other spring-festivals reverts to a time when sensuality was thought to corroborate Nature's vernal productive powers, though no such explanation is needed for the existence of the feeling thus brought by magic into relation with the process of Nature.

iii. *THE CALENDAR.*—The Hindu calendar is so closely connected with the subject of festivals that it may be said to have been an outgrowth of the seasonal character of feast and sacrifice. The priest himself was called the 'seasonal sacrificer' (*ṛtu-ij*), and it was his business to know when the festival to the gods took place, or, in other words, when the seasons began. It was not till later that 'star-man' became the title of a special professional character.

1. Modern and mediæval eras.—Before speaking of the earlier calendar, however, it may be well to distinguish at once the modern eras and explain their origin. Not only are they, but the idea underlying them is, if not exactly modern, at least only mediæval; that is, it reverts at most to an age subsequent to that of the Vedas. There are five such eras in common use—two political, two sectarian, and one popular and universal. The first political era is that of Vikrama, in India regarded as equivalent to the year 57 B.C. This is designated at times simply by the word *Samvat*, 'year,' which leads to confusion, since the second political era is regularly designated in the same way. The latter era is the 'era of the Scythians' (*Śāka*), popularly identified with A.D. 78. The two religious eras are those of the Buddhists, in Burma and Ceylon, and of the Jains, in North India. Buddha was born (probably) 500 years before the Vikrama era, so that his death (at the age of eighty) would have

taken place in 477 B.C., though native tradition prefers the year 544. Similarly, the Jains' leader, Mahāvīra, probably died in 662, at which time his era should begin; but it may have been later, as native tradition says that Mahāvīra's death (entrance into *Nirvāṇa*) occurred 470 years or 605 years before Vikrama.[1]

Not essentially different in popular consciousness from the idea leading to these religious eras is that underlying the people's universal era, dating from the death of the man-god Kṛṣṇa at the end of the great war and beginning of the last of the four ages, whence, from the name of this evil age, it is called the Kali-calendar, the first year of which is 3101 B.C. This, it is important to notice, was the era from which years were generally reckoned in India till the Śaka era in the 1st cent. A.D. It implies the calendar of the ages (*yugas*), or the theory that every emanation from the supreme being (*i.e.* human existence) is divided into four stages, each with a length shorter than the preceding.[2]

For dates within a year the popular method has always been to give the day by the asterism (moon-station) in which an event occurred, which designated the month, and by the fortnight; also, to be more exact, by the *muhūrta*, or hour of the day, sometimes by the night-watch (each night having three watches). Thus: 'on such a *muhūrta* of the tenth day of the dark fortnight of the month called after such an asterism.' This mode of reckoning brings us to a discussion of the earlier Vedic calendar.

2. The Vedic calendar.—We notice first that the intercalated month necessary to make uniform the solar and lunar year is already known as the 'later-born month' in the earliest literature of India, the Rigveda; and, since the same work speaks of twelve months and 360 days as year-divisions, it is evident that the five-year cycle of later periods was already recognized. According to this cycle, the solar year and the shorter lunar year were adjusted to each other by the insertion of an extra month on the second and fifth year of the cycle.

The sacrifices and festivals depended upon the moon far more than upon the sun in India, and this also is recognized in the Rigveda, which speaks of the moon as 'determining the seasons'—whether of sacrifice or of the year is not stated; but, from the context, the latter is less probable, and in fact the moon had nothing to do with the annual seasons, of which at this time only three were recognized: Heat, Rains, and Cold (later five and six seasons were known, but these also were named without reference to the moon). Moreover, the names of the months refer only to lunar months. The path of the moon through the heavens was laid out according to the stars or constellations through which it passed in the course of its round. These made 27, later 28, stations of the moon, and formed altogether a sort of lunar zodiac, like that of the Chinese and Arabs.[3]

The fact that the moon-stations called *nakṣatras* were already utilized to make the calendar of the Vedic age has had an important bearing upon the question of the date of Vedic literature.[1] Besides the lunar month the Hindus used the fortnight in their reckonings, but do not seem to have subdivided further, though the week, a 'seven-days,' is a period frequently alluded to in later literature. The lunar fortnight division attracted the attention of the Romans, and Quintus Curtius, in his *Life of Alexander* (viii. 9), speaks of it as a noteworthy fact.

As the five-year cycle was divided into years, each having its special name and divinity—Samvatsara, Parivatsara, Idāvatsara, Anuvatsara, Udavatsara (the divinities being respectively Fire, Sun, Moon, Creator, Rudra)—so the greater cycles afterwards employed by the astronomers were divided in the same way.

3. Apart from these cycles, two popular methods of reckoning are known, one of which is the Kali-cycle, already alluded to. Another, confused with it, is called the cycle of the 'Seven Seers' (*i.e.* the stars of the Great Bear), which are supposed to change their position once in a century, according to the asterism in which the Seers are situated. Thus, as there are twenty-seven asterisms, this cycle consists of 2700 years. Mediæval historians equated this cycle, which was a popular one, with their more learned reckoning. So Kalhaṇa says that the 24th year of the 'people's era' is identical with Śāka year 1070. The popular belief was that the Seven Seers had been for seventy-five years in the asterism Maghā when the Kali-age began. The cycle of the Seven Seers is carried back to a date corresponding with the year 4077 B.C.

The astronomical cycles known as 'eras of Jupiter' (the planet Bṛhaspati) are two, one of one revolution of the planet, that is, of twelve years, in which each year is called after the asterism in which Jupiter heliacally rises, and one of five revolutions, that is, of sixty years, in which the first year corresponds with the initial year of the Kali-cycle. In the South this era is regarded as identical with the solar year. There are locally known other cycles of less importance, such as the 1000-year cycle of Paraśu-Rāma, recognized in the South, but known in the North, even to astronomers, only by name. The only one of these cycles which can claim a respectable antiquity is the sixty-year Jupiter cycle, which perhaps reverts to a time antecedent to the beginning of the Christian era.

LITERATURE.—H. H. Wilson, *Select Works*, ii., London, 1862, ch. iv. 'Religious Festivals of the Hindus'; Natesa Sastri, *Hindu Feasts, Fasts, and Ceremonies*, Madras, 1903; W. J. Wilkins, *Modern Hinduism*[2], Calcutta, 1900; Monier-Williams, *Hinduism*, London, 1877; F. K. Ginzel, *Handbuch der mathematischen und technischen Chronologie*, Leipzig, 1906 ff., i. 310–402; E. W. Hopkins, *Religions of India*, Boston, 1895 (previous literature cited on pp. 448 and 592); J. C. Oman, *Brahmans, Theists, and Muslims of India*, London, 1907 (esp. p. 241 ff., 'The Holi Festival'); and for special festivals, A. Hillebrandt, 'Die Sonnwendfeste in Alt-Indien,' in *Roman. Forschungen*, v. [1889] 299–340, and *Vedische Opfer und Zauber*, Strassburg, 1897 (=*GIAP* iii. 2); B. Lindner, 'Das ind. Ernteopfer,' in *Festgruss an Böhtlingk*, Stuttgart, 1888, pp. 79–81; J. Jolly, *Recht und Sitte*, Strassburg, 1896 (=*GIAP* ii. 8).

E. WASHBURN HOPKINS.

[1] A sectarian distinction. This is not the place to discuss the probability of any of these dates being correct historically. Another common political era is that of the Guptas, probably identical with the Vallabhī era, A.D. 319.

[2] For details, see art. AGES OF THE WORLD (Indian), in vol. i. p. 200. After the Hindus came in contact with foreign teachers, from whom they were ever prone to learn, they acquired the knowledge of the precession and then developed the monstrous system of æons, *kalpas*, and *manvantaras*, known to the Purāṇas, according to which even one age includes 4,320,000 years.

[3] The relations between the Hindu 'moon-stations' and the Chinese *Sieu* are not yet determined. The Arabs probably borrowed their *Manāzil* from the Hindus, who, however, could not have borrowed their (lunar) zodiac from the Babylonian solar zodiac. Strictly speaking, only a few of the constellations represent *zoa*. The first, corresponding to stars in Aries, is called 'Horse (head)'; the third is (Pleiades) 'six nymphs'; the fourth (al-Debaran) is called 'Rohiṇī's wain'; the fifth (three stars in the head of Orion) is the 'antelope's head,' etc. For the difficult problem in regard to the origin of the moon-stations in India, see Burgess, *Sūrya-Siddhanta*, 1860; Colebrooke, *Essays* (ed. Cowell, 1873), ii. 281; and Müller, *India, What can it teach us?*, 1883.

[1] See Jacobi, *Ueber das Alter des Rig-Vedas*, 1893; Tilak, *Orion*, 1893. The conclusion of these scholars was that the Vedic literature must be at least as early as the third millennium before our era, and the data of the Rigveda itself point to the fifth millennium, so that Vedic literature in general would lie between 4500 and 2500 B.C. This conclusion, however, has not been generally accepted.

FESTIVALS AND FASTS (Iranian).—The extant Avesta contains no specific information regarding festivals, and Pahlavi literature is almost equally silent. Nevertheless, the *Dinkarṭ* states (VIII. vii. 1, 3, 8, xxix. 8, 10, xlv. 4, tr. West, *SBE* xxxvii. [1892] 15 ff., 95, 167) that the lost Avesta Pājag, Hūspārām, and Hādhōxt Nasks discussed, among other matters,

'whatever is about a season-festival; where the appointed place is, when one celebrates it, and when it has fully elapsed; the assembly of the season-festival, and the donation for the feast; where and when the celebration is possible, in what proportion the provisions are to be given out, and when to be prepared and divided; where its advantage is, and what benefit there is from it to the good creations both spiritually and materially.' The sinfulness of a failure to celebrate the season-festival is also considered in the *Dīnkarṭ*, and there are a number of minor allusions to the festival in Pahlavi, such as *Dīnā-i Mainōg-i Xraṭ*, iv. 5, lvii. 18, *Šāyast lā-Šāyast*, xii. 19, xiii. 29, xviii. 3 f., xix. 4.

Besides the season-festivals, we find allusions to the days of the guardian spirits in *Bahman Yašt*, ii. 45, *Šāyast lā-Šāyast*, x. 2, xii. 31, *Sad Dar*, vi. 2.

The 'season-festivals' here mentioned are the *gāhanbārs* (the 'yearly'—*yāirya*—divinities of *Yasna* i. 9, ii. 9, *Visp.* i. 2, ii. 2), which have been considered in art. CALENDAR (Persian); and the 'days of the guardian spirits' constitute the festival of Fravardigān (on which see *ERE* i. 455, iii. 717b; also art. FRAVASHIS).[1] There is also some reason to believe that there were four lunar festivals in each month. In *Yasna* i. 8 (so also ii. 8, *Yašt* vii. 4) occur the words, *nivaēdhayemi hankārayemi māhyaēibyō ašahe ratubyō antare-manhāi . . . perenō-manhāi višaptathāiča*, 'I dedicate, I perform (the sacrifice) for the month (gods), the time-divisions of Aša, for the between-moon [*i.e.* the new moon], . . . for the full moon, and for the intervening seventh(s)'—in other words, for the first, eighth, fifteenth, and twenty-third days, which, as has been seen in CALENDAR (Persian), were all dedicated to Ahura Mazda (cf. also Bartholomae, 1472).

Our chief knowledge of the Zoroastrian feasts is derived, not from Avesta or Pahlavi texts, but from Perso-Arabic authors, the most important of whom, in the present connexion, is al-Bīrūnī (*Chronology of Ancient Nations*, tr. Sachau, London, 1879).

In each month an especially sacred day was the one now called *jašn* (Av. *yasna*, 'praise'), on which the month-name coincides with the day-name, as the day Fravarṭīn of the month Fravarṭīn.

The *jašns* are, accordingly, the 19th day of the 1st month, the 3rd of the 2nd, the 6th of the 3rd, the 13th of the 4th, the 7th of the 5th, the 4th of the 6th (also called *Ādhar-čašn*, 'feast of fire' [al-Bīrūnī, 207; cf. also next paragraph]), the 16th of the 7th, the 10th of the 8th, the 9th of the 9th, the 1st, 8th, 15th, and 23rd of the 10th (cf. the lunar feasts noted above), the 2nd of the 11th, and the 5th of the 12th.

Various legends and popular usages are connected with a number of the *jašns*, among which al-Bīrūnī includes the following: Tīragān, 13th day of the 4th month (205 f.); Mihrajān, 16th day of the 7th month (207–209); Ābānajān, 10th day of the 8th month (210); Ādhar-čašn, 9th day of the 9th month (211; according to Zādawaihi, as quoted by al-Bīrūnī, 207, this name was also applied to Šahrīvaragān, the 4th day of the 6th month [see preceding paragraph], this statement, if correct, probably being due to the retrogression of the calendar); Xurram-rūz, 1st day of the 10th month (211 f.); and Isfandārmadh-rūz, 5th day of the 12th month (216 f.). This list may be supplemented by a Parsi-Persian text made accessible by Unvala (*Spiegel Memorial Volume*, Bombay, 1908, pp. 201–210), which also describes the customs connected with Tīragān and Ābānajān, as well as with Bahmanjanah, the 2nd day of the 11th month. For the modern Indian Parsi celebration of the chief *jašns*, see Karaka, *Hist. of the Parsis*, i. 150–152.

There is reason to believe that at least some of the *jašns* were originally far more important than any of the extant texts imply, for they have given names to several months in Iranian systems outside the Zoroastrian series. Thus Tīragān (the 13th day of the 4th month) serves to designate the 4th month of the Seistanians, Tīrkayān-vā (Marquart, *Untersuchungen zur Gesch. von Eran*, Göttingen and Leipzig, 1896–1905, ii. 199), particularly as this was the month of the summer solstice (cf. Tīr, 'Sirius'); the great feast of Mihrajān (on which see below) gives its name to the 7th month of the Sogdians, Baghkānj (Marquart, i. 64, ii. 129, 198; Müller, *SWAW*, 1907, p. 465; Gray, *JAOS* xxviii. [1907] 338),[1] and of the Armenians, Mehekan; and Ādhar-čašn (*i.e.* *Ādharagān, the 9th day of the 9th month) to the 9th month of the Seistanians, Ārgayān-vā (so reading, with Marquart, i. 64, ii. 199, instead of the Ārkabāz-vā or Ārkayāz-vā of al-Bīrūnī, 53, 82), and of the Armenians, Ahekan (Hübschmann, *Armen. Grammatik*, Leipzig, 1897, i. 95).

The two great festivals of the Zoroastrians are the New Year (Naurūz) and the Feast of Mithra (Mihrajān), both of which last six days, the number perhaps being based on the six *gāhanbārs*. The first day of the New Year was called Naurūz-i 'Āmma ('of the people') or Kūčak ('little'), and the sixth was Naurūz-i Ḫāṣa ('noble') or Buzurg ('great'). The general scheme of celebration, according to al-Bīrūnī (203 f.), was as follows:

'In these five days it was the custom of the Kisrās [Persian kings] that the king opened the Naurūz and then proclaimed to all that he would hold a session for them, and bestow benefits upon them. On the second day the session was for men of high rank, and for the members of the great families. On the third day the session was for his warriors, and for the highest Maubadhs [priests]. On the fourth day it was for his family, his relations and domestics, and on the fifth day it was for his children and clients. . . . When the sixth day came and he had done justice to all of them, he celebrated Naurūz for himself and conversed only with his special friends and those who were admitted into his privacy.' For various legends connected with Naurūz, see *ib.* 199–204; Hyde, *Hist. religionis veterum Persarum*, pp. 236–238; Unvala, 203–205; for the modern usages, Karaka, i. 144–146; Jackson, *Persia Past and Present*, New York, 1906, p. 99 f.; for the special importance of the concluding day and for the legends connected with it, see the Pahlavi *Māṭigān-i Māh Fravarṭīn rōj Xūrdaṭ*, tr. Asana, *Cama Memorial Volume*, Bombay, 1900, pp. 122–129; for the third day, see Karaka, i. 145 f.

The second great festival was Mihrajān, the celebration of which, according to the ideal Avesta calendar, should begin 7th Sept. The near approach of Mihrajān to Naurūz in honour is well illustrated by a saying of Salmān al-Fārisī, cited by al-Bīrūnī (208):

'In Persian times we used to say that God has created an ornament for His slaves, of rubies on Naurūz, of emeralds on Mihrajān. Therefore these two days excel all other days in the same way as these two jewels excel all other jewels.'

This festival, like that of Naurūz, lasted six days, the first being Mihrajān-i 'Āmma and the last Mihrajān-i Ḫāṣa, while, again, like Naurūz, the celebration was at one period spread over thirty days, the first five being, according to al-Bīrūnī (203), 'feast days for the princes, the second for the nobility, the third for the servants of the princes, the fourth for their clients, the fifth for the people, and the sixth for the herdsmen.' Thus, instead of each of the six *gāhanbārs* being represented by only one day of the festival, it was at one time honoured both at Naurūz and at Mihrajān by a period of five days.

While we may disregard the numerous legends connected with Mihrajān (al-Bīrūnī, 207–209; Hyde, 245–248; Unvala, 207; Mas'ūdī, *Prairies d'or*, ed. and tr. Barbier de Meynard, Paris, 1861–77, iii. 404; Nuwairī, quoted by Golius, *Notæ in Alferganum*, Amsterdam, 1669, p. 23), the problem of its origin cannot so summarily be dismissed. The festival has given its name to the seventh Armenian

[1] The view of Lagarde (*Purim*, Göttingen, 1887) that Fravardigān was the origin of Purim has long been discarded; and equally suspicious is the theory of Scheftelowitz (*Arisches im AT*, Berlin, 1901–03, i. 49 f., ii. 44–48) that פור is borrowed from O. Pers. **frava* = Avesta *fravi*, 'luck' (?), particularly as the Avesta word probably means 'thriving, growth, prosperity' (Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, col. 991).

[1] On *bagha*, 'god,' as a synonym for Mithra, see Marquart, i. 64, ii. 129, 132–134.

month, Mehekan (Hübschmann, i. 95),[1] and it was evidently known to the Persian kings, as is clear from the statement of Strabo (p. 530) that the satrap of Armenia sent the Persian monarch 20,000 colts annually at the *Μιθράκανα*. Mihrajān and Naurūz were the two times at which the earlier Sasanian kings gave public audiences (Christensen, *L'Empire des Sassanides*, Copenhagen, 1907, pp. 58, 73 f., 98); and it should also be noted that, according to Ctesias and Duris of Samos (*apud* Athenæus, x. 45), the Mihrajān was the one occasion on which it was permissible for the Persian king to become intoxicated and to dance the national Persian dance.

The remarkable parallelism between Naurūz and Mihrajān finds its very simple explanation in the fact that *both* were New Year festivals. Similar double beginnings of the year existed among the Babylonians (*ERE* iii. 74^a, 76^a) and the Hebrews (Ex 23^{16} 34^{22}: 12^{18}), and Marquart has argued (ii. 206–212) with good reason that the Avesta year originally began about the time of the autumnal equinox, and that during the closing years of the reign of Darius I. (522–486) it was changed to conform with the regular Bab. year, thus commencing about the vernal equinox.[2]

The remaining festivals of the Avesta year may be discussed more briefly. On 17th Fravartīn was the festival of Zamzamah ('muttering'), on which Sraoša was held to have revealed the murmuring required in reciting the liturgy, as well as in speaking, in case words became absolutely necessary, during eating (al-Bīrūnī, 204; Hyde, 241). The 6th Tīr was the Čašn-i Nīlūfar ('feast of the water lily'), a festival considered by al-Bīrūnī (205) to be of recent date (Hyde, 243, puts it on 17th Amerōdaṭ). The 8th (more probably the 18th; cf. Unvala, 208) Šatvairō was Ḫazān ('autumn'), an autumn feast (Hyde, 244), which also gave its name to the eighth month of the short-lived calendar of Yazdagird III. (*ib.* 197). The 1st Mitrō was Ḫazān-i digar ('second autumn'), a feast for the common people, 'because on that day the work of sowing seeds and cultivation was completed' (Unvala, 208; al-Bīrūnī, 207).

A feast of special interest as being, in all probability, a survival of an ancient Bab. custom was celebrated on the 1st Āṭarō, the Rukūb al-Kausaj or Kūsah barnišīn ('the ride of the thin-bearded'), which was apparently observed also as a popular feast of rejoicing at the departure of winter and the coming of spring, so that al-Bīrūnī (p. 211) calls it Bahār-čašn ('spring-festival').

This festival is described, with trifling variations, as follows (Hyde, 249–251; Unvala, 208; al-Bīrūnī, 211; Mas'ūdī, iii. 413 f.; Anquetil du Perron, *Zend Avesta*, ii. 580 f.). A thin-bearded (or toothless) man rode (naked, in some accounts) on a horse (or ass), holding a fan in his hand and complaining of the heat. Escorted by the servants of the king or governor, he rode through the city, the target for snow and ice, but the recipient of hot foods. In his other hand he held a crow or, according to other accounts, an earthen pot full of reddened water, with which, as also with mud and filth, he bespattered those who refused him the dirham which was his due from each shopkeeper. If he was delayed an instant in receiving his tribute, he had the right to seize everything in the shop. The dirhams which he received between the time of his starting out and the first prayers (7 a.m.) he must give to the king or governor; those which he received between the first and second prayers (11 a.m.) were his own property; after the second prayers he might be beaten with impunity.

Here the facts that (*a*) the chief figure in the 'ride of the thin-bearded' was escorted by the servants of the king or of the governor; that (*b*) between the first and second prayers he could exact tribute from every shopkeeper, and, if refused, could seize all in the shops of the recusants and could inflict punishment upon them; and that (*c*) his authority was shortlived, since he could be roundly flogged after his brief tenure of power, all point to his original identity with the condemned criminal who enjoyed a brief reign during the Bab. Sacæa. Anquetil du Perron (ii. 581) had already suggested that the 'ride of the thin-bearded' had perhaps taken the place of the Sacæa, and the two celebrations have also been connected by Lagarde (51 ff.), and especially by Frazer (GB^3 iii. 181–184). It seems, on the whole, most probable to hold, with Meissner (*ZDMG* l. [1896] 296 ff.), Winckler (*Altorient. Forschungen*, II. ii. [1900] 345), Brockelmann (*ZA* xvi. [1902] 391), and Frazer (*Dying God*, London, 1911, pp. 115–117), that the Sacæa was connected with the Bab. New Year, *Zagmuk*; and it is of particular interest to note that at Zela, in Pontus, where the Sacæa was still celebrated in Strabo's time (p. 512), the ruler had formerly been a priest-king (p. 559, *καὶ ἦν ὁ ἱερεὺς κύριος τῶν πάντων*).

This interpretation of the Sacæa seems to the present writer to be preferable to the theory of Gelzer (*ZÄ* xiii. [1875] 14 ff.), Justi (*GIrP* ii. 412), Prášek (*Gesch. der Meder und Perser*, Gotha, 1906–10, ii. 218), Zimmern (KAT^3 384, note 4, 427, 516), and Jeremias (PRE^3 xii. 644), that the feast (on which see Berosus, *apud* Athenæus, xiv. 44; Dio Chrysostom, *Orat.* iv., ed. Dindorf, 76, and the euhemerized account of Strabo, p. 512) was an Ištar-Anaitis festival. This hypothesis leaves the most characteristic features of the Sacæa unexplained, although in its favour may be urged the fact that the great festival of Ištar was celebrated in Āb, which is usually regarded as corresponding to the month of Loos, and the statements of Strabo, which also connect the feast with Anaitis. On the other hand, calendrical retrogression may explain some of the chronological difficulties connected with the date of the celebration of the Sacæa (we know, for example, that in 229 B.C. Loos fell, not in Āb, but in Tammūz [Robertson Smith, *apud* Frazer, GB^2 ii. 254, note 1]); and, even if Loos be equated with July–August, we are told that both the Sogdian and the Chorasmian year began in July (al-Bīrūnī, 220, 223), as did the Armenian (*ERE* iii. 70^b). It seems, on the whole, safe to conclude that the Persian 'ride of the thin-bearded' is the vernal counterpart of the (originally) autumnal Babylonian Sacæa, and that it represents a direct descendant of the Bab. festival of the *Zagmuk*.

The 11th Dīn is regarded as the anniversary of the death of Zarathushtra (Karaka, i. 149). The 14th Dīn (according to Hyde, 254, the 24th) was Sīr-savā ('garlic feast'), when garlic was eaten as an apotropæic (al-Bīrūnī, 212). The 5th Vohūman was Barsadhaq ('above *or* new Sadhaq'), five days before Sab sadhaq (*Canon Masudicus*, quoted by Sachau, *Chronol.* 424).

The latter feast ('night of the bonfire') was falsely understood to be the 'hundredth night' (Pers. *sadah*, from which the Arab. *sadhaq* is borrowed, being taken as equivalent to *sad*, 'hundred'). Sab sadhaq was originally the feast of fire *par excellence* (*Šāh-nāmah.*, tr. Mohl, Paris, 1876–78, i. 26 f.), and its great importance at one period is shown by its frequent mention side by side with the feast of Naurūz (*ib.* v. 73, 284, 448, 551, vi. 109, 506, vii. 27, 327, 374; for other legends, etc., see al-Bīrūnī, 213 f.; Hyde, 254–257 [where it is wrongly identified with the winter solstice]; Unvala, 209 f.; Golius, 37–39). On this night blazing

[1] There is, however, no reason to suppose that the name of this feast appears in the Persian region of Mihrjān-qadhaq (Armen. Mihrakan-k'atak, Syr. Mihragān-qadaq), which was the see city of an East Syrian diocese in A.D. 577 (cf. Marquart, *Ērānšahr*, Berlin, 1901, p. 20; Justi, *Iran. Namenb.*, Marburg, 1895, p. 214).

[2] As supplementary to art. CALENDAR (Persian), it should be noted that Marquart derives the Zoroastrian and Armenian custom of naming each day instead of numbering it—a practice also found in Polynesia (*ERE* iii. 132 f.)—from Egypt, where the days also had names, though these designations merely meant 'the celebration of so-and-so,' and have no real analogy with the Iranian system (Brugsch, *Thesaurus*, Leipzig, 1883, i. 45–54, *Ägyptol.*, Leipzig, 1891, p. 332 ff.; cf. al-Bīrūnī, 58); and it is now certain that the order of O. Pers. months given by Prášek (*Klio*, i. [1902] 26–50) and King and Thompson (*Inscrip. of Darius the Great*, London, 1907, p. xxxviii), whereby Garmapada comes after Thāigarči (*ERE* iii. 128), is correct; for Tolman (*Amer. Journ. of Philol.* xxxii. [1911] 444 f.) has shown, by a comparison with the fragments of the Aramaic version of the Behistun inscription (Sachau, *Aram. Papyrus und Ostraka*, Berlin, 1911, no. 62), that Garmapada can correspond only to Tammūz. The attempt of Weissbach (*ZDMG* lxii. [1908] 633 f.) to prove Garmapada the first month must be regarded as erroneous, while his equation of Margazana with the eighth month (637) is nullified by the Armenian name of the eleventh month, Margaç, which is borrowed from the O. Pers. name (Marquart, i. 64, ii. 182).

fires were lighted, and cattle and birds were driven into the flames, fettered with dry herbs and the like, so that they might speedily escape. The festival falls five days before the middle of winter, and the fires may have been kindled to hasten, by sympathetic magic, the slowly increasing length of the sun's warm activity, as well as to purify the creatures that passed through them.

The 22nd Vohūman was Bādh-rūz ('wind day'), and was probably connected with the Sogdian Bādhāghām, which was celebrated on the 24th of the corresponding month (al-Bīrūnī, 222). The feast was also called Bādh-i barrah ('lamb's wind'), because of a tradition that on this day a wind blew, after seven years of windlessness, with sufficient force to move the wool on a lamb (Unvala, 210). The 30th Vohūman was celebrated at Isfahan as the Āfrījagān ('outpouring of water'), a rain-festival which, according to some authorities, coincided with Tīragān (Hyde, 243; Unvala, 206), or, according to others, fell on 20th or 30th Horvadaṭ (Hyde, 242); probably, as Hyde remarks, the day of celebration varied in different localities. The 5th Spendarmaṭ was the Jašn-i Barzgarān ('feast of cultivators'), on which charms are prepared for the extermination of hurtful creatures (for specimens, see Modi, *JASB* v. [1901] 398–405 = *Anthropolog. Papers*, Bombay, 1912, pp. 122–130). This feast Anquetil du Perron (ii. 576–578, where, however, it is wrongly set on the 15th) connects with the festival which Agathias (ii. 59) calls *ἡ τῶν κακῶν ἀναίρεσις*, when as many snakes and other noxious creatures as possible were killed and brought to the priests (*τοῖς μάγοις*) as a proof of hatred of Ahriman. The day following is a celebration called Misk-i tāzah ('fresh musk'; al-Bīrūnī, 217). On the 19th Spendarmaṭ fell Naurūz anhār u miyāh jārī ('new year of rivers and running waters'), when rose-water, perfumes, etc., were cast into the streams (al-Bīrūnī, 217; Hyde, 260); and on the 25th–30th (according to others, only on the 30th) came the Mard-gīrān ('man-seizure'), when the women could lord it over the men and take from them what they would (Hyde, 259).

This festival bears considerable resemblance to the later form of the celebration of the Sacæa, when, according to Berosus, masters were ruled for five days by their servants, one of whom wore a quasi-royal robe (*στολὴν ὁμοίαν τῇ βασιλικῇ*), called *ζωγάνη* (a word held by Meissner, 298, note 2, to represent Assyr. *šaknu*, Heb. סָגָן, 'prefect, ruler'), and was in control of the house (*ἀφηγεῖσθαί τε τῆς οἰκίας*). Since, however, the celebration of Mard-gīrān was separated from that of Rukūb al-Kausaj, which we have seen to be a New Year festival connected with the Sacæa, by three instead of by six months, any association of the 'man-seizure' with the Sacæa seems improbable. If the Rukūb al-Kausaj was a spring-festival, the Mard-gīrān must have been a celebration of the summer solstice. The month of celebration is curiously identical with the Jewish Purim on 14th Adar, but the identity of month is doubtless merely fortuitous, and no connexion can safely be alleged between the two feasts.

The Gemara to Mišna III. of the Talmudic treatise '*Aboda zara*, i. (11[b] of Babli, 39[c] of Yerušalmi) mentions four feasts of the Persians which are of interest as showing what ones were at that period regarded as of most importance. The list given in Yerušalmi is the more accurate: נירדי, מירייסקי, מתירקנה, and מחורי (for the variants, see Jastrow, *Dict. of the Targumim*, etc., London, 1886–1903, pp. 741, 534, 739). The first and the third name clearly stand for Naurūz and Mihrajān; the second doubtless represents Tīragān (on the probable early importance of this feast as that of the summer solstice, see above, p. 872[b]); and the fourth may be conjectured to stand for Xurram. These would then represent the four seasonal festivals as celebrated at the time of the composition of the *Aboda zara*.

Our information concerning specifically Persian feasts is scanty. We know that each Persian celebrated his own birthday with a feast (Herod. i. 133), and that the king also gave on his birthday a banquet called *τυκτά* (connected with Av. *taoxman*, 'seed'; O. Pers. *taumā*, 'family'; Skr. *tuc*, *tuj*, *toka*, 'posterity'; Jackson, *JAOS* xx. [1899] 57), on which he was bound to grant every request (Herod. ix. 110), while other festivals celebrated the king's marriage (Est 2[18]; Josephus, *Ant.* XI. vi. 2) and the birth of his first son (Plato, *Alcibiades I.*, 121 C).

A Persian festival of much importance was the Magophenia. According to the usual view (Herod. iii. 79; Ctesias, *apud* Photius, *Bibl.* xxxviii.; Agathias, ii. 25), this was a celebration of the slaying of the Magian Gaumāta, the pseudo-Smerdis, by Darius (cf. *Behist.* i. 35–71), and then 'no Magian may appear in the light, but the Magians keep themselves in their houses that day.' This view, maintained by Spiegel (*Erân. Alterthumskunde*, ii. 310, iii. 586–708), Christensen (15 f.), and Meyer (*EBr*[11] xxv. 253), is attacked by Marquart (i. 64, ii. 132, 135; so also Prášek, ii. 140), who holds that *Μαγοφόνια* is a corruption of O. Pers. **Bagakāna*,[1] and that it is identical with the feast of Mihrajān, considered above, especially as the uproar (*θόρυβος*) lasted five days (Herod. iii. 80) after the death of Gaumāta, who was killed on 10th Bāgayādi (*Behist.* i. 55–57), the month which corresponds to the Zoroastrian month Mitrō.

Despite the cleverness of this suggestion, it seems open to objection. Marquart is certainly right in identifying the Magophonia with the old New Year feast of Mihrajān, and it is almost certain that the O. Pers. year originally began with Bāgayādi ('[month] of the honouring of the god [Mithra]'), just as the Avesta year at first commenced with the corresponding month Mitrō; though later the O. Pers. New Year was changed to a month of unknown name[2] corresponding to the Avesta Fravarṭīn and the Bab. Nīsan. It seems most plausible to hold, therefore, that it was under the cover of an old festival of uproarious character[3] that they were enabled to kill the usurper, their fury both leading them and inciting the other Persians to slay every Magian they could find (Herod. iii. 79); so that the later celebration to commemorate the slaying of the pseudo-Smerdis came to obscure the real origin of the festival in the popular consciousness.

Why the Magi, so universally honoured in Iran, were obliged to keep within doors during the Magophonia has been a hard problem on the basis of the current explanation; but if, as Marquart holds, it was originally a New Year celebration, to be connected with the Mihrajān, which was also a New Year feast, it may probably be connected further with the Sacæa, which, from the statements of Dio Chrysostom and Berosus, was almost certainly a New Year festival, the prominent feature of which was the killing of a criminal who had for five days been permitted to wear royal robes, to sit on the royal throne, and empowered not only to issue whatsoever mandates he would, but even to consort with the royal concubines, and who, after his brief tenure of office, was scourged and hanged, so that the Sacæa probably represents, in attenuated form, the wide-spread practice (found also in Babylonia) of killing the priest-king (cf. Frazer, *Dying God*, 113–117; against this theory see Lang, *Magic and Religion*, London, 1901, p. 118 ff.). It would then follow that the origin of the Magophonia was the actual killing of a Magus

[1] On Or. Μεγα as the representative of Pers. *Baga* in proper names, see Justi, 56 f., 59; cf. also the Turfān name, *Baghkānj*, for the month corresponding to the O. Pers. month Bāgayādi.

[2] It may be conjectured, from various names of the first month—Chorasmian Nāusārji, Sogdian Nūsard, Armenian Navasard, Albanian Navasardus, and the gloss of Johannes Lydus, xxxix. 13, *νέον σάρδιν τὸ νέον ἔτος*—that the opening month of the O. Pers. year was *Navathard(a) ('new year').

[3] The writer is informed by Prof. A. V. W. Jackson that he has long held a similar opinion.

who was at the same time both priest and king. This explains why the Magians were both reverenced and also liable to be killed, although long before the historical period the actual killing had been abandoned, and the festival survived merely in a season of merriment, during which the Magi were perhaps the butt of practical jokes and prudently remained indoors. The success of the attack of Darius and his comrades on the pseudo-Smerdis was very likely due in great part to the fact that Gaumāta was himself a Magian; and later, as already noted, the Magophonia was rationalized to commemorate this event, just as in Strabo's day the Sacæa itself had come to be reinterpreted as commemorating a victory over the Scythians (Σακαί) which may, indeed, have been won at the time of the celebration of the ancient festival of the Sacæa, after it had long since lost its primal signification. The meaning of the word Μαγοφόνια, is, therefore, probably 'Magus-slaying,' representing an O. Pers. **Magujaniya*; and the festival was originally a New Year celebration during which the priest-king was slain.

The four season festivals may, accordingly, be summarized as follows:

Autumnal equinox: (Sacæa), Magophonia, Mihrajān.
Winter solstice: Xurram.
Vernal equinox: (Zagmuk), Rukūb al-Kausaj, Naurūz.
Summer solstice: Tiragān, Mard-girān.[1]

The feasts of the Sogdians and Chorasmians are listed by al-Bīrūnī (221–226), the principal festivals—so far as either their names or their celebrations are known—being the following:

New Year's day; 28th day of the 1st month, local Sogdian feast of the Bukhārā Magians at the village of Rāmuš; 1st day of the 3rd month, Chorasmian beginning of summer; 7th day of the 4th month, local Sogdian feast at Baikand; 15th day of the 4th month, Sogdian eating of leavened bread after a fast (read غمش instead of عمس [?]); among the Chorasmians this day was Ajghār ('firewood and flame'), since in former times it had marked the approach of autumn; 18th day of the 5th month, Sogdian Bāba (or Bāmī) Xᵛāra, marked by drinking good, pure must; 1st day of the 6th month, Chorasmian Faghrubah, when the king went into winter quarters; 3rd and 15th days of the 6th month, Sogdian fairs, the latter lasting seven days; 1st day of the 7th month, Sogdian Nīmsarda ('half of the year') and Chorasmian Azdā Kand Xᵛār, or 'eating of bread prepared with fat' (as a protection against the cold); 2nd day of the 7th month, Sogdian feast of eating cakes of millet-flour, butter, and sugar; 13th day of the 7th month, Chorasmian Čīrī-rōj ('day of Tīr'), venerated by the Chorasmians just as was Mihrajān by the Persians; 21st day of the 7th month, Chorasmian Rām-rōj ('day of Rām'); 5th–15th days of the 10th month, a Sogdian feast of which neither name nor particulars are given; 11th day of the 10th month, Chorasmian Nīmḫab, which, if it may be read Nīmšab (نيمشب instead of نيمخب), 'half-night,' probably refers to the vernal equinox (according to al-Bīrūnī, 223, 220, 'the beginning of their summer was the 1st of Nāusārjī'); 24th day of the 11th month, Sogdian Bādhāghām (see above, p. 874ᵃ); 10th day of the 12th month, Chorasmian Waxš-angām, in honour of 'the angel [Waxš] who has to watch over the water, and especially over the river Oxus'; 30th day of the 12th month, beginning of the Sogdian and Chorasmian feast for the dead.

Some special feasts introduced in the Muhammadan period (al-Bīrūnī, 217), as well as the mythical festivals recorded for the 'Sipāsīān' by the *Dābistān* (tr. Shea and Troyer, Paris, 1843, i. 63), may be disregarded here.

The antithesis of feasting, fasting, is absolutely forbidden by Zoroastrianism. According to *Sad Dar*, lxxxiii., 'it is requisite to abstain from the keeping of fasts' (*rūzah-dāštan*), for

'in our religion, it is not proper that they should not eat every day or anything, because it would be a sin not to do so. With us the keeping of fast is this, that we keep fast from committing sin with our eyes and tongue and ears and hands and feet. . . . That which, in other religions, is fasting owing to not eating is, in our religion, fasting owing to not committing sin.'

To this al-Bīrūnī (217) adds that 'he who fasts commits a sin, and must, by way of expiation, give food to a number of poor people.' The reason for the prohibition of fasting lies, not merely in the entire Zoroastrian outlook upon the universe, but in the idea that it is as wrong to torture oneself as any other being of the good creation (cf., further, Modi, *Catechism of the Zoroast. Religion*, Bombay, 1911, p. 35 f.). The Mandæans understand fasting in a very similar sense, and polemize against Christian fasts (Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 93, 143 f.; K. Kessler, *PRE*[3] xii. 173 f.); so also the Yezīdīs (Brockelmann, *ZDMG* lv. [1901] 388 f.); while, on the contrary, fasting formed part of the Sogdian religion (al-Bīrūnī, 221; cf. also above, pp. 760ᵇ, 765ᵃ).

LOUIS H. GRAY.

FESTIVALS AND FASTS (Jain).—There is, perhaps, no shorter road to the understanding of a religion than to study its festivals and fasts, the occasions on which it rejoices, and the things over which it mourns. This is certainly the case with Jainism—a religion which lays special stress on outward observance.

1. Pajjusaṇa.—Amongst all their holy seasons none is regarded by the Jains as more sacred than the closing days of their religious year, when the ascetics and laity of all three sects observe the solemn fast of Pajjusaṇa. At this time they confess the year's misdeeds, and especially those against *ahiṁsā* (non-killing), one of the main tenets of the Jain creed. Mahāvīra, their great religious leader, decreed that Pajjusaṇa should begin 'when a month and twenty nights of the rainy season had elapsed,'[1] his reason apparently being that the lay people would by that time have prepared their houses to brave the elements; and business, too, being less brisk, they would be at liberty to attend to their religious duties. It is a convenient season for the ascetics also, who during the rains give up for a time their peregrinations, lest they should injure any of the abundant life, animal or vegetable, then springing into being.

The fast nowadays includes the last four days of the month of Śrāvaṇa as well as the first four of Bhādrapada, *i.e.* it falls usually in August. The Jains say that formerly, instead of eight days, it lasted for one day only, the fifth of Bhādrapada. The Digambara Jains (the sky-clad or naked sect) usually observe seven additional days for worship at the close of these eight fast-days.

The Jains observe the fast with varying strictness: some fast for the whole eight days from all food and water, others only every other day, eating specially dainty food on the alternate days, whilst others, again, fast for thirty days before Pajjusaṇa begins and for its eight days as well, eating nothing, and drinking only hot water or whey.

[1] The difference of 8 months between the celebration of Naurūz (1st Fravarṭin) and Rukūb al-Kausaj (1st Āṭarō), and of 8 months 17 days between the celebration of Tiragān (13th Tīr) and Mard-girān (30th Spendarmaṭ), although the two pairs seem to mark the vernal equinox and the summer solstice respectively, is probably due to the fact that Naurūz and Tiragān were incorporated in the Zoroastrian calendar at its beginning, when they would coincide with the actual periods of the year which they were to celebrate. At a later period, when the calendar had retrogressed 8 months, the popular festivals of Rukūb al-Kausaj and Mard-girān, which had been observed at the vernal equinox and the summer solstice without regard to the theoretical calendar, were inserted on the months and days of the calendar in question on which they happened to fall at the time of their incorporation. Hyde, 254, had already noted the possibility of such insertion of feasts, although his special instance, the festival of Šab sadhaq (on which see p. 873 f.), is incorrect.

[1] *Kalpa Sūtra* (*SBE* xxii. [1884] 296).

During Pajjusana special services are held in the *upāsarā* (monasteries) of the various sects. In those of the Śvetāmbara Jains (the white-clad sect) a well-known monk usually reads from the *Kalpa Sūtra* (one of their famous sacred books); and in those of the Sthānakavāsi (the non-idolatrous sect) readings are given from various books which they consider specially sacred, such as the *Antagaḍa* or some *Life* of Mahāvīra. Only the *sādhus* (ascetics) are given raised seats; but, on agreeing to sit on the floor and to remove leather shoes, the present writer was once courteously admitted to the services. The exposition from the sacred books was of a colloquial character, questions being freely asked and answered, and the preaching *sādhu* generally intoning each paragraph before he expounded it. Noticeable amongst the audience were some laymen wearing only the loin-cloth and scarf which form the scanty dress of the Jain ascetic, their unshaven heads marking them off from the monks present. They were doing *posaha*, *i.e.* they had become monks for the time being, and for twenty-four hours they would not leave the *upāsarā*, but would spend their time in meditation and fasting. *Posaha* may be observed every fortnight; indeed, the *Uttarādhyayana* lays down that the faithful householder 'should never neglect the *posaha* fast in both fortnights, not even for a single night';[1] but there is a special obligation to observe it during the season of Pajjusana. *Posaha* was, according to the *Sūtrakṛtāṅga*, specially instituted for those who said that 'we cannot, submitting to the tonsure, renounce the life of a householder and enter the monastic state, but we shall strictly observe the *posaha* on the fourteenth and the eighth days of each fortnight (on the new moon, and) full-moon days,'[2] and who further undertook to keep the five monastic vows of non-killing, truth-speaking, honesty, chastity, and non-covetousness, so far as the exigencies of lay life permitted. *Posaha* well illustrates the special genius the Jain religion has for making the laity feel themselves intimately connected with the monastic order, which largely accounts for its survival in India to-day.[3]

Some Jains, however, find even during the sacred season of Pajjusana that the twenty-four hours' fast from all food and water entailed by *posaha* is too much for them; for these the less exacting fast of *dayā* or *saṁvara* affords a welcome alternative. Those who observe this fast sit in the *upāsarā* and listen and meditate for any period they like to choose, from ten to twenty-four hours, but they may take food and water at will, provided that the water be hot[4] and the food not specially prepared for them.

Saṁvatsari, the last day of Pajjusana and the last day of the Jain religious year, is the most solemn day of all. Every adult Jain must fast throughout the day, abstaining even from water; the *upāsarā* are more than filled, and gatherings of devout Jains are also arranged in secular buildings, such as the verandahs of schools or the dining-halls of various castes. On the afternoon of this day no ascetics are present at the lay gatherings, but they may be seen in the smaller rooms attached to the *upāsarā*, making their own confessions privately; one notices that the hair has been newly plucked from their heads, for this austerity (peculiar to Jain ascetics) has to be performed before Pajjusana ends.

It is most interesting to visit the various *upāsarās* on this day. Those of the Śvetāmbara sect adjoin their temples, the men and women being in different buildings. The women, bedecked with jewels and arrayed in their brightest clothes, are seated in silence on the floor, with the exception of one woman who may have paid for the privilege of reciting the prescribed *mantras* anything from one rupee upwards. In front of her on a wooden stool is a little tripod from which hangs a rosary of one hundred and eight beads, the number of the qualities of the *Pañcha-parameṣṭi* (the Five Great Ones). On the opposite side of the courtyard adjoining the temple is the men's *upāsarā*, where the laymen are seated, clothed only in their loin-cloths, listening to one of their number reciting *mantras*. In the Sthānakavāsi women's *upāsarā* there was no tripod, but first one woman and then another got up from wherever she might be sitting on the floor and recited *mantras*—a privilege which in this community went by seniority. The Sthānakavāsi men, having been crowded out of their *upāsarā*, were on the verandah of the town school when the present writer saw the ceremony. One of their number was preaching, not merely, as in the other gatherings, reciting *mantras*: he was giving an instruction on the twelve vows of a layman, which corresponded very much to an instruction that might be given on the ethical aspect of the Ten Commandments. In preaching, for instance, on the vow against dishonesty, he showed how this vow would be broken by a shopkeeper over-praising his goods. At the close of the instruction on each vow, the whole audience rose, and in a set form of Māgadhī words confessed their breach of it and asked forgiveness. Although the meetings went on till eight or nine o'clock, no light was permitted. At the close all asked each other's forgiveness for any slights or injuries committed during the year in the following words: 'Twelve months, twenty-four half months, forty-eight and four weeks—if during this time I may have said or done anything annoying to you, pardon me!'

No private quarrel may be carried beyond Saṁvatsari, and letters must be written to friends at a distance asking their forgiveness also. The postal authorities can testify how faithfully this is carried out, for the mail of the Jain community increases extraordinarily at this season of the year.

Kalpa Sūtra procession.—In many towns, on the third day of Pajjusana, the Śvetāmbara community organize a procession in honour of the *Kalpa Sūtra*, a Scripture which they hold in peculiar reverence. Some wealthy Jain, who has outbidden the others when the privilege was up for auction, takes the temple copy of that *Sūtra* (which is preferably written, not printed, and should be illustrated) to his house in the evening. It is placed on a little table and covered with a rich cloth, and all night long the inmates of the house and their friends continue what an English-speaking Jain called 'Harmony-Barmony,' singing songs in its honour and playing on as many instruments as they can get. Next morning the procession is formed to return the book to the temple in state. The details would, of course, vary in different places, but when the writer saw it, it was arranged as follows:

The procession was headed by a drummer on horseback, lent for the occasion by the Rājā, followed by other drummers on foot, who preceded the *indrādhvaja*, a painted wooden trolley surmounted by a gaudy wooden elephant bearing on its back tier upon tier of red and blue flags ornamented with gold brocade. A *pūjari* (officiant), who is generally of the Brāhman caste, followed, bearing a silver mace, and four boys walked behind him carrying smaller silver sticks, their parents having paid heavily for this privilege and the spiritual advantages accruing from it. A portion of the crowd wedged themselves in at this point before the main figure of the procession, the carrier of the *Kalpa Sūtra*, appeared. The proud distinction of being the carrier is accorded to some child connected with the house in which the *Kalpa Sūtra* has been kept. The child, in this case a little girl of seven or eight, arrayed in her gayest silken garment, was seated on a horse; in her hands she held the *Kalpa Sūtra* wrapped in silk, and on the book lay a coco-nut marked in red with the auspicious *Svāstika* sign 卐. She was followed by more of the crowd playing on musical instruments, and by boys who had paid for the honour of carrying the *ārati* lamps which they held in their hands. The last places in the procession were given to groups of women singing songs in honour of the *Kalpa Sūtra*.

Mahāvīra's birthday.—The birthday of Mahāvīra, the founder of Jainism, has been conventionally fixed for the fourth day of Pajjusana (*i.e.* the first of Bhādrapada), though the Śvetāmbaras believe Mahāvīra to have been born on the bright thirteenth of Chaitra. The Sthānakavāsi Jains would like to keep this festival, but their *gurus* discourage them, fearing that it might lead to idolatry. It is observed with great pomp and rejoicing by the other Jains, and the temples dedicated to Mahāvīra are

[1] *Uttarādhyayana* (*SBE* xiv. [1895] 23).
[2] *Sūtrakṛtāṅga*, 17 (*SBE* xlv. 428).

[4] On boiled water, see M. Stevenson, *Notes on Modern Jainism*, p. 27.

decorated with flags. The Śvetāmbaras arrange a cradle procession in honour of the day. This procession very much resembles that of the *Kalpa Sūtra.* The drums, the boys with silver staves and *ārati* lamps, the singing crowds, and the small elephant-trolley are again in evidence; but, instead of the book, the child on horseback carries in the centre of the procession a little wooden cradle covered with gold brocade.

The conventional birthdays of several other *Tīrthaṅkara* are celebrated on various days, when the temples specially dedicated to them are decorated with flags, and the imprints of hands dipped in a red mixture are made on the walls. (The hand, the Jains say, is the special symbol of favour, since it is always used when blessing.) Not only the birthdays but also the days when the various *Tīrthaṅkara* attained *kaivalya* and *mokṣa* are celebrated, the pomp, of course, being all the greater at the actual place where the event is supposed to have happened.

2. Diwālī.—Next to Pajjusaṇa the greatest of all the Jain sacred seasons is Diwālī. If the former owes its importance to the emphasis which Jains lay on the sin of killing, Diwālī derives its position from the importance of wealth to a mercantile community. The Jains assign a special reason for their participation in what is really a Hindu festival in honour of Lakṣmī, the goddess of wealth. They say it originated when Mahāvīra passed to *mokṣa*, and the eighteen confederate kings and others who were present at his passing instituted an illumination, saying: 'Since the light of intelligence is gone, let us make an illumination of material matter.'[1] The festival continues for four days—the last days of Āśvina which close the Hindu year and the first of Kārttika—falling usually within the months of October or November. Amongst the Śvetāmbara Jains, the first day (Dhanaterasa) of the festival is devoted to polishing jewellery and ornaments in honour of Lakṣmī; on the second day (Kālichaudasa) the women try to propitiate evil spirits by giving them some of the sweetmeats they prepare and cook on this day. These they place in a circle at cross-roads (*q.v.*), in order to protect their children from evil influences during the year. The third (Amāsa) is the great day of the feast. It was on this day that Mahāvīra went to *mokṣa*, and Gautama Indrabhūti attained to *kaivalya*. This is the day on which Jains worship their account-books and decorate and illuminate their houses. In the morning, Jains of all three sects go to their monasteries and convents and do reverence to the chief monk or nun present, who preaches to them on the life of Mahāvīra and sings appropriate songs. The more devout lay-people stay and do *posaha*, but the generality go home and make up their accounts for the year. In the evening they summon a Brāhman to direct the *Śāradā pūjā*, or worship of the account-books, for Brāhmans are still the domestic chaplains of the Jains. The Jain having arranged his account-book on a stool, the Brāhman enters and paints a *chāndalo* (auspicious mark) on the Jain's forehead, his pen, and one page of the account-book. He then writes the word *Śrī* (*i.e.* Lakṣmī) on the account-book, either five, seven, or nine times, in such a way as to form a pyramid. A rupee (the oldest possible) is now placed on the book; this rupee for the time being is considered to be Lakṣmī herself, and the placing of it is called *Lakṣmī pūjā.* All the year the owner will carefully guard this particular coin, as it is considered luck-bringing, and will use it again next Diwālī, so that in some Jain families the coin used is of great rarity and antiquity. Besides the coin, the leaf of a creeper is also placed on the account-book, and the Jain waves a little lamp filled with burning camphor before the book, on which he has placed rice, *pān*, betel-nut, turmeric, and various kinds of fruit. The ceremony ends by sprinkling the book with red powder, after which the Brāhman and the Jain feast on sweetmeats. The account-book is left open for several hours, and before closing it they say: *Lakṣa lābha, Lakṣa lābha, i.e.* 'a hundred thousand profits!'

The various Jain conferences are trying to introduce a new *Śāradā pūjā* of their own in which the Brāhman will play a less important part, and the Jain himself do the eightfold *pūjā* to the rupee; but most Jains are content with the old rite. Some of the stricter Sthānakavāsis refuse to have anything to do with either the old or the new rite, regarding both as idolatrous. The Śvetāmbaras light up their temples at Diwālī with little earthenware saucers containing lighted wicks floating in coco-nut oil; but so many insects perish in these unprotected lights that the conferences now object to the custom.

The fourth and last day of Diwālī, New Year's Day, is the first day of the month Kārttika and of the commercial year; and Jains then go and greet all their friends, much as we might on our New Year's Day, and send cards to those who are absent.

3. Saint-wheel worship.—In every Śvetāmbara temple there is a saint-wheel, or *siddha chakra*—a little eight-sided plate made of either brass or silver with five tiny figures. These figures represent 'The Five Great Ones' (*Pañchaparameṣṭi*), whom the Jains daily salute as they tell their beads. First comes the *sādhu*, or ascetic, to whom alone the path to heaven is open without re-birth; then the *upādhyāya*, or preceptor, representing the next stage in the ascetic's onward course, from which he may rise to be an *āchārya*, or head of a body of ascetics; and, lastly, the *siddha*, or being without caste, birth, death, joy, sorrow, or love, whose personality is completely nullified, and who has thus attained the goal of Jain asceticism. In the centre of the plate is a tiny figure of *Arihanta* (the venerable one) which represents the *Tīrthaṅkara*, the chief objects of Jain reverence. Between the figures are written the names of the three jewels of the Jain faith: *Jñāna*, Right Knowledge; *Darśana*, Right Faith; and *Chāritrya*, Right Conduct; and also the word *tapa*, 'austerity,' on which the Jains lay such overwhelming emphasis in their system. This plate, which thus bears on its surface a complete summary of Jainism, is regarded as of such importance that no Śvetāmbara temple is ever without it. Twice in the year, once in Āśvina (September or October) and once in Chaitra (April or May), it is worshipped for eight days by offering the eightfold *pūjā*[1] to it. Once during each of these eight days the saint-wheel is taken outside the town to some spot, probably near a tank or lake, where, before doing the eightfold *pūjā*, they bathe it with water, and this is called *Jalajātrā*, 'water pilgrimage.' This little pilgrimage is accompanied with much rejoicing, and the pilgrims usually celebrate their return home by a feast.

4. Full-moon fasts.—The phases of the moon are watched with the keenest interest by the Jains (as they are, indeed, by all the inhabitants of an agricultural country like India); and four of the full-moon days, or *punema*, are observed as special fasts. On two of these, Kārttika Punema (October or November) and Chaitri Punema (April or May), they go, if possible, on pilgrimage. The favourite places of Jain pilgrimage are the hills of Śatruñjaya (in the State of Pālitāna), Sametaśikhara (Bengal), Girnār (Junāgaḍh), and Mount Abu (Rajputānā); but at these full-moon fasts the place they are most eager to visit is Śatruñjaya. It was on Śatruñjaya, they say, that at Kārttika Punema the two sons of Kṛṣṇa—Drāviḍa and Vāllibilla—

[1] *Kalpa Sūtra* (*SBE* xxii. 266).

[1] For the eightfold *pūjā*, see M. Stevenson, *Notes on Modern Jainism*, p. 103 ff.

obtained *mokṣa* along with about a hundred million monks, and at Chaitri Punema that Puṇḍarīka Ganadhara, the chief disciple of Ṛṣabhadeva, obtained *mokṣa* with fifty million monks. If it proves impossible to visit not merely Śatruñjaya but any of the other places, Jains still manage to acquire some special pilgrimage merit by taking a map or photograph of Śatruñjaya into the fields outside their town in the direction of that mountain and worshipping it there.

On the two other full-moon fasts, Phālguna Punema (in February or March) and Āṣādhi Punema (in June or July), Jains of either the Śvetāmbara or the Digambara sect fast, decorate their temples with lamps, and are specially diligent in attendance at the temple-worship, whilst Sthānakavāsi Jains go to their *upāsarā* to hear sermons. Āṣādhi is specially important to the ascetics, for in whatever town monks or nuns may be for that fast, there they must remain till the monsoon is over and Kārttika Punema comes round.

5. Jñānapañchami.—Śvetāmbara and Sthānakavāsi Jains observe the 5th day of the bright half of Kārttika, which they call *Jñānapañchami*, since special knowledge is gained by those who worship their sacred books on this day. The institution of this fast has been of incalculable use in preserving Jain literature, for not only are the books worshipped and sandal-wood sprinkled over them, but all the volumes in Jain treasure-houses[1] are supposed to be dusted, freed from insects, and rearranged on this day.

6. Maunagyārasa.—Once a year the very strict ascetics commemorate by a solemn fast the five stages through which a mortal must pass before he can become a *siddha*. Sthānakavāsi laymen do not generally keep this day, though some of the Śvetāmbara laity do. During the whole day absolute silence is observed, together with abstention from both food and water. The Jain, as he tells his beads, meditates on each of the five stages (*sādhu*, or ascetic; *upādhyāya*, or preceptor; *āchārya*, or ruler of monks; *tīrthaṅkara*, or ford-finder; *siddha*, or perfected one) which lie before him. This fast, as its name shows, must be kept on the eleventh day of a month. If possible, it should be observed on the eleventh day of the bright half of Mārgaśīrṣa (November and December); but, if that particular date is inconvenient, the eleventh of any other month may be substituted. On the day following, Śvetāmbaras celebrate the breaking of this eleventh-day fast in a curious way. They choose eleven kinds of things connected with the pursuit of knowledge, and put eleven of each kind, such as eleven pens, eleven books, eleven pieces of paper, eleven inkpots, etc., in front of them, and worship these 121 articles.

7. Oli or Āmbela.—Eight days before Chaitri Punema great fairs are held at the chief places of pilgrimage, which are attended by Jains from all over India. At this time men and women take special vows as to what they will eat, promising, for instance, to eat only one kind of grain throughout the day and to drink only boiled water. Oli or Āmbela is the fast *par excellence* of women, for at this season a royal princess, Mayanā Sundarī, by worshipping the saint-wheel, won health and restoration to his kingdom for her husband, Sripāla, who had been a leper. Ever since the days of this princess, women who want a happy married life have been specially diligent in observing this fast, giving up for the time any food they particularly like, such as melted butter or molasses, and eating only one sort of dish.

8. Days of abstinence.—In addition to special days like the above, many careful Jains observe as fasts, with more or less strictness, twelve days in every month. These days are the two second, the two fifth, the two eighth, the two eleventh, the two fourteenth, and the bright and dark fifteenth of each month. (In India a month consists of two sets of fifteen days, the bright fifteen and the dark fifteen of the moon.) Less devout Jains observe only five days of abstinence (the two eighth, the two fourteenth, and the fifteenth of the bright half of the month), whilst others keep only two—Śvetāmbaras observing the eighth (Āṭhama) and the fifteenth (Punema), and Digambaras the eighth and the fourteenth days of the month.

9. The bathing of Gomateśvara.—Three or four times during every century the Digambara Jains hold a great festival at Śrāvaṇa Belgolā (Hassan District, Mysore State) to lave the gigantic statue of Gomateśvara. This statue, which is one of the wonders of India, was cut some 900 years ago from a solid block of stone sixty feet high.

The last festival[1] was held in March 1910, when Jain devotees gave gratis the materials and the labour to erect the immense scaffold which encircled the image on its three sides. On the day of the bathing Indrabhūti was closed to all but Jains, but it was possible to see from a distance the figures on the platform over the head of the image. The actual laving took place in the afternoon, and the gradual darkening of the image, as the mingled stream of curds, milk, melted butter, etc., flowed over it, was noticeable even from afar. The privilege of laving the figure had been previously put up to auction, Jains bidding what price they would pay for every separate cupful of mixture they poured over it. During the festival the question was raised of erecting a glass shelter over the sixty-foot figure, but it was decided that to build this would be to appear wiser than their ancestors, and, furthermore, the laving of the image was considered to have proved a valuable means of protecting it from the elements. It was suggested that the festival should be held more frequently, and the image bathed every three or every seven years.

10. The consecration of an idol.—Perhaps amongst festivals should be included *Añjanaśalākā*, the consecration of a new idol, for it is celebrated with the greatest pomp and magnificence. *Mantras* are recited, and in the case of Śvetāmbara Jains the metal eyes are inserted in the head of the idol,[2] which is then anointed with saffron; until this takes place, the idol is not regarded as sacred. The ceremony is rare nowadays, owing to the enormous expense it entails on the donor of the idol, who has to pay for great processions and feasts in addition to the cost of the image.

11. Hindu festivals and fasts observed by Jains.[3]—In addition to their own fasts and festivals, Jain laymen observe most of the great festivals of the Hindus: for example, *Holi*, the shameless festival of spring (which, however, is not observed by Jain ascetics or by laymen who have taken the twelve vows); *Śitalāsātama*, the festival of the goddess of smallpox, when most of the Jain women and children (despite the efforts of their religious leaders and the conferences) go to her temple and offer drawings of eyes to the goddess and money to the temple Brāhmans to obtain immunity from smallpox for the year. On this day, as the women refuse to cook on the ordinary hearths (believing the goddess of smallpox to be sleeping there for the day), the household has usually to eat stale food, or to cook on some other hearth. Jains also observe *Virapasalī*, which falls on some Sunday in the month of Śrāvaṇa (August), when brothers give presents to their sisters, and sisters bless their brothers; and the corresponding feast of *Bhāi bija*, when sisters invite their brothers to their houses. *Daśerā*, the great Kṣatriya festival, is kept by Jains only to the extent of eating specially dainty food on that day. Another Hindu festival the Jains observe is *Makarasaṅkrānti*, which falls

[1] *i.e.* of books and MSS. The most famous of these treasure-houses are at Pātan, Cambay, and Jesalmir.

[3] Cf. FESTIVALS AND FASTS (Hindu).

in January. On this day they fulfil one of their Four Fundamental Duties[1]—that of charity—by giving away food and clothing to the poor and fodder to cattle.

Many Jain women, even of the non-idolatrous sect, observe the Hindu fast of *Bolachotha*, by abstaining from food till evening, when they worship the goddess Gaurī, wife of Śiva, and then cows and calves, which they mark with red on their foreheads. Jain girls very frequently keep the Hindu fast of *Molākata*, abstaining for a whole day from all food containing salt, in order to obtain a kind husband. Many of the Jains so far observe the *Śrāddha*, or death-ceremonies of the Hindus, as to eat specially good food on that day. (The ceremony of throwing food to the crows at this time has, however, in most cases been discontinued by the Jains.)

In fine, so many festivals do the Jains observe, and such rich food do they eat in celebration of them, that a proverb has sprung up—'To turn Śrāvaka for Śiro'—which accuses folk of turning Jain for the sake of a favourite festal dainty.

LITERATURE.—The information contained in the above article has been derived directly from Jain informants. The reader may consult also *BG* ix. (1901) pt. i. pp. 113–115, and the present writer's *Notes on Modern Jainism*, London, 1910.

MARGARET STEVENSON.

FESTIVALS AND FASTS (Jewish).—**1. Modifications of the ancient feasts.**—Although the post-Biblical period of Judaism witnessed the institution of several semi-festivals and other memorial days, it was marked by the rise of no new festivals invested with the solemnities of the ancient feasts. As an offset to this, however, the feasts prescribed in the OT underwent manifold changes, and the character of not a few was fundamentally modified. More particularly after the destruction of the Second Temple, and the consequent cessation of sacrificial worship, the Jews sought to find a substitute for the latter, partly in the development and institution of an ordered liturgy—the germs of which, it is true, go back to the time when the Temple was still standing—and partly in the establishment of new observances for family devotion, as, *e.g.*, the *Kiddûsh* (lit. 'hallowing'), *i.e.* the ceremony of hailing the dawning Sabbath or feast-day by speaking a benediction over a cup of wine, the *Sēder* (see below) designed for the evening of the Passover, and the like. Other modifications were brought about by the altered conditions of life; thus, *e.g.*, the pilgrim festivals almost entirely lost their agricultural character, and became purely historical celebrations.

One particular modification which affected all the Biblical festivals except the Day of Atonement was the introduction of a second feast-day for the Diaspora, *i.e.* for countries outside Palestine. Among the Jews in the time of the Second Temple, and for centuries afterwards, the beginning of the month was determined, not by calculation, but by observation of the new moon, as it was decreed by the supreme spiritual authorities that the month should begin with the first sight thereof (see art. CALENDAR [Jewish], vol. iii. p. 117 ff.). At first the authorities caused the event to be announced to the various communities by beacon-fires on the hills (cf. Wensinck, in Becker's *Islam*, i. [1910] 101), and afterwards by express messengers (Mishna, *Rōsh Hashshānā*, i. 3–4, ii. 2–4), telling them at the same time whether the foregoing month was 'defective,' *i.e.* one of 29 days, so that the new month began on the thirtieth, or 'full,' *i.e.* one of 30 days, the new month thus commencing on the thirty-first. But, as the Diaspora became more widely spread, it was found impossible for messengers to reach the communities in due time, and accordingly, in order to avoid all possibility of error, these outlying communities observed not only the computed feast-day, but also the day following, which, if the closing month had been a 'full' one of 30 days, would, of course, be the proper date. Thus, *e.g.*, the Diaspora kept the Feast of the Passover from the 15th to the 22nd (instead of to the 21st) of Nisan, and held a solemn celebration on the 15th and 16th and on the 21st and 22nd (instead of the 15th and the 21st only), etc. An exception was made in the case of the Day of Atonement alone, as being a fast, for it was considered dangerous to fast for two days in succession (Jerus. *Ḥalla*, i. fol. 57*c*, l. 14; Bab. *Rōsh Hashshānā*, 21*a*). The New Year festival, again, which fell on the 1st of Tishri—on the first day of a month—was often celebrated on two days, even in Palestine, on the ground that it was never possible to determine whether the previous month, Elul, would be 'defective' or 'full.' Once the fixed calendar was introduced, all uncertainty in the matter was at an end; nevertheless, a second New Year's day was observed in Palestine as elsewhere from the 12th cent. A.D. (cf. 'Responses of the Geonim,' ed. Lyck, 1864, no. 1; Zeraḥia Gerundi's *Ma'ōr* on tr. *Beṣa*, at the beginning). In the Diaspora likewise, the observation of the second day was rendered unnecessary by the introduction of the fixed calendar, but it was allowed to continue for tradition's sake (cf. Bab. *Beṣa*, 4*b*). The first to reject it were the Karaites, who reinstated the observation of the moon, and many modern Jewish communities follow their example.

The several festivals were modified as follows:

(1) *Pesaḥ* (The Passover).—Of the three characteristic symbols of this feast—the sacrificial lamb, the unleavened bread, and the bitter herbs—the first was discarded, while the others survived in family devotion under the name *Sēder*. In Palestine the *Sēder* is observed on the first, and in the Diaspora on the first and the second, evening of the festival, and the ritual for its observance is contained in a book called *Haggādā* ('story,' 'narrative'). A faint vestige of the originally agricultural character of this festival appears in the prayer for dew (*ṭal*), which is recited on the first day (see below).

(2) *Shebû'ôth* (The Feast of Weeks).—According to Scripture, this feast was to be celebrated seven full weeks after the Passover. The seven weeks were reckoned from the ממחרת השבת, *mimoḥorath hash-shabbath* (Lv 23[15]), and the interpretation of these words was a subject of controversy between the Pharisees and the Boethusæans. The Pharisees, as also the LXX, Philo, and Josephus, understood them as meaning 'on the next day after the feast,' and counted from the 16th of Nisan; so that the Feast of Weeks fell (when Nisan and Īyyar were both 'full') on the 5th of Sivan, or (when Nisan was 'full' and Īyyar 'defective,' or conversely) on the 6th, or again (if both were 'defective') on the 7th (Jer. *Rōsh Hashshānā*, i. fol. 57*b*, l. 18 from foot). Hence, after the introduction of the fixed calendar, according to which Nisan was always full and Īyyar always defective, the festival fell on the 6th, or (in the Diaspora) on the 6th and 7th, of Sivan. The Boethusæans, on the other hand, interpreting the Biblical phrase as 'on the next day after the Sabbath,' began the commemoration with the first Sunday of the Passover festival, and celebrated the Feast of Weeks always on a Sunday. The Boethusæans were followed in this by all the schismatic communities, down to the Samaritans and Karaites of the present day (cf. Poznański, in *Kaufmann-Gedenkbuch*, Breslau, 1900, p. 173, note 4). But there were others who took the words to mean 'on the next day after the last

[1] These are: charity, virtue, austerity, devotion.

feast-day' (so, *e.g.*, the Syriac Peshiṭta), and therefore counted from the 22nd of Nisan, celebrating the Feast of Weeks on the 12th of Sivan (as, *e.g.*, the Abyssinian Falashas), or—where the reckoning was by months of four weeks or twenty-eight days —on the 15th (so, *e.g.*, the apocryphal *Book of Jubilees*; cf. Epstein, *Eldad ha-Dani*, Vienna, 1891, p. 154 ff.). The Feast of Weeks likewise lost its agricultural character, and became the festival of the Sinaitic legislation, which was delivered in the third month, *i.e.* Sivan (Ex 19; cf. Bab. *Shabbath*, 86*b*). The festival bears this character also among the Samaritans (cf. Cowley, *The Samaritan Liturgy*, Oxford, 1909, i. 335 ff.) and the Karaites.

(3) *Rōsh Hashshānā* (New Year Festival).—In the Pentateuch (Nu 29^{1}; cf. Lv 23^{24}) this feast, which falls on the 1st of Tishri, is referred to as *Yōm Tᵉrū'a* ('day of blowing the trumpet'), but not as the beginning of the year (the year began with Nisan [Ex 12^{2}]), though the Feast of Tabernacles, which was likewise celebrated in Tishri, is spoken of as taking place 'at the turn of the year' (Ex 24^{22}). Ezekiel (40^{1}) speaks of the 10th of the month—probably Tishri is meant (cf. Lv 25^{9})—as the beginning of the year. Ezra read the Book of the Law before the assembled people on the 1st of Tishri, and calls the day 'holy to the Lord' (Neh 8^{1-10}), but not New Year's day. The latter designation was first given to the festival in the Talmud (*Rōsh Hashshānā*, i. 1), where it ranks also as a day of Divine judgment. We may perhaps discern here traces of Bab. influence (cf. Zimmern-Winckler, *KAT*³, p. 515). The days from the 1st to the 10th of Tishri came simply to be days of penitence and heart-searching (*'Asereth Yemē Tᵉshūba*; cf. *Rōsh Hashshānā*, 18*a*).

(4) *Yōm Kippūr* (The Day of Atonement).—Here, too, a substitute for the abandoned sacrifice was found in a solemn festival in the synagogues, and this day is regarded as the most important of the Jewish feasts.

(5) *Sukkōth* (The Feast of Tabernacles).—This festival likewise entirely lost its originally agricultural character as a vintage feast. According to a Talmudic ordinance (*Ta'anith*, i. 1), God is to be praised as the sender of rain, in a prayer beginning on the 8th day of the Feast of Tabernacles and ending with the 1st day of the Passover. In keeping therewith, a special prayer for rain (*geshem*) was offered on the former day—as also one for dew (*ṭal*; see above) on the latter—and various hymns were composed for the *geshem* from the 7th or 8th centuries. The 9th and last day of the Feast of Tabernacles—in the Diaspora only, of course—was called *Simḥat Torah*, 'delight in the Law,' because, according to a very ancient custom, the reading of the Pentateuch in public worship was completed, and a fresh beginning made, on that day; this designation, however, is first met with in the 11th or 12th cent. (cf. Zunz, *Ritus*, Berlin, 1859, p. 86). The 21st of Tishri, the last of the semi-festival days, is styled *Hosha'na Rabbā*, 'the great Hosanna,' or *Yōm 'Arāba*, 'the day of willows' (*Sukka*, 45*a*). At this festival it was customary to set up willows about the altar, and march round it once; but on the 21st of Tishri the altar was compassed about seven times, and in commemoration thereof it is still the practice to hold a sheaf of willows during the prayer on that day. In the Middle Ages, mysticism gained a powerful hold upon the day, and converted it into a statutory judging day supplementary to the preceding New Year's day and the Day of Atonement (cf. Berliner, *Randbemerkungen zum hebr. Gebetbuche*, ii. [1912] 25 ff.).

2. Minor festivals of later origin.—Of semi-festivals, besides the Biblical Feast of Purim and the Feast of the Maccabees (*Ḥanukka*)—not found in the Bible—both of which have been referred to in the 'Hebrew' section, the following, together with other memorial days, some of which have been given up and some fallen into decay, may be noted:

(1) If, owing to Levitical uncleanness, or from any other cause, a man was unable to present his Paschal offering on the 14th of Nisan, he could, provided he observed certain regulations, make good his omission on the 14th of Īyyar (cf. Nu 9^{10-12}). Traces of this practice still survive, and the day is known as *Pesaḥ Shēnī* ('Second Passover').

(2) The 15th of Ab was the day on which wood was supplied for the altar of burnt-offering, and was, as such, a day of rejoicing (references in Schürer, *GJV* ii.⁴ 316). The recollection of this fact was subsequently lost, and the Talmud (Jer. *Ta'anith*, 69*c*; Bab. 30*b*) seeks in various ways to explain the significance attached to the day.

(3) Nicanor's Day was the 13th of Adar, and commemorated the victory of Judas Maccabæus over the Syrian general Nicanor at Adasa in 161 B.C. (1 Mac 7^{39-50}, 2 Mac 15^{1-36}; Jos. *Ant.* XII. x. 5). P. Haupt ('Purim,' *Beitr. zur Assyr.* vi. 2, p. 3 ff.) seeks to derive the Feast of Purim from Nicanor's Day, but, as it would seem, without any good reason. Nowadays, as we shall see presently, the 13th of Adar is observed as a fast.

(4) and (5) The Alexandrian Jews celebrated several other festivals of a special character. One of these was designed to commemorate the translation of the Torah into Greek (Philo, *Vita Mosis*, ii. 7); another was a memorial of their marvellous deliverance at the time when Ptolemy IV. (1 Mac 6^{36}) or Ptolemy VII. (Josephus, *c. Apion.* ii. 2) attempted to destroy them by means of elephants. The dates of these festivals, however, are quite unknown.

(6) A little work bearing the title *Megillath Ta'anith* ('Roll of Fasts'), and redacted in Aramaic in the 1st or 2nd cent. A.D., contains a list of days on which, as commemorative of some joyful event, it was not permissible to fast (Lit. in Schürer, i. 157, and *JE*, *s.v.*). Of such days there are no fewer than sixty-two, including, besides the *Ḥanukka*, those mentioned in 1–3 above.

(7) The 15th of Shebaṭ is spoken of in the Mishna (*Rōsh Hashshānā*, i. 1) as the New Year for trees; that is to say, the Biblical ordinances relating to trees and their fruits (as, *e.g.*, in Lv 19^{23-25}) come into operation for the year on that day. This date still retains its associations, and is regarded as a day of rejoicing.

(8) The forty-nine days between the Passover and the Feast of Weeks are called the 'Ōmer days, because the beginning of their enumeration was signalized by presenting a sheaf (*'ōmer*) of barley as an offering. These days were also accounted a time of mourning, as it was said that 12,000 pupils of Aḳiba had perished during the period (*Yebāmoth*, 62*b*); and perhaps we have here a reminiscence of Bar Cochba's revolt under Hadrian, in which Aḳiba took a very active part. Further, it is regarded as improper to marry during this season; but the earliest mention of this restriction is found in post-Talmudic sources (cf. the list of relevant passages in Geiger's *Jüd. Ztschr.* vii. [1869] 83), and many scholars find in it simply an echo of the Roman practice of having no marriages in May, as the spirits of the dead were propitiated by special ceremonies, and the so-called *Lemuria* celebrated, in that month. An exception was made of the thirty-third 'Omer day (*Lag be-'ōmer*; lag = ל״ג = 33), which coincides with the 18th of Īyyar, and is regarded as a semi-festival. The reason for excluding this particular day is far from clear. A felicitous conjecture has been made by Derenbourg

(*REJ* xxix. [1894] 149), viz. that the actual period of mourning lasted only thirty-four days (the twenty-nine of Īyyar and the first five of Sivan), and that these were divided into two equal portions with a festive day inserted between them. The 18th of Īyyar would thus be a kind of *Mi-Carême*.

3. **Fasts.**—Of fasts falling on stated dates, the Pentateuch prescribes only one, viz. the Day of Atonement on the 10th of Tishri (Lv $16^{29.\ 31}$ $23^{27.\ 29}$). Then we read in Zec 8^{19} that the fasts of the 4th month (Tammuz), the 5th (Ab), the 7th (Tishri), and the 10th (Ṭebeth), which, as appears from Zec 7^{5}, were observed during the Exile in Babylon, were henceforth to be days of rejoicing. According to the explanation given in the Talmud (*Rōsh Hashshānā*, 18*b*), and accepted by the majority of modern commentators (as, *e.g.*, among the most recent, Marti and Hoonacker, *ad loc.*), these were four fast-days which had been appointed as memorials of calamitous occurrences connected with the overthrow of the Jewish State and the destruction of the Second Temple by the Babylonians, thus: (1) the fast of the 4th month, to commemorate the taking of Jerusalem on the 9th of Tammuz (Jer 39^{2} 52^{6}); (2) that of the 5th month, in memory of the destruction of the Temple, which took place, according to one account (2 K 25^{8}), on the 7th of Ab, and, according to another (Jer 52^{12}), on the 10th; (3) that of the 7th month, in memory of the slaying of Gedaliah—here, however, the sources (2 K 25^{25}, Jer 41^{1}) mention the month only, not the day; and (4) that of the 10th month, to commemorate the investment of Jerusalem, which began on the 10th of Ṭebeth (2 K 25^{1}, Jer 52^{4}, Ezk 24^{1}).

As might be expected, these fasts were discontinued in the time of the Second Temple, but they were resumed after its destruction, though with several changes of date. The fast of the 4th month was transferred to the 17th of Tammuz, the day on which, in A.D. 70, the daily morning and evening sacrifice had to be abandoned (Jos. *BJ* VI. ii. 1), and to which various other national disasters were assigned (Mishna, *Ta'anith*, iv. 6). The fast of the 5th month was appointed for the 9th of Ab, and began, in fact, on the evening before, *i.e.* the 8th of Ab. This was the day (8th Loos) on which the gates of the Temple were set fire to by command of Titus, though the Temple itself was not burned down till the 10th of the month (see Schürer, i. 631, where the statement of Joḥanan in *Ta'anith*, 29*a*, might have been added to the references); perhaps the 9th was decided upon because Betar, the residence of Bar Cochba, was also taken by storm on that day. The fast of the 7th month was assigned to the 3rd of Tishri, as the first two days of the month were dedicated to the New Year festival, and could not be spent as fasts. Finally, the fast of the 10th month still continued to be observed on the 10th of Ṭebeth.

The Karaites keep strictly to the Biblical dates, fasting on the 9th of Tammuz, the 7th and 10th of Ab, and the 10th of Ṭebeth. On the authority of Neh 9^{1}, they hold the fast of the 7th month on the 24th of Tishri, and they too connect it with the assassination of Gedaliah, though with other events as well. It should be borne in mind, further, that, in the Roll of Fasts above referred to, the 3rd of Tishri is reckoned among festive days, so that this fast must have been instituted at a later date than the others.

To these four fasts was subsequently added a fifth, observed on the 13th of Adar in commemoration of the three days' fast of Queen Esther (Est 4^{16}), and therefore known also as Esther's Fast (*Ta'anith Esther*). The earliest reference to it is found in two post-Talmudic works, viz. the *Sheeltoth*, dating from the 8th cent. A.D., and the *Midrash Tanḥuma* (*Bereshith*, no. 3), probably of still later origin; and in France, even as far down as the 11th cent., the fast was regarded not as an ordinance, but simply as a custom (cf. Isr. Lévi, *REJ* xlvii. [1903] 170). It should also be noted in this connexion that, while the Second Temple was still in existence, the 13th of Adar was a day of rejoicing, and was called Nicanor's Day (see above). The fast itself may possibly go back to an earlier time, when the people actually fasted for three days, precisely as Esther had done. In the extra-canonical Talmudic tractate *Soferim* (xvii. 4, xxi. 1) it is stated that the three fast-days of Purim were not consecutive, but were held on Monday, Thursday, and Monday. In Palestine, however, they were observed *after* Purim, because the 13th of Adar, as Nicanor's Day, and the 12th, as Trajan's Day, were festive days, and could not be spent as fasts; even at that period, accordingly, the observance of Nicanor's Day must have been in force (cf. Neuwirth, *Jüd. Presse*, 1912, no. 11). The Karaites do not recognize this fast, though their founder, 'Anān b. David, enjoined that the crisis connected with Purim should be commemorated by a fast of seventy days, lasting, conformably to Est 3^{12} 8^{1}, from the 13th of Nisan to the 23rd of Sivan (cf. Harkavy, *Stud. u. Mitt.* viii. [1903] 40, 130, 133, 149). But this injunction was, in all likelihood, never put into practice.

Besides the fast-days already specified and associated with stated dates, it was customary to appoint fasts in connexion with various evils of a more general kind, as, *e.g.*, with the preparations for a battle (1 Mac 3^{47}, 2 Mac 13^{12}), drought (Mishna, *Ta'anith*, i. 5), and the like; nor has this practice even yet been wholly abandoned. Moreover, devoutly-minded people fast as a seal of penitence, or from a craving for self-denial. Such fasts usually take place on Mondays or Thursdays, which have from ancient times been accounted specially suitable for fasting, probably because it was on these days that the people of the surrounding districts came into the cities for the purpose of hearing the lesson from the Torah, or of attending the law-courts (cf. Joel Müller, *Masechet Soferim*, Leipzig, 1878, p. 235 ff.). But we find that fasting was practised on other days as well, though never on Sabbaths, or on feast-days, or their preparatory days (cf. Jth 8^{6}).

There are also local fast-days, designed to commemorate particular local calamities, and thus obligatory only upon the Jews resident in the countries concerned (cf. Zunz, *Ritus*, 127 ff.). Of such fasts the best known is the 20th of Sivan, observed as a memorial of the slaughter of Polish Jews by Cossacks in 1648–49.

LITERATURE.—This has been sufficiently indicated in the course of the article.

SAMUEL POZNAŃSKI.

FESTIVALS AND FASTS (Muslim).—Properly speaking, Muslims know only two festivals (*'īd*, more rarely *mausim*), which, however, are not mentioned in the Qur'ān, though they are based on it. Further, they have introduced, in the course of time, a multitude of commemoration days for holy men and sacred events; and, finally, in countries which were arabicized later, they have appropriated the pre-Islāmic holidays to a certain extent. Thus we can distinguish festivals and holidays, properly speaking, from observances purely Islāmic and half Islāmic, universal and local.

1. The greatest festival is the festival of sacrifices connected with the Great Pilgrimage (*yaum al-aḍḥā; yaum an-naḥr; al-'īd al-kabīr* or *al-akbar*; Turk. *qurbān bairāmi*), which is celebrated from the 10th to the 13th of Dhū-l-ḥijja by pilgrims in the Valley of Minā (now Munā), east of Mecca, and by non-pilgrims at home. Although the festival

rests on a heathen basis (cf. art. CALENDAR (Muslim), vol. iii. p. 126[b]), the Islāmic legends associate it with and explain it by the sacrifice of Ishmael at the hand of Abraham. In the *Sūra al-Ḥajj* (xxii.) of the Qur'ān there is, besides the explicit recognition of the Ka'ba cult, also a mention of the sacrifice of animals (v.[28]):

'And proclaim amongst men the Pilgrimage; let them come to you . . . (29) for the stated days over what God has provided them with of brute beasts, then eat thereof and feed the badly off, the poor . . . (31) Cattle are lawful for you, except what is recited to you; . . . (33) That—and he who makes grand the symbols (*sha'ā'ir*) of God, they come from piety of heart. (34) Therein have ye advantages for an appointed time, then the place for sacrificing them is at the old House [the Ka'ba]; . . . (37) The bulky (camels) we have made for you one of the symbols of God, therein have ye good; so mention the name of God over them as they stand in a row, and when they fall down (dead) eat of them, and feed the easily contented and him who begs. Thus have we subjected them to you; haply, ye may give thanks! (38) Their meat will never reach to God, nor yet their blood, but the piety from you will reach to Him.'

Further, it is customary to interpret the words 'So pray to thy Lord and slaughter (victims)' (Qur. cviii. 2) of the festival of sacrifices. According to the eldest tradition (*ḥadīth*, quoted according to the *Ṣaḥīḥ* of al-Bukhārī, Būlāq, 1296 [vocalized], in 8 parts), the following is the fixed order, partly in common with the other festival (see below), which this festival has. First (Bukhārī, ii. 3. 8, 3. 18, 4. 2, 5. 16, 6. 10, 7. 20, 8. 4; vi. 223. 2, 226. 6, 7) comes the general prayer (*ṣalāt*) accompanied by an edifying address (*ḥuṭba*) by the leader in prayer (*imām*). Only thereafter can the sacrificing of the animals take place. Some wished to make the address precede the prayer, because after it the crowd could not be held in restraint. But this practice is criticized. It is lawful to eat dates before the prayer, but not to slaughter or taste flesh (ii. 3. 15 f., 5. 18, 6. 11, 10. 5, 9). If any one did so, it was not reckoned to him as a sacrifice; he had to repeat the slaughtering after the address. When the *imām* addressed women, they used, in the times of the Prophet, to cast their ornaments as alms (*ṣadaqa*) into the garment of the *mu'adhdhin*, Bilāl, held out to them. During the prayer (ii. 5. 4, 7. 20, 8. 12) an antique weapon (*'anaza*, short spear, or *ḥarba*, dart, javelin) used to be planted in the earth before the *imām* (ii. 7. 10 ff.). (This explains also the name *Ḥarba* for Friday.) It was forbidden to carry arms on festival days (ii. 5 f.). It is told that the Prophet consummated the sacrifice in the following fashion (vi. 224 f.). He took two rams (*kabsh*, cf. Gn 22[13]), placed them in the direction of the Ka'ba, pronounced some pious formulæ (see below), and slaughtered the animals. The following predicates are applied to the victims:—(i.) *amlaḥ*, 'of mixed colours,' black and white (Tweedie, *Arabian Horse*, 1894, p. 263, translates this rare expression 'silver grey'); (ii.) *aqran*, 'with grown horns'; (iii.) in some texts but not all, *maujū'*, *maujī*, *mūja'*, *i.e.* 'with testicles crushed' between two stones or beards, because a sacrificial animal must have no sensuality. The last regulation seems to be pagan; for we may infer from Lv 22[24] (כָּתוּת) and Dt 23[2] (פְּצוּעַ־דַּכָּה) that this practice was also present in the Canaanite cult, and was suppressed only by the Jahweh-religion. The heathen custom, also, of adorning the victim with a necktie (*qilāda*) is mentioned even in Islām (vi. 227. 7 f.). The victim is called *ḍaḥīya*, *uḍḥīya*, *dhabīḥa* (cf. זבח), *nasīka*, and *nusk* (cf. נסך); in the Maghrib *'ayāda*. The flesh was eaten by the owner of the sacrifice, and also often distributed among the poor (vi. 223. 8; Baiḍāwi, i. 632. 6 ff.). The second and the third days, on which the inferior parts were consumed, were called on this account *yaum ar-ru'ūs*, 'day of the heads'; *yaum al-qarr*, 'day of the remnants'; *yaum al-akāri'*, 'day of the legs.' Besides sheep, oxen and camels were allowed as victims. At the slaughtering the following words are pronounced:—(*a*) *Bismillāh!* 'in the name of God!' (cf. Qur. xxii. 37); (*b*) *Allāhu akbar*, 'God is very great' (cf. Qur. xxii. 41); (*c*) *Allāhumma! hādhā minka wa-ilaika* (*laka*)! 'O God! this from Thee and unto Thee,' which probably means, 'From Thee, the angry God, we take refuge in Thee, the gracious God!' (cf. I. Goldziher, 'Ueber eine rituelle Formel der Muhammedaner,' *ZDMG* xlviii. [1894] 95 ff.). The ethical side of sacrifice is emphasized in Qur. xxii. 38 as well as in tradition (ii. 7. 9). It is a means of securing moral purification and blessing, and of coming near to God (acc. to the interpretation of *qurbān*, 'sacrifice'). The puritanic Abū Bakr wished therefore to hold in restraint as far as possible the joyful disposition that such a festival naturally brought with it, and to exclude female singers. But the more tolerant Prophet allowed them (ii. 2 f.). Also in the matter of luxury in clothing, there existed side by side a stricter and a laxer practice. Whoever had neglected the celebration of the sacrifice, or could not be present, had to substitute for it a prayer consisting of two bows (*rak'a*) (ii. 10. 15 ff.). In course of time both festivals have become familiar celebrations, during which the faithful make calls and give presents, put on new clothes, and seek amusements; yet they also visit graves, and hold devotional exercises.

2. The month of fasting and the festival that follows it are closely connected. (*a*) *The fast* (*ṣaum*, *ṣiyām*) (opp. *ifṭār*).—According to the Arabic tradition, Muhammad commanded first that the faithful should fast on the Day of *'Ashūrā*, the 10th of Muḥarram, after the fashion of the Jews, who fast on the 10th of Tishri, the Day of Atonement (ii. 208. 8, 223. 8, 231. 6, 14; iv. 250 f.). Later this regulation was abrogated, and, instead, the whole month of Ramaḍān was devoted to fasting (cf. CALENDAR [Muslim]). The regulation for this is in Qur. ii. 179 ff.:

'O ye who believe! There is prescribed for you the fast as it was prescribed for those before you; haply ye may fear. (180) A certain number of days, but he amongst you who is ill or on a journey, then (let him fast) another number of days. And those who are fit to fast (but do not) may redeem it by feeding a poor man; but he who follows an impulse to a good work it is better for him; and if ye fast it is better for you, if ye did but know. (181) The month of Ramaḍān wherein was revealed the Qur'ān, for a guidance to men, and for manifestations of guidance, and for a discrimination. And he amongst you who beholds this month then let him fast it; but he who is sick or on a journey, then another number of days; God desires for you what is easy, and desires not for you what is difficult—that ye may complete the number, and say "Great is God," for that He has guided you; haply ye may give thanks . . . (183) Lawful for you on the night of the fast is commerce with your wives; they are a garment unto you, and ye a garment unto them [or, better: for touching, to be touched]. God knows that ye did defraud yourselves, wherefore He has turned towards you and forgiven you; so now go in unto them and crave what God has prescribed for you, and eat and drink until a white thread can be distinguished by you from a black one at the dawn. Then fulfil the fast until the night, and go not in unto them, and ye at your devotions in the mosques the while. These are the bounds that God has set, so draw not near thereto. Thus does God make manifest His signs to men, that haply they may fear.'

The words 'may redeem it by feeding a poor man' were soon abrogated (*mansūḥ*), because they were misused by the wealthy (Qur. ii. 180[b]; Bukhārī, ii. 219). The custom of determining the daybreak by the test of distinguishing a white thread from a black is of Jewish origin. The ethical nature of the fast was strongly emphasized in the earliest tradition (ii. 208. 18, 210. 19, 211. 4 f.), just as it was in the Qur'ān. It is called, on the one hand, 'an atonement' (*kaffāra*), on the other 'a protection against sensuality.' It is of no benefit whatever as a mere *opus operatum*, but it must take place (1) in faith (*īmānan*), (2) intentionally (*nīyatan*), (3) in expectation of a reward and compensation (*iḥtisāban*) from God (ii. 210. 4, 232. 7, 233, 17). Whoever does not give up untruth and deceit will not profit by fasting (ii. 210. 15). Boisterous merrymaking is not allowed (ii. 210. 19). The faithful

are exhorted not to insult each other during the fast. Whoever is insulted or attacked while fasting must not resist, but briefly answer, 'I am fasting' (ii. 208. 15, 210. 20, 220. 2). Tradition says of one who keeps the fast in this manner: 'The perfume of the mouth of the faster is more pleasant before God than the odour of musk' (ii. 208. 16, 210. 20). The month may not be shortened, but there must not be any overdoing either (ii. 223 f.). The Qur'ān itself excludes all rigorous practice (ii. 181). Similarly, tradition says that the fasting must be regulated according to the power and ability of each individual (Baiḍāwī, i. 102. 6). Some overzealous people wished to continue (*wiṣāl*, *muwāṣala*, *sard*) the fast after sunset through the whole night until the next morning; this met with disapproval, and was even threatened with punishment (ii. 223 f.). To meet different conditions and circumstances of everyday life there are special regulations which partly border on casuistry. The Qur'ān itself makes an exception in favour of the sick and of travellers (ii. 180). Likewise a Bedawī proverb says, *Al-musāfir kāfir*, 'The traveller is (like) an infidel,' *i.e.* he is not bound by ritual precepts. Sexual intercourse or the kissing of a woman is allowed (although restricted by the ethical conception of the fast, ii. 215), just as the swallowing of one's saliva (ii. 215. 20) and the use of a toothpick (*siwāk*). Further, it is allowed to snuff up medicine (*sa'ūṭ*) and to dye the eyes with eye-paint (*kuḥl*) (ii. 216. 7). In view of the question whether vomiting or bleeding breaks the fast, the following principle has been established (ii. 218): the fast concerns that which goes into the body and not that which comes out (contrast the position in Mk 7[18ff.]). Others condemn even the drawing of blood. The pious do not permit smoking, which is a more recent custom. One who is dying in Ramaḍān must appoint a substitute (*walī*) to fast the rest of the month in his place (ii. 221. 11). In time of menstruation, a woman may neither fast nor pray (ii. 221. 4).

Some people fast voluntarily at certain times outside of the month of Ramaḍān, *e.g.* on the Day of 'Ashūrā (ii. 231) (see above); in Sha'bān (ii. 225); on the 13th–15th of each month; during the days of pilgrimage at Mount 'Arafa and in the valley of Minā (Munā) (ii. 229); or three days in each month (i. 101. 18 f.). If a person alternately fasts one day and not the next, that is called 'the fast of the Prophet David' (ii. 226 f.).

More than once fasting is given in the Qur'ān as a penalty, *e.g.* iv. 94, where two months' fast is commanded for a case of murder; lviii. 5, two months' fast for one who wishes to have intercourse with his wife after having once pronounced the formula of divorce; v. 91, three days' fast for breach of faith; all this when the culprit is not able to pay the prescribed material penalty.

The oldest Islāmic legend explains the choice of Ramaḍān, which had no special significance in pre-Islāmic Arabia, as far as we know, by the tradition that it was the month of revelations. The 'leaves of Abraham' (Qur. lxxxvii. 19, cf. liii. 37), the Tōrāh, the Gospel, and the Qur'ān (ii. 181) are said to have been successively 'sent down' in Ramaḍān (Baiḍāwī, i. 102. 19 f.). Owing to the fast and the *Lailat al-qadr* (see below), the month of Ramaḍān is surrounded by a greater halo than any other Islāmic month. The mere sighting of the new moon (*hilāl*, cf. CALENDAR [Muslim]) which inaugurates Ramaḍān causes a joyful excitement in all circles. All that one forgoes in the daytime by fasting is compensated by material and spiritual gratification in the night. Beggars, Qur'ān-readers, *dhikr*-reciters, story-tellers fill the atmosphere with life. And, when Ramaḍān falls in the hot summer of the East, the season becomes one of the highest enjoyment through the pleasant nights. The activity of the State officials is reduced to a minimum by the government. Pious asceticism and mysticism celebrate here real triumphs. In addition to all this, there is the expectation of the 'little festival' which follows the hard month of fasting.

(*b*) When Ramaḍān ends, the first three days of the following Shauwāl are celebrated as *festival days*. It is the 'festival of fast-breaking' (*'īd al-fiṭr*) or 'the little festival' (*al-'īd aṣ ṣaghīr*; in Turkish, *Ramazān Bairāmi*, or *Kiychyk Bairām*). With the exception of the sacrifice, the oldest order of the festival is the same as in the *'īd al-kabīr* (see above), viz. prayer, edifying address, and feasting. The private and public amusements are also of the same nature as those of the great festival. Graves are frequently visited. In Egypt it is customary to lay on the tombs palm-boughs, or basils (*rīḥān*), or myrtle-leaves (*marsīn*), or rosemary (*ḥaṣalbān*).

3. Among the other holidays of the Muslims we must mention (1) 'the Night of Power' (*Lailat al-qadr*; Turk. *Qadr gijesi*), because it is based on the Qur'ān.

In Sūra xcvii. we read: '(1) Verily, we sent it down on the Night of Power! (2) And what shall make thee know what the Night of Power is? (3) The Night of Power is better than a thousand months! (4) The angels and the Spirit descend therein, by the permission of their Lord with every bidding. (5) Peace it is until the rising of the dawn!'

In xliv. 2 mention is made of 'the blessed night' of the revelation. But even the oldest tradition cannot tell which night it is (ii. 233 ff.). The only sure fact is that it falls in Ramaḍān. The following words are put in the mouth of the Prophet (ii. 238. 4): 'Behold, it was granted me to know the Night, then I forgot it again. Seek ye (believers), therefore, in the last ten nights of Ramaḍān and especially among the odd numbers!' In this matter, however, the believers have not got beyond the seeking; some have accepted the 25th night (Baiḍāwī, i. 102. 20); the Egyptians and the Ottomans officially observe the 27th night, *i.e.* the night from the 26th to the 27th of Ramaḍān. Legend and superstition add a good deal to that which the Qur'ān says in regard to the blessing of this night. It is celebrated by illuminating the mosques (at Cairo especially the Mosque of the Citadel), by prayers, devotional exercises, *dhikrs*, and hopes of mystical experiences.

(2) The first ten days of Muḥarram, the old 'Ashūrā days (see above), are held to be sacred, and are observed by the pious with superstitious usages. The last day in this series is especially consecrated by the pre-eminently Shī'ite commemoration of the death, at Kerbela in A.H. 61, of Ḥusain, the son of the Khalīfa 'Alī. Just as in mediæval Christendom and in antiquity, so also here, the religious imagination, seizing upon this event, worked it into a rich dramatic literature in Persia. For the Sunnites also the 10th of Muḥarram has its significance, for on that day Noah left the ark, and Adam and Eve came together for the first time after their expulsion from Paradise. With the exception of these first ten days of the Islāmic year, the beginning of the new year (*ra's as-sana*) is not observed in the same manner as among us and among the majority of the peoples in antiquity.

(3) The remaining holidays are in part productions of legends, and in part connected with the Great Pilgrimage, while a few stand in close relation with the wide-spread worship of saints. The month of Ṣafar is held to be unlucky (cf. CALENDAR [Muslim]). On the 28th of Ṣafar the anniversary of the death of Ḥasan, brother of Ḥusain, is observed in India. Two memorial days of the Prophet fall in Rabī' I.—his birth on the 12th, and his death on the 13th. In India, however, they re-

verse the order, and commemorate his death on the 12th. The anniversary of the birth (*maulid*, *mūlid*) of the Ḥasanain, *i.e.* of Ḥasan and Ḥusain together, falls in Rabīʿ II. Many other great and small saints also have their *maulids*. In Jumāda I. come the commemoration days of ʿAlī, his birth on the 8th, and his death on the 15th. On the 20th of Jumāda I. the Ottomans celebrate the capture of Constantinople in A.H. 857 (27th May A.D. 1453). Rajab has been regarded as a specially holy month ever since heathen times. On the 12th of this month is the *Lailat ar-raghā'ib*, 'the night of the fulfilled desires,' because the Prophet is said to have been conceived in that night. The night of the 26th of Rajab is the *Lailat al-miʿrāj*, 'the night of the ascension' of the Prophet. This observance is based on the narrative, found in Qur. xvii. 1, of the 'journey by night' (*isrā*, *masrā*) which the Prophet made on a marvellous animal (*Burāq*) from Mecca to Jerusalem and back. This event has been treated both in prose and in poetry in the literatures of all Muslim peoples. The 3rd of Shaʿbān is considered by some as the birthday of Ḥusain. The night of the 15th of Shaʿbān is very important as the 'night of privilege' (*Lailat al-barā'a*); in it the heavenly tree, *Sidrat al-muntahā* (Qur. liii. 14), is shaken to decide who shall die in the following year. Something similar to this is told also of the *Lailat al-qadr* (see above), so that one can apply to both nights what Meissner says about the latter, that it must be regarded as a reminiscence of the Babylonian festival of the New Year (*Zagmuk*) (*ARW* v. [1902] 227; *KAT*³, p. 515). On the 21st of Ramaḍān the Muslims of India commemorate the death of ʿAlī. In the month of Shauwāl, soon after the 'little festival,' the Egyptians begin the preparations for the sending of the *kiswa* to Mecca. But the pilgrims, who used to start on foot or riding about this time, have now come to use extensively European steamers from the Maghrib, Egypt, Syria, and the Ottoman countries. Consequently the celebration of the departure and of the return of the pilgrim caravans is now more and more confined to the sending of the *kiswa* and *maḥmil*. The *ʿīd al-ghadīr*, the festival of the Lake of Ḥumm, where the Prophet is said to have nominated ʿAlī as his successor, is purely Shīʿite, and kept on the 18th Dhū-l-ḥijja.

4. Just as in the worship of Saints, so also in the observance of certain festivals, a syncretism crops out which is otherwise quite unknown in Islām. It is true that the Arabs, though numerically far inferior in the great countries which they had conquered, thanks to some other factors spread their language there more or less successfully. But, on the other hand, they naturally adopted some customs, among which was the observance of certain days, closely bound up with the nature or the history of the subjected peoples. Thus in Egypt the following days are celebrated as general festivals: the second day of the Coptic Easter (*Shamm an-nasīm*, 'smelling the mild west wind'); the *Lailat an-nuqṭa*, 'night of the dropping,' *i.e.* the wonderful drop which causes the rise of the Nile, which night falls in June (*Bā'ūna*); with this is connected the custom according to which the *Munādī an-Nīl*, 'Proclaimer of the Nile,' announces the rise and height of its waters; also the celebration of the *Jabr al-Ḥalīj*, 'cutting of the canal,' when the water used to break into the old—now filled up—canal of Cairo. In Persia the old Persian New Year's Day (*Naurūz*), which falls on the vernal equinox, is one of the greatest festivals, and deeply affects all the social relations of the country. In the Spain of the Arabs, the Muslims observed St. John's Day with the Christians, under the name of *al-ʿAnṣara*, which elsewhere designates the Day of Pentecost. This Day of ʿAnṣara is still observed in Morocco about the beginning of July; others combine it with the Day of ʿAshūrā. The negroes of the Maghrib celebrate in May the *ʿīd al-fūl*, 'festival of beans.' Old style New Year's Day is still observed for three days in the Maghrib (formerly also in Egypt) as *Yennāir* or *Ennāyer*. Similarly in Turkey, Christian festivals, and, in India, Brāhmanic festivals are observed equally by the Muslims.

5. Besides the above yearly festivals, the Muslims have also a weekly holiday, Friday, *Jumʿa*, *Jumuʿa* (cf. CALENDAR [Muslim] and Bukhārī, i. 194 f.). Work is not forbidden on Friday; but every good believer is expected, even if he thinks that he has an excuse for other days, to take part on that day in the common prayer in the mosque (*jāmiʿ*, *masjid*), and to hear the address (*ḥuṭba*) of the *imām* or *ḥaṭīb*, which follows the prayer. The observance of the rest of the day is private, or taken up with the *dhikr* exercises of the dervishes.

FESTIVALS AND FASTS (Nepalese).

—Buddhism and Hinduism are so closely connected that the festivals of Nepāl are of as mixed a character as are the religions. With the mass of the people the religious character of the festivals is scarcely recognized. They are occasions of festivity and feasting rather than of prayer and worship. All the national, or *Niwar*, festivals have lost a great deal of their importance under Gurkha rule. The share which individual Niwars take in the different festivals is not optional, but depends upon a curious custom. Under the Niwar kings, from the earliest known times, the acting, on festival occasions, was the duty or privilege of certain families or castes; so also were the dancing, the construction of the cars, the making of masks, and the necessary painting. In each instance the privilege was hereditary, and passed from father to son. The custom continues to the present day. The important Niwar festivals are given below. They are arranged in the order in which they are celebrated, commencing with the month of Baisakh, the first month of the Niwar year.

1. **'Bhairabjatra' or 'Biskati,' in the month Baisakh.**—Bhairava is an incarnation of Siva, the most popular deity of Nepāl, and regarded as the guardian-angel of the country. The deity is essentially Hindu, but has been admitted into the Buddhist pantheon. Dancing and the sacrifice of buffaloes characterize the festival, which is always celebrated at night, except every twelfth year, when it takes place in the daytime.

2. **'Gaijatra,' in the month Sawan.**—This is a festival in honour of the cow. It commences on the first day after the full moon of Sawan. The Hindu festival, where the cow is worshipped, is confined to one day. The Buddhist part of the festival lasts for half a month. The Buddhist *vihāras* and temples are visited, little wax trees (probably commemorative of the sacred Bo-tree at Gaya) are carried, and offerings are made to various Buddhas. Images and pictures are exposed to view in the *vihāras* for fifteen days—from the fifth day before till the tenth day after full moon (*Dassami*), when the festival closes, and the pictures are taken down and carefully put away in the *vihāras*.

3. 'Banhrajatra,' in the month Sawan.—The name applies to feasts which are given from time to time to the fraternity of *banhras*. They occur quarterly, in the months Baisakh, Sawan, Kartikh, and Margh. They are celebrated by the giving of alms to the *banhras* on the part of any patron or any one who wishes to acquire merit, and of the people generally. On this occasion the coronet of Amitābha Buddha is taken from his image in his temple and exposed to public view.

4. Indrajatra,' in the month Bhadu.—This festival, held in Khatmandu, is peculiar to Nepāl. It is held in the beginning of September. It commences four days before the full moon of the month Bhadu, and lasts until the fourth day after.

5. 'Swayambhumala,' in the month Assin.—This is the birthday of Swayambhu. It is a great Buddhist holiday, on the day of the full moon, and there is general Buddhist worship throughout the country.

6. 'Sheoratri,' in the month Phagan. —It is held on the first day of the month, and is a fast, not a feast. It is a purely Hindu festival, but most Buddhists observe it.

7. Small 'Machendrajatra,' in the month Chait.

8. 'Neta Devi Rajatra,' in the same month.

9. Great 'Machendrajatra.'—This is the most important Buddhist festival in Nepāl. It consists of three distinct portions: (1) the bathing of the image of Machendra; (2) the dragging of the image in a triumphal car; (3) unrobing the image and exhibiting his shirt to the people.

10. Festival of 'Narayan.'—Narayan is a form of Viṣṇu, and Buddhists to some extent enter into the worship of the day.[1]

J. H. BATESON.

FESTIVALS AND FASTS (Siamese).—*Introductory.*—Siamese festivals, fasts, and observances are, as a rule, traceable to either Brāhmanism or Buddhism. These two creeds, introduced at a very early date into the country, have ever since existed side by side as rivals for the supremacy, but without any violent struggle, in so far at least as extant records go. The former (in its varied developments, especially Śaivism) was, with few exceptions, patronized by the Court till about 150 years ago, while Buddhism found most support among the masses. This naturally led the rulers of Siam, even when deeply attached to Hinduistic tenets, to assume the rôle of defenders of Buddhism as a matter of policy. Thus in every Siamese capital of the past (as even in the present one, Bāngkōk), and in the chief provincial towns, especially in the south (Malay Peninsula), Brāhmanic temples with a body of officiating Brāhmans, who acted at the same time as State and Court priests, were to be found along with numerous Buddhist shrines and monasteries erected, some by pious rulers, but mostly by the people. Of these temples there were at least three in each town, facing the east, and dedicated respectively to Śiva (that on the south), Gaṇeśa (the middle one), and Viṣṇu (that on the north side). The result of all this was, if not an actual blending of the two religions, the gradual introduction into most of the national festivals and ceremonies of both Brāhmanic and Buddhist rites. This process was further intensified during the reigns of staunch Buddhist sovereigns like Song-tham (1618–28) and Mongkuṭ (1851–68), who both ascended the throne after having spent a considerable part of their life in a cloister. It was especially through the endeavours of the latter ruler that the introduction of Buddhist rites into State and Court ceremonies, which had long remained strictly Śaivitic, reached its climax. It thus comes to pass that nowadays in well-nigh all festivals and ceremonies, even those of unquestionable Hindu origin, we find Buddhist rites associated with Brāhmanic practices. Nor is this all, for the prestige of Brāhmanism, especially during the present dynasty (founded in 1782), having even more considerably dwindled, it may be said that in a good many festivals and domestic ceremonies the presence of the so-called Brāhmans (now a somewhat degenerate body) is solicited chiefly out of homage to a time-honoured tradition which renders them indispensable. Their task consists mainly in calculating auspicious dates, making offerings to the gods and goblins, performing lustrations, blowing *śaṅkha* shells, or striking the 'gong of victory,' and waving their Śaivite hour-glass-shaped drum (*ḍamaru*).

[1] H. A. Oldfield, *Sketches from Nepal*, vol. ii.

The private observances and ceremonies of the Siamese will be discussed in art. SIAM (Buddhism in). In this art. only festivals of a public nature are treated.

For the sake of easier comparison and identification of Siamese festivals introduced from Brāhmanic or Buddhist India with those of their land of origin, the Siamese solemnities are here mentioned in the serial order of the months in which they occur, beginning with Chaitra, the Siamese fifth month. It is with this that the Siamese new year now commences, whereas at an uncertain remote period it began with Mārgaśīrṣa (as in North India till about the end of the 10th cent., according to al-Bīrūnī), the present Siamese first month. Along with public festivals, some solemnities now held only at Court, or abolished of late, but which were formerly more or less public, will also be mentioned. It seems fit, moreover, that the principal state ceremonies periodically performed at appointed seasons should not be passed unnoticed, owing to their intimate connexion with most public festivals, of which they often constitute the predominant feature. The national periodically recurring holiday is the Moon-feast, or Buddhist *Uposatha* festival, which till recently was regularly observed on the 8th and 15th days of the waxing and on the 8th and 14th or 15th days of the waning, but is now superseded to a large extent (since the adoption of the solar calendar in 1889) for civil purposes by Sundays.

i. CHAITRA (5th month).—The greater part of this month is occupied with the New Year festivals, which are actually three, intended to solemnize respectively the commencement of the luni-solar, civil (modern solar), and astrological (old solar) years. Leaving out civil New Year's Day—fixed, since the introduction of the modern calendar in 1889, to fall invariably on the first of April, and which is an empty observance—it remains to consider the other two, owing to their being essentially religious, connected with the old calendar adopted from India on the basis of the Śaka era reckoning, and celebrated with as much pomp as ever, despite the introduction of the new calendar.

1. 'Trut,' or popular New Year.—The festivities last three days: the 15th waning of Phālguna (4th month); the 1st waxing of Chaitra (5th month), or New Year's Day; and the day following. These holidays are an occasion for the people to perform meritorious work and enjoy themselves, after having duly freed the premises from ghosts through exorcistic recitations by Buddhist monks, who are presented with food and requisites. The task is accomplished on a much larger scale in the capital, where recitations of the *Āṭānāṭiya sutta* (an uncanonical compilation) are held all round the royal palace and the city walls, and guns are fired off from them at regular intervals during the night to frighten the goblins. The people carry protective

rings of unspun cotton cord on the head, and threads of the same material across the shoulders for the same purpose, so as to be freed from evil influence on New Year's Day. On this date (1st of Chaitra), oblations to the gods are made and ancestral worship is performed. At court, after this and a *homa* sacrifice offered on the sacred fire by the Brāhmans, the 'name' of the year is changed. This ceremony, termed *Saṁvachchhara-chinda*, consists in changing the name of the animal denoting the place of the year (*saṁvatsara*) in the duodenary cycle (of the twelve animals; see CALENDAR [Siamese]) after which the year is designated, but not the 'figure' or serial number of the year in the era, the altering of which is to be effected later, on *Meṣa-saṅkrānti*, *i.e.* at the completion of the astrological (solar) year. The people are allowed free gambling—an extraordinary concession of which full advantage is taken. In connexion with this popular New Year festival the following other important ceremonies are performed.

2. **'Snāna,' or 'Gajendrāśva-snānaṁ' ('sprinkling of the lordly elephants and horses,' a later reduced form of it).**—This has been but recently abolished. It was originally a lustration of arms, a general purification of the army, like the Hindu *Nīrājanā*, which was restricted later to a formal sprinkling of the elephants and horses from the royal stables, effected from stands with lustral water as they filed past in a stately procession. On the same occasion the *Vṛddhi-pāśa* Brāhmans (*i.e.* those in charge of auspicious rites in connexion with elephants) uncoiled, in the royal elephant warehouses, the ropes and nooses stored therein for elephant-catching, and performed a hook and noose dance in honour of Viṣṇu, simulating the capture of elephants. This took place on the third day of the waning. Next morning the ropes and nooses were coiled up again and stored away. Both these ceremonies were repeated on the 4th new-moon day of the 11th month (Aśvayuja) in connexion with the half-year festival. The purport was a general review of the army, so that all its equipment might be kept in proper order and efficiency.

3. **'Thü-Nam,' or drinking of the water of allegiance.**—This is a ceremony performed with the utmost splendour in the royal Buddhist temple of the capital (and in the chief temple of every provincial town) with the concourse of all officials. It takes place on the third day of the waxing, and is repeated in connexion with the half-year festival on the 13th day of the waning of the 10th month (Bhādrapada). Water is loyally drunk, in which royal weapons (symbols of the sovereign power) are dipped, adjurations being pronounced the while, so as to make it fatal to traitors. In essence this is tantamount to a water-ordeal, of the kind that formerly obtained in the Hindu Courts (cf. Bṛhaspati, in *SBE* xxxiii. [1889] 318).

4. **'Songkrān,' or astrological (solar) New Year.**—This falls nowadays on either the 12th or the 13th of April, the date of the assumed entrance of the sun into Aries, according to the traditional local (Hindu-imported) reckoning. The day is termed *Mahā Sŏngkrān* day (*Mahā-saṅkrānti* being substantially the same as *Meṣa-saṅkrānti*), and with it commences a three days' festival, the year's serial number in the era being changed with much ceremony on the third day, which is actually regarded as New Year's Day (solar). On this occasion the king performs with much splendour a kind of shower-bath with lustral water, termed *murdhābhiṣcka*, and afterwards he sprinkles the sacred images. The people, amid much rejoicing and free gambling, as on the popular New Year's Day, perform a good deal of meritorious work by washing the Buddha images in the temples, sprinkling the monks and their relatives as an act of respect, and building sand-hillocks in the temple-grounds. They partake of rice gruel, and offer *piṇḍas* of food, and lighted incense-sticks and tapers, to the statues of the Buddha.

ii. VAIŚĀKHA (6th month).—**5. Ploughing festival.**—This important state ceremony, traceable to the remotest antiquity in India, is performed up to the present day in Siam in order to usher in auspiciously the tilling of paddy fields. The people dare not, in fact, commence cultivation till this festival has been held, in which prognostics are also drawn concerning the prospects of the crop. It takes place on a lucky day designated by the astrologers in the waxing part of Vaiśākha (usually in the early days of May). A high official, formerly holding the title of *baladeva*, and representing the king (now the task falls *ex officio* to the Minister of Agriculture), performs the ploughing in a Crown field, attended by the Brāhmans, a large retinue, and crowds of people who naturally take a keen interest in the ceremony. After having cut three concentric furrows with a gilt plough drawn by richly caparisoned bulls (the sacred bulls were formerly employed), he scatters over them seeds which have previously been hallowed by *mantras* (Brāhmanic, and now also Buddhist, recitations). The bulls are next fed with seven different sorts of seeds in order to draw prognostics: those they most relish will be plentiful during the year. In ancient times the king presided in person, but later he delegated authority to the Minister of Agriculture (who held, according to the ancient statutes, the title of *baladeva* in allusion to Baladeva or Balarāma, Kṛṣṇa's brother who accomplished so many wonders with his ploughshare). This dignitary was on such an occasion, till half a century ago, regarded as a mock-king, not only from his appearing in princely attire, surrounded by a retinue carrying princely insignia, but also from his being entitled, during the three days that the festival lasted, to collect all tolls and ship-dues in the capital and its suburbs, while the real king kept retired in his palace without transacting any state business. The present king of Siam, however, did away with this absurd custom by attending on 21st April 1912 the ploughing festival, to which he drove in his motor car, his presence being greatly appreciated by all as a token of the sovereign's interest in promoting the welfare of the national agriculture.

6. **'Viśākha-pūjā.'**—This is a strictly Buddhist festival, occurring at the full moon of Vaiśākha, which is held to be the anniversary of the birth, enlightenment, and death of the Buddha. For three days the people bedeck their dwellings festively, suspending flower wreaths, garlands, and lanterns which they light at night. They assemble at the temples to worship the sacred images with flowers, scents, and lamps, and to hear religious addresses. They adorn the holy spires with flags and streamers, present offerings of food, etc., to the monks, distribute alms to the poor, and purchase living animals (especially birds and fish), which they release in homage to the Buddhist precept of showing kindness to all creatures. It goes without saying that the royal temples on the evening of such days are gorgeously illuminated, with the additional attraction of fireworks. None the less the festival is not so intensely popular as the New-Year and Mid-Year ones.

iii. JYEṢṬHA (7th month).—**7. Top-spinning.**—This state ceremony, which was discontinued several centuries ago, used to be attended by crowds of people, to whom it afforded the opportunity of drawing prognostics. Three large tops made of the nine metals (corresponding to the planets that are supposed to rule human destinies), symbolizing

the three gods, were carried out in procession by the Brāhmans from the temple of Śiva and set in motion on a board by means of a silken string of five colours. From the duration of their spin and the kind of noise they emitted, omens were drawn.

iv. ĀṢĀḌHA (8th month).—8. Viṣṇu's sleep.—It is well known that Viṣṇu is supposed to commence his four months' sleep on the Milk Sea on the 11th waxing of Āṣāḍha, a date which is to this day solemnized in India by a festival. This was certainly the case formerly also in Siam, as is evidenced by the state ceremony recorded to have regularly taken place, in the past, at such a season. It consisted in a lustration (*murdhābhiṣeka*) administered to the king by the household Brāhmans on a dais rising in the centre of a pond (representing the one the sea and the other the serpent Śeṣa, Viṣṇu's mythical couch). Besides the above Vaiṣṇava festival (or in connexion with it), the Āṣāḍha, or Midsummer, festival (7th to 14th day of waxing) was likewise celebrated in Siam in bygone days, and at the end of it the Brāhmans began their retreat and fasts. But the festival became in the course of time entirely absorbed in the following Buddhist one.

9. Beginning of 'Vassa,' or Buddhist retreat.—This is solemnized by a festival lasting three days (14th, 15th of waxing, and 1st of waning), during the first of which elaborate *vassa* tapers are carried in procession to the temples, where they are to be lighted and kept burning for the whole year. Offerings of robes and requisites for the incipient retreat-season are liberally made to the monks; and the days preceding it are widely taken advantage of by the youths who seek to gain admission to the holy Order whether as novices or as monks. There is accordingly much animation at this period in and about the temples. On the 15th the magnificent *vassa* tapers (a sort of Paschal candles) are formally lighted by means of 'celestial fire' (which is obtained from the sunbeams through a burning-glass, or, in default, produced with a flint and steel). Those in the royal temples are lighted from candles sent by the king, which have been kindled from the 'celestial fire.' Rehearsals of the Vessantara Jātaka are held in the *Uposatha* hall of royal and other temples by lay devotees engaged for the purpose; Buddha images in the shrines are sprinkled with scented water, and their attire is changed, a scarf being put on their shoulders as befits the rainy season. Among the presents made to the monks are large quantities of bees' wax formed into tapers, artificial flowers, trees with gilt or silvered branches, and tiny figures of birds perched on them, sometimes even entire landscapes to recreate the recluses; or modelled into pineapple-like cakes gorgeously ornamented with ribbons and flowers—all in order to provide light to the monks during their retreat, as they are not allowed to use oil lamps.

v. ŚRĀVAṆA (9th month).—10. 'Tulābhara.'—This state ceremony (well known in India as *Tulāpuruṣa* or *Tulad*), consisting in being weighed against gold, silver, etc., and distributing this in charity, was in the past invariably practised by Siamese kings, and at times also by the queen, at this season; but after the middle of the 18th cent. it fell into disuse.

11. 'Varuṇa-sattram,' or 'Mahā-megha Pūjā.'—This propitiation of Varuṇa and of the clouds was essentially a rain-making ceremony, performed of old in Siam in order to promote the germination of seeds in the fields. It has been since celebrated only in times of great drought, but with the addition of Buddhist rites, whereas it was originally a purely Hinduistic rite, and in it only Brāhmans took part. These, clad in a rudimentary bathing-garb, with streaming hair, read twice a day, for three days in succession, addresses to the rain-gods before a pit, while waving cloud-coloured flags, the images of the gods being exposed to the full heat of the sun all the time.

vi. BHĀDRAPADA (10th month).—A festival termed *Bhādrapada* took place at this season, not explained in the old records, which possibly corresponded either to the *Sakra utsava* (Indra's festival, 12th of the waxing) or to the *Ananta chaturdaśī* (festival of the serpent-god Ananta, 14th). Now the only solemnities observed are the following.

12. Semi-annual renewal of the oath of allegiance.—The adjured water is drunk a second time by all officials on the 13th waning, as at New Year (see no. 3 above).

13. 'Sāt' (Śārada).—This is the Half-Year or Autumnal Festival, termed *Sāt* (*Śārada*) from the autumn season which now begins. The celebration lasts three days (*i.e.* the last one of Bhādrapada and the first two of Āśvina). Originally it was mainly a Śaiva solemnity, connected with the descent of the sun (Śiva) to the realm of the departed (the south), which suggested worship to the *manes*. Of this some traces still survive, although the festival has long assumed a Buddhist character. It is an occasion for merit-making; oblations are made to the gods and goblins, offerings to the monks and novices, especially to such as have joined the Order two months before, and presents of sweetmeats to relatives and friends. Every one partakes of rice cooked with coco-nut milk and sweetened with either honey or sugar.

vii. ĀŚVINA, or AŚVAYUJA (11th month).—14. Lustration of arms.—It being now the half-year season, the sprinkling of elephants and horses, as well as the uncoiling, distending, and re-coiling of the elephant nooses was, till recently, performed with similar ceremonies as at New Year (see no. 2 above).

15. Royal regatta.—Until the downfall of the former capital, Ayuddhyā, in 1767, a regatta used to take place at this time of the year between the king and the queen in their respective state barges, in which a number of officials also joined, racing between them. Prognostics were drawn: if the king's barge lost, it betokened prosperity to the realm; but, if it won, it was a sign of impending calamities and famine. This state ceremony was discontinued, but a possible survival of it in a modified form may be the annual regatta that takes place on the 8th waning, in honour of the Pāk-nam Pagoda (a spire rising in the middle of the river Mē-nam near its mouth), though this is strictly a Buddhist festival.

16 and 17. Termination of the 'Vassa,' or Buddhist retreat; floating of lamps at night.—These are two festivals occurring contemporaneously on the 14th and 15th of the waxing and on the 1st of the waning. Although now believed to be both connected with Buddhism, there can be little doubt that the second one is merely the traditional continuation of the Hindu *Dyūta* or *Kojāgara* festival, held at full moon in honour of Indra and Lakṣmī, when lamps are also lighted. In Siam little rafts with lamps are floated on the streams these three nights, with the object of thus worshipping the footprint which the Buddha is said to have left on the sandy bank of the Narmadā, at the instance of the Nāgas. Round fish-pies, some of large size, are made and partaken of. The Buddhist festival ending the *Vassa* is celebrated these three days by worshipping the sacred images, offering flowers to the monks wherewith to adorn the *uposatha* hall in which *Pavāraṇā* is to be held, and the halls reserved for recitations of the *Mahā Jāti*.

18. 'Kaṭhin' processions.—From the termination of the Buddhist *Vassa* on till the end of the month, and even for some days later, presents of

robes and requisites for the monks to use during the coming dry season of outdoor errands are conveyed to the temples in solemn processions, either by water or by land. Such pageants are termed *Kaṭhin* processions, from the *kaṭhina* robes presented on such occasions to the monks, which, according to old custom, should be made from raw cotton, spun, woven, cut, and stitched together in the course of a single day and night, such a feat being considered highly meritorious. The Royal processions taking place for the same purpose at this season are famed for their magnificence, which makes them well worth seeing. Before A.D. 1630 or so they were held only by water, but since then King Prāsād Thōng instituted also the land *Kaṭhin* or *Kaṭhin Bok*, of which Tachard in 1685, Kaempfer in 1690, and nearly every other traveller in Siam, have spoken in glowing terms.

19. **The 'P'hā-pā' serenades.**—Robes and requisites are also presented to the monks in a somewhat stealthy manner which enhances the fun of the donation. This is accomplished at night by a surprise party, which proceeds by land or boat in silent procession to the precincts of the monastery singled out for the purpose, and lays the robes and other gifts in and about the bush (whence the name *P'hā-pā*, meaning 'jungle cloths,' *i.e.* robes abandoned in the woods). When everything is ready displayed, the party suddenly bursts into a lively serenade, with musical instruments and singing, thus awaking the monks, who, as soon as daylight sets in, come out to gather the presents.

viii. KĀRTTIKA (12th month).—20. **Feast of Lamps.**—This embraces two distinct festivals: (1) the hoisting of lamps on poles on new-moon day and the lighting of them at night, till the second day of the waning, when they are lowered; (2) the floating of lamps in the streams at night on the 14th, 15th, and 16th days of the moon, with the eventual addition of fireworks. This second form of illumination seems, however, to be connected more especially with the festival hereafter explained (no. 21). On the other hand, the aerial lanterns hoisted on poles, as aforesaid, are kept burning to scare away goblins as in time of epidemics (cf. the *rakṣā-pradīpas*), and, it is believed, also to retain the water from draining off the paddy fields, for the ears of rice would not attain maturity if the yearly inundation were to abate so early. Hence the festival is a very popular one, like its counterpart, the *Dīwālī* or *Dīpāwali*, in India. They closely correspond, although the *ākāśa-pradīpas* (lamps raised on poles in the air) are in India lighted in honour of Lakṣmī. We have here to do essentially with a festival in honour of Viṣṇu and his consort, for it is known that on the 11th day of the new moon of Kārttika the god awakes from his four months' sleep, and that his victory over king Bali (*Vāmana avatāra*) took place at this season.

21. **'Kārttikeya' festival.**—The main feature of this in Siam, besides the popular one of lamp-floating, was a state ceremony, recently abolished, held in honour both of Kārttikeya (or Skanda, the Hindu Mars, son of Śiva) and of the Pleiades who fostered him. It took place at the time of the moon's conjunction with this star cluster, *i.e.* shortly before full moon. It was a fire-festival, in agreement with Kārttikeya's legendary birth from fire. Three stands were set up in front of the temples, respectively, of Śiva, Gaṇeśa, and Viṣṇu; and by the four sides of each stand, facing the four points of the compass, hillocks were erected, formed of earth mixed with cow-dung. Three earthen pots containing paddy, beans, and tilseed, and provided with a wick dipped in oil in the centre, were placed on the top of poles, one by each stand; and, the wicks having been lighted, fire was kept burning in the pots for three days. Prognostics were then drawn by means of twelve staves, having rags dipped in oil tied at one end. After the setting of fire to these the staves were hurled, four at a time, in the direction of the four hillocks rising round each stand. From the side on which they fell it was argued that prosperity would grace either the king, the clergy, the officials, or the people. The ceremony ended with oblations of parched rice to the earthen pots, and addresses to the three gods. Similarly in Southern India, on full-moon day, rice-meal buns are made, with a cavity in the centre filled in with *ghī* and provided with a wick which is lit; and bonfires are kindled on the mountain-tops in honour of Kārttikeya. This is practically a Śaivite festival held as a counterpart to the Vaiṣṇavite one mentioned above, which in India is by some celebrated in honour of Durgā, the wife of Śiva. So are eventually the lamps set out afloat on the streams. In Siam this lamp-floating is accomplished more generally and with far more splendour than in the month of Āśvina (see nos. 16 and 17), because the rains are now at an end and fine weather has set in. Many of the lamps are quite elaborate creations, carved out of squill stalks, some being in the form of rafts and others of barges, with daintily carved figures in them, or neatly arrayed with lanterns, tapers, and fireworks, which are lit when they are set adrift.

ix. MĀRGAŚĪRṢA (1st month).—22. **Feast of speeding the outflow.**—This ceremony, literally 'driving away the water,' of high importance in connexion with agriculture, was not performed regularly every year, but only in years of great floods. The last time it took place was on the occasion of the memorable flood of 1831. It has since fallen into disuse. The purpose was to drive away the flood-demon, or, in plain language, to cause the water in the river to abate rapidly, so that the paddy fields might be drained and the harvest accelerated. To this end the king proceeded down the river in his state barge, escorted by a pompous water-procession, and repeatedly waved the royal flabellum in the direction of down-stream, as a magic intimation to the water to flow off rapidly. Kaempfer and other contemporary writers mistook the royal flabellum for a sword, and thus put on record that the king 'cuts the water with a knife in order to make it fall,' which is, of course, absurd (see Kaempfer, *History of Japan*, Glasgow, 1906, i. 73, where he confounds this ceremony with that of *Kaṭhin-nam*, 'Water Kaṭhin,' for which see no. 18 above).

23. **Kite-flying festival.**—This was a state ceremony as well as a public festivity. Large paper kites were flown with the object of calling up the seasonal wind by the fluttering noise they made. The festival was obviously connected with husbandry, as the wind prevailing at this season is the north-east monsoon, which, when beginning to blow, sweeps the rain-clouds away, so that fine weather sets in and the yearly flood quickly abates, the fields drying up rapidly. This festival was discontinued after the downfall of the former capital, Ayuddhyā. La Loubère, who was in Siam during the last quarter of 1687, mentions that the kite 'of the king of Siam is in the air every night for the two winter months, and some mandarins are nominated to ease one another in holding the string' (*Historical Relation of the Kingdom of Siam*, London, 1693, p. 49). From this it follows that the kite-flying was continued for many days in succession, till the desired result (the setting in of the north-east monsoon) had been attained.

x. PAUṢA (2nd month).—24. **'Puṣyābhiṣeka.'**—This state ceremony, discontinued after the downfall of the former capital, Ayuddhyā, consisted in

the king ascending a dais bedecked with seven varieties of flowers, upon which he bathed and changed his attire, while the eight household Brāhmans who attended upon him performed a sort of angel dance. The rite corresponds to the Hindu *Puṣyābhiṣeka Snāna*, or ceremonial bathing of a king when the moon stands in the asterism Puṣya (nebula in Cancer).

25. **Worship of the sacred bull.**—This festival, which has dropped out of use for several centuries, consisted in leading the sacred bull (Nandi, the milk-white vehicle of Siva and the guardian of all quadrupeds) out of the royal stables on to a dais two cubits high, on which it was made to stand facing the North, a sacred fire being kindled in front of it. Its horns and hoofs were decked with golden ornaments studded with the nine gems; golden medallions and tassels hung from its ears; a silken cord was passed through its nostrils; the post to which it was tied was richly ornamented. Gold, silver, and silken cloths were heaped underneath the belly of the sacred animal, which was fed and watered from golden vessels, the king's children themselves helping in handing it grass and dainties. The four chief Brāhmans stood at the four corners of the dais sacrificing to the fire, from evening till next morning, when the king arrived in state preceded by the *baladeva*, or Minister of Agriculture, carrying a tray full of parched rice. The royal pageant circumambulated the bull nine times; then a state banquet followed which ended the ceremony. This festival may have originated from the ancient Hindu one of letting loose the sacred bull (*Vṛṣotsarga*), which was, however, performed on full-moon day of Kārttika, or even in Aśvayuja (see *Pāraskara Gṛhyasūtra*, iii. 9). It was somehow connected with agriculture, or, at any rate, with the welfare or multiplication of cattle.

26. **Swing festival.**—This very popular festivity is held with much pomp for the reception of Śiva, and is followed by a quieter one to welcome Viṣṇu. It has been celebrated from the remotest period in all old Siamese capitals and chief cities, and in some of the latter (*e.g.* Ligor) swing-pillars exist to this day and a semblance of the ceremony is still performed. But it is in Bāngkōk, the present capital, that it survives in all its splendour. As it falls about the vernal solstice, its original purpose was undoubtedly that of a solstitial festival, in which the swinging and the circular dances that follow it symbolize the revolution and, perhaps, the birth of the sun typified in its return to the northern hemisphere. But the celebration is at the same time connected with agriculture, it being presided over by the Minister, the *baladeva*, the mock-king who also performs the ceremonial ploughing (see no. 5 above). It is only within the last sixty years or so that other dignitaries have been appointed in succession to relieve him of the task. The descent of Śiva on earth occurs on the 7th waxing, when the rites begin; his departure takes place on the first day of the waning. The swinging in his honour is performed on the 7th day of the waxing in the forenoon, and on the 9th day in the afternoon. The presiding dignitary proceeds on both these dates in great state, escorted by a magnificent procession, to the esplanade opening in front of the three temples of the gods, where the swing-pillars rise. These are a substantial permanent wooden structure, some sixty feet in height; the swinging is performed by four Brāhmans who carry on their heads a sort of snake-like hood, and it is repeated twice over again by two other parties of them, changing the swing-board at every turn. While swinging, each party must snatch away with their teeth a money-bag suspended at some distance from the top of a pole. When the contest is over, the twelve swingers, wielding buffalo horns, perform, in front of a stand, where the mock-king sits, a circular dance in three rounds of three circuits each, during which the dancers dip their horns in a basin full of water and sprinkle it upon one another (cf. the *rāsa*, or sportive dance, performed by Kṛṣṇa's cowherds and cowherdesses). The mock-king must witness all this seated, with his left foot resting on the ground, but with his right foot uplifted and resting upon his left knee. He must retain this posture all the time the performance lasts. When it is over, he leaves, escorted by the procession. Evidently the origin of all this is the Hindu *Dola* or *Dola-yātrā* festival (which is, however, a spring solemnity held on the full-moon day of Phālguna), with which it has some features in common, while others may have become lost in its native land. But the swing pillars are said to represent Mount Meru; the ropes sustaining the swing-board, the serpent Śeṣa; and the three boards or seats employed successively in turns, the three gods Āditya (the Sun), Chandra (the Moon), and Dharaṇi (the Earth); and thus the festival may after all be held in commemoration of the mythical churning of the Ocean of Milk effected by the gods. The legend in connexion with this is, in fact, that the gods made use of Śeṣa (or Ananta, or Vāsuki) as a great rope, which they twisted round the mountain Mandara, made to do duty as a churning-staff resting on Viṣṇu in tortoise form, both ends of the rope being held by the gods in their hands to pull to and fro alternately. The description of so peculiar a sort of churning device closely suggests the image of the swing used in this Siamese festival. The swinging, it should be noticed, is effected from east to west, and, therefore, in the direction of the course of the sun.

27. **The reception of Viṣṇu.**—The Vaiṣṇavite festival immediately following the Śaivite one just described is performed quietly in the temple of Viṣṇu. It begins on the first day of the waning, and ends on the sixth, the date of the god's departure from the world of men. The statues of Viṣṇu, Lakṣmī, and Maheśvarī are carried about the town in procession before moonrise, as befits the god of darkness (the night-sun). In former times the king of Siam, mounted on an elephant, used to escort the gods Śiva and Viṣṇu in procession in and out of the temple.

xi. MĀGHA (3rd month). — 28. **'Dhānya-dāha' (or 'Dāhanam'), Festival of burning of the ears of paddy.** — This was another popular agricultural ceremony, associated with the harvest, as a form of thanksgiving for the same; it has since been abolished. It must somehow have originated from the old Brāhmanic rite of partaking of the first-fruits of the harvest (*Āgrayaṇa* sacrifice, for which cf. the Gṛhyasūtras). A canopied dais was set up in the Crown paddy fields, to which the usual mock-king proceeded in state as on the occasion of the Ploughing Festival (see no. 5 above). Before the dais a large *chhattra* (state conical umbrella) was erected, having three storeys, made respectively of a different variety of paddy ears entwined together. To this structure the mock-king set fire; then his followers, divided into four parties differently attired and representing the gods of the four quarters and their retinue, rushed in to contend for the umbrella. Prognostics were drawn according to which of the parties succeeded in obtaining possession of the spoils.

Conveying the paddy home.—The ceremony just described was followed by that of conveying home the harvest. When the threshing of the new paddy had been completed on the Crown fields, the king proceeded thither in state, loaded some of the grain on his paddy sled, and had this

drawn by members of the royal family to the palace, by means of a rope made of twisted paddy straws with the ears still on. Upon reaching the palace he caused a large conical umbrella to be made with this rope, while from the fresh ears gathered he had the juice expressed. This was then made into gruel by the addition of coco-nut milk and sugar, and sent as an offering to the head monks of the royal monasteries. It goes without saying that such ceremonies were followed by the people in and about the capital with the keenest interest, while in the country the harvest operations were, and still are, celebrated by the peasantry with oblations to the gods and rites similar to those already described, though on a less pompous scale, but amid lively pastimes and intense rejoicing, of which harvest songs (especially threshing and reaping ditties), joined in alternately by men and women, form the chief and most pleasant feature.

29. **'Śiva-rātri,' Festival of Śiva's night.**—This is, as the name implies, strictly Śaivite, and has been celebrated from the remotest period in Siam on full-moon day of Māgha, it being derived from the similar Hindu festival more correctly termed *Mahā Śiva-rātri* (which is, however, held on the 14th day of the waning). An earthen pot full of water, but with a hole in the bottom, is suspended by means of strings to four poles, and beneath the pot a *liṅga* is placed, which rests on a basement of the usual symbolical form, provided with a spout. At night the water is let drop upon the *liṅga*, and collected from under the spout into vessels. Shortly before dawn, rice is cooked in the temple of the god, with the addition of honey, palm-sugar, and other condiments, and when ready it is distributed all round in small portions to the bystanders, to be partaken of. At daybreak all go down to bathe in the river or creeks, and wash their heads with some of the water collected from underneath the *liṅga*. It is believed that all impurities and sinful taints are thereby removed and carried away by the hallowed water.

30. **'Māgha-pūjā.'**—This is a purely Buddhist ceremony, revived only some sixty years ago by King Mongkuṭ. It is held on full-moon day, to commemorate the exposition of the *Pātimokkha* made on that date by the Buddha to his 1250 disciples of the four congregations. The celebration takes place in the royal temple, where, after feasting the chief monks in the forenoon, a recitation of the *Pātimokkha* and of the Buddha's discourses relating thereto is held in the evening, after which 1250 tapers are lit round the temple in honour of the saintly company referred to above. The full-moon period of this month is also largely taken advantage of by the people for making religious pilgrimages to various sacred spots and shrines in the country, such as, *e.g.*, the models of Buddha's footprint (*P'hraḥ-bāt*) and shadow (*P'hraḥ C'hāi*), two stone benches on which the Blessed One is reputed to have rested, etc.

xii. PHĀLGUNA (4th month).—There occurs no special observance or celebration, except the preliminary ones connected with the popular New Year festival (see no. 1 above).

LITERATURE.—There is no reliable account of Siamese festivals and fasts, in works that have hitherto appeared on Siam. For the literature of Siamese Buddhism generally see SIAM (Buddhism in).

G. E. GERINI.

FESTIVALS (Slavic).

—Beginning with the winter solstice, the festivals of the pagan Slavs, attested in historic texts, folklore, and popular vocabulary, seem to have been as follows:—

Kračun or *koročun* was the festival of the shortest day. The popular word for the solstice itself is *koleda*, *koliada*, which is simply a transcription of the classical *calendæ*, καλάνδαι. The people, as a rule, personified Koleda and made a mythical character of her (cf. Ital. Befania=*epifania*; Eng. 'Father Christmas,' etc.).

At the coming of spring among the Czechs, the Serbs of Lusatia, and the Poles, a figure called Marena, Marzana, was thrown into the water; this probably symbolized death, that is to say, the numbing of the earth by the cold of winter.

In the month of May there was a festival of roses (*Rusalia*).

At the summer solstice fell the festival of *kupalo* (festival of the bath) among the ancient Russians, coinciding later with the Christian festival of St. John (June 24). This name seems to have been derived from the verb *kupati*, 'to bathe,' perhaps because river-bathing begins in the month of June, perhaps—and this designation would be produced under a Christian influence—because John was baptized by immersion.

The chronicle of Thietmar (bk. vi.) supplies a very detailed description of the annual festival celebrated at Arcona in the island of Rügen in honour of the god Svantovit. The description is too minute to be reproduced here. The festival ended in a great feast, in which it was a religious duty to violate every rule of temperance. According to Helmold (i. 52), the sacrifices of the Baltic Slavs were accompanied by feasts and orgies. The guests kept a cup passing round and round, pronouncing over it meanwhile formulæ not of consecration but of execration (Helmold was evidently thinking of the consecration of Mass).

According to the Czech chronicler Cosmas, prince Bretislav in 1092 suppressed the festivals celebrated by the Czechs about the season of Easter—festivals during which offerings were carried to the springs, and victims were sacrificed to the demon.

One of the biographers of Otto of Bamberg (Ebbo, ii. 12, 13) speaks of annual festivals of a very rustic and warlike character, which were held at Pyritz and Volyn by the Baltic Slavs. For festivals in honour of the dead, see artt. ARYAN RELIGION, in vol. ii. p. 25 ff., and DEATH AND DISPOSAL OF THE DEAD (Slavic), vol. iv. p. 509.

LITERATURE.—Louis Leger, *La Mythologie slave*, Paris, 1901, *passim*.

L. LEGER.

FESTIVALS AND FASTS (Teutonic).

—Among the Germanic races, religious festivals seem to have afforded the earliest occasions for intertribal intercourse. Tacitus relates of the Germans that 'at a certain period all the tribes of the same race assemble by their representatives in a grove consecrated by the auguries of their forefathers and by immemorial associations of terror' (*Germania*, 39). Some seven centuries later a religious festival at Skiringsal, in Southern Norway, seems to have united persons who certainly had no political organization in common; and this was probably the case with the great religious festivals held every nine years at Upsala; for the 11th cent. Adam of Bremen states that it was the custom in all Swedish lands that a common festival should be held at Upsala (*Mon. Germ.* vii. 380). We have Thietmar of Merseburg's authority for a similar nine-yearly festival at Lejre in Denmark (*ib.* iii. 739), but all the other public festivals of which we have any knowledge appear to have been annual. Of these the most important all over Germanic territory were three in number: one in the autumn, one at midwinter (Yule), and one at midsummer. But, though the Germanic peoples were thus more or less agreed as to times and seasons, the religious significance attributed to these festivals varied in different countries. Thus, among the Scandinavians we are repeatedly

told that the autumn festival (at the 'winter nights') was 'for plenty,' and it was a favourite time for weddings, whereas among the Saxons this feast seems to have been closely connected with the cult of the dead; and that this was the more usual significance of the autumn festival seems clear from the fact that the Church found it advisable, in the 9th cent., to alter the date of the Feast of All Saints from spring to autumn. In England, we know that the autumn festivities gave the name to the month known as *Blótmónath* (cf. Swedish dialectic *Blotmånad*), because, as Bede informs us, it was during this month that the people sacrificed to their gods the cattle slaughtered during the autumn. The importance of this festival doubtless originated in the necessity of killing off a large number of cattle on the approach of winter. The old heathen midwinter festival lasted from about Christmas Day till Twelfth Night, and the high esteem in which it was held by the Teutons is recorded by writers of all nationalities, from Constantinus Porphyrogenitus, who describes the Yule-tide observances of the Varangian guard at Constantinople, to Bede. The latter tells of the wearing of animal masks at the Anglo-Saxon festival on *Módranicht*, 'the night of the mothers'—which, he declares, fell on the same date as Christmas Eve. Procopius tells of a festival celebrated by the people of 'Thule' (Norway [?]) to greet the sun on its reappearance—presumably early in January. It was, moreover, at this season—about the date of the Epiphany, says Thietmar—that the great nine-yearly festival at Lejre was held.

The Scandinavians, and possibly also the Anglo-Saxons, seem to have had a festival in spring. According to later writers, this was 'for victory'—no doubt with a view to the Viking expeditions of the summer; but an agricultural festival in spring seems to have been common all over Teutonic Europe.

The midsummer festival may be said to survive to this day in rustic observance, especially in the Scandinavian countries, where bonfires are still lighted on St. John's Eve (June 23). But this festival is rarely mentioned in early times; and the conclusion seems inevitable that it had already sunk into a popular observance, of magical rather than religious significance. The originally agricultural importance of some of these heathen festivals is seldom indicated by the earlier sources, and popular customs of later times afford almost the only evidence for the close connexion of heathen festivals with agricultural operations. Of these rustic observances certain rites, such as ploughing round the fields at Yule-tide, and leaping the fire at Midsummer, are so common in all Teutonic countries as to make it almost certain that they formed part of the original heathen festivals. The older sources, however, lay chief stress on the actual feasting and ale-drinking which was no doubt characteristic of all festivals.

Icelandic sources show that the blood of the sacrificial victims was offered to the gods, while the flesh was cooked and eaten. Horses were much valued as sacrifices, so that horseflesh was identified by Christian converts with heathendom, but excavations of Icelandic temples show that other domestic animals were more common victims. The other integral part of the festival was the ale, which seems to have been brewed in vats so large that Saxo Grammaticus declares that a Danish prince, Hunding, was accidentally drowned in one (i. 36). A missionary on the Continent relates how he came across a party of men sitting round an enormous vat of ale, and that they described themselves as worshipping Wodan. Early Norwegian laws enjoin the brewing of ale before all Christian festivals, and its consumption in the company of neighbours, under penalty of a fine. The Swedish laws of the 13th cent. also speak of a 'legally ordained ale-festival' on the Sunday following St. Martin's Day (Nov. 11). In heathen times, toasts were drunk to the gods and to the memory of departed ancestors. Drunkenness seems to have been an inevitable concomitant of a feast. Tacitus tells us (*Ann.* i. 50) that the Romans surprised the Germans at a festival, and were able to massacre an intoxicated foe. It is Saxo, centuries later, who relates that, while Athisl 'was honouring the funeral rites of Rolf with a feast, he drank too greedily, and paid for his filthy intemperance by his sudden end' (iii. 75). Most of the private festivals in the North were actually described as *öl*, 'ale.' For instance, the *erfi-öl*, or funeral feast, which was very important in Scandinavia and in Northern England, survived in the latter country as *arvel* till twenty years ago.

After the Reformation, 'lyke-wake drinking' formed the subject of many restrictive ordinances for Denmark and Norway. Already in 1576 the 'great excess of meat and drink at funerals' was prohibited, and Christian IV., in 1624, finally suppressed all feasting on the occasion of a funeral. Before that date it is usual in the regulations of Danish gilds that on the death of one of their members the heirs of the deceased shall give the gild-brothers a barrel of ale for the *erffue-öll*. On the Continent, memorial (anniversary) feasts were popular, and Christian priests were strictly forbidden to 'drink wine for love of the dead,' or to join in the festivities connected with such observances. Drinking seems also to have been characteristic of wedding-feasts. In the North the 'ale of departure' and the 'greeting-ale' were additional occasions for festivities. A feature of all these feasts was the vows taken by the chiefs, pledging themselves to some deed of valour, such as a Viking expedition, vengeance on a powerful neighbour, and the like. This custom persisted into Christian times, and the attempt of the Jómsvikings to conquer Norway in the latter half of the 10th cent. is attributed to such a vow, made at a funeral feast.

From the hints our sources afford us, it seems as if the actual feasting took place at night, Tacitus and the Icelandic sagas concurring in the mention of games during the day. That the festivals actually took place in the temples is indicated by the use of churches for this purpose in Icelandic and Scandinavian custom. A post-Reformation bishop complains of 'the carousing and drinking and dancing with fife and drum' which took place within the church-doors on the Monday and Tuesday of a 'wedding-week,' and elsewhere he finds it necessary to assure his flock that eating, drinking, and dancing in church are only fit for the children of the devil (*Danske Magazin*, iii. [Copenhagen, 1747] 60).

If we may judge from the silence of our sources on the subject, fasting for religious purposes seems to have been unknown among the Teutonic races until the introduction of Christianity. It was certainly unknown in Scandinavia, for the Icelandic Laxdæla Saga expressly mentions the extreme interest aroused in a neighbourhood by a Christian convert's Lenten fast.

LITERATURE.—Information regarding the religious festivals will be found in all manuals of Germanic religion, but the following deal more especially with the subject: A. Tille, *Yule and Christmas*, London, 1899; G. Bilfinger, *Das germ. Julfest*, Stuttgart, 1901; K. Weinhold, *Über die deutsche Jahrteilung*, Kiel, 1862; O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, *s.v.* 'Jahrteilung'; W. Mannhardt, *Wald- und Feldkulte*, Berlin, 1875–77; H. Pfannenschmidt, *Germ. Erntefeste*, Hanover, 1878; J. G. Frazer, *GB*[3], 1911, 'Midsummer Observances,' pp. 58–69.

B. S. PHILLPOTTS.

FESTIVALS AND FASTS (Tibetan).—The popular festivals of Tibet are essentially religious in character, and almost all of them are assimilated to a Buddhist type. Even those which manifestly belong to the pre-Buddhist religion, the indigenous *Bon*, are taken part in by the Buddhist lamas as priests.

The word for 'festival' in Tibetan means 'feast-time' (*dus-ston*), which aptly denotes the popular conception of the event, with its cessation from routine work and the preponderance of enjoyment over the religious acts of worship and ceremonial. The term here used for 'feast' (*ston*) is from the same root as 'harvest-season' and 'autumn,' implying plenteous store of food and fruit for feasting upon. It also suggests that originally the great festival was probably in the autumn, after the crops were garnered. The great festivals are called by both lamas and laity 'Great Feast-time' (*dus-ston ch'en-po*), or shortly, 'Great Time' (*dus-ch'en*).

Another term which is less commonly used, and more especially applicable to the Bonist feasts, is *mgron*, or 'banquet,' which in its religious sense denotes a propitiatory feast to the four great classes of beings, namely (1) the Holy Ones, interpreted by Buddhists as the *Triratna* (Buddha, the Law, and the Church), the spiritual teacher of the worshipper and his personal tutelary; (2) the 'Lord'-fiends, she-devils (*ḍākinī*), and tutelary fiends; (3) the six classes of beings (the five unhappy existences [cf. *ERE* iv. 133], and the gods [*ib.* 134]); (4) the aboriginal devils called *gdon* and *bgegs*.

1. General characteristics.—The Tibetan festivals may be broadly classed as (1) indigenous, or Bonist, and (2) Buddhist.

(1) The *indigenous* festivals appear to be for the most part Nature-feasts, in the revolutions of the seasons of the year. They are obviously related to the solstices and equinoxes, and display what seems manifestly to be worship of the powers of Nature, conceived mythologically as benign spirits and malignant demons of darkness, drought, and ill-luck, to be appeased or expelled from the land. In addition to this Nature-cult there is an element of ancestral worship to be seen in the festivals given to the dead and malignant ghosts. The survival of the cult of ancestors (in itself opposed to the principles of Buddhism, which teaches that ancestors do not remain in the tomb, but return to life in new forms) is seen in the elaborate ceremonial to secure repose of the spirit of the dead and the lighting up of the funeral monuments (*ch'orten* [*q.v.*]) wherein are deposited the cremated remains of the more wealthy classes and the actual bodies of the higher lamas—amongst whom the Dalai lamas claim to have as their direct lineal ancestors the early kings of the country, whose tombs and those of their nobles studded the country in the pre-Buddhist period (cf. *ERE* iv. 509).

(2) The *Buddhist* festivals commemorate semi-historical and legendary events in the life of Buddha (his birth, attainment of Buddhahood, death, etc.), and in the life of the two great canonized monks of Tibet, namely, the Indian teacher Padmasambhava (*c.* A.D. 748), the founder of Lamaism, and the Tibetan reformer Tsong-khapa (A.D. 1356–1417), the founder of the modern dominant sect of lamas, the yellow-cap sect (*Ge-lug-pa*), to which the Dalai and other Grand Lama hierarchs belong. Some of these Buddhist festivals appear to have been grafted on to pre-Buddhist feast-days, as is evidenced by the aboriginal rites which they embody and the discrepancy between some of the dates and those current in other Buddhist countries.

2. Ritual.—During the festivals, some of which extend over several days, the laity generally cease from their ordinary work or business; and, whilst spending their time mainly in festivities, also devote more time than usual to pious deeds to avoid the five great sins, muttering their mystic spells, plying their prayer-wheels, circumambulating the sacred buildings, and visiting the temple to bow before the chief images. For the clergy these events entail a large amount of additional celebrations, reading of the sacred texts, and austere vigils and fastings. The ritual exhibits generally both indigenous and Buddhistic elements—the latter being most conspicuous in the celebrations of the yellow-cap sect. The indigenous rites of both private and public worship generally include expiatory and sacrificial ceremonies, though the latter do not usually involve the taking of life, and there are saturnal revels and even orgies.

3. Occasions.—The general feasts, annual and monthly, are held mainly at fixed periodical times. One, the Water-Festival, is movable according to the appearance of a particular star, and occasionally there are special festivals, at irregular times, for passing events, such as the installation or death of a Grand Lama, or war, or pestilence.

The dates for the general festivals are at stated times definitely fixed in the lunar calendar of Tibet (cf. *ERE* iii. 63). But, owing to the disparity between the lunar and the solar year (*ib.*), and the rough adjustment of the same by intercalating a month every few years, the relationship between the dates and the natural seasons has become seriously displaced. Further confusion also has been introduced by the date of the ancient Tibetan New Year, which obviously coincided with the winter solstice, having been transferred by the yellow-cap sect to a lunar date corresponding to January-February. This was manifestly done with the object of making it coincide with the Chinese New Year, which, however, it does not do exactly. Hence the seasonal incidence of the festivals seldom coincides precisely with the actual equinoxes and solstices, rainy season, or harvest, as the case may be. As a result we get, among other anachronisms, 'flower-festivals' in icy January–February.

The *monthly* festivals are the usual ones as prescribed for meditation and fasting in all Buddhist countries, following the Brāhmanical rule, namely, the auspicious days of the new and full moon (cf. *ERE* iii. 78). To these were added later the other two lunar quarter days, so that this holy day, recurring four times a month, came to be called 'the Buddhist Sabbath.' In Tibet it is the 8th and 15th day of each month which are mostly observed, and these are holy days rather than 'festivals.' On these days the lamas fast more or less, partaking of nothing except farinaceous food and tea; and many of the laity do likewise, and on no account take animal life. The lamas spend these days in reading the scriptures, make formal confession of sins (*pratimokṣa*), and perform the rite of 'washing away sin' (*tui-sol*).

The *annual* festivals, which include all the festivals properly so-called, are not enumerated or described in any known Tibetan work. In compiling the following list from his own observations and those of others, the present writer has arranged the events in the order of the Tibetan calendar, and has shown within brackets the corresponding approximate month in the European calendar.

1st month, 1st–3rd day (=February), Carnival of New Year (*Logsar*) in new style.—The festival of the New Year is held on this date in Lhasa and the other centres where the yellow-cap sect of lamas is dominant. Elsewhere it is observed on the old date in the 11th month, about the winter solstice. The popular festivities are generally similar to those of Christmas in Europe. It is a season for cessation from work and for general rejoicing, singing, dancing, feasting, and visiting of friends. Even the younger monks have their restrictions

relaxed, and are permitted to participate for two or three days in the mirth-making. For the event the roads are swept, the houses whitewashed, and the doorways decorated. There is also a pudding, resembling the Christmas pudding of the West, to the eating of which the head of the family invites to his house all the other members and relatives. The pudding is made with raisins, dried apricots, etc., and is brought into the room often with a red flag stuck into it; at other times, when this is absent, a hole is made in its centre, into which melted butter is poured—which, as the fuel of lamps, is said to symbolize light and life. Thus it may emblemize the advent of the New Year's light dispelling the demons of darkness. The flag is admittedly a demon-driving device in Lamaism. The head of the house first partakes of the pudding, next his wife, and then his guests and the rest of the family. During the festivities the people indulge in more food delicacies than usual; and charitable gifts are freely dispensed. A custom of 'first-footing' also prevails.

E. R. Huc describes how at midnight, when the noise of the festivities commenced, 'we had a good mind to get up to witness the happiness of the inhabitants of Lhasa, but the cold was so cutting that after reflection we decided to remain under our woollen coverlets. Unhappily for our comfort, violent knocks on our door, threatening to smash it into splinters, warned us that we must renounce our project. We therefore donned our clothes, and, the door being opened, some friendly Tibetans rushed into our room, inviting us to the New Year's banquet, saying, "New Year has come with plenty. Rejoice, Take, Eat!"' (ii. 216).

Amongst the festivities at Lhasa is the spectacle of 'Flying Spirits,' by performers who glide down a rope stretched from the summit of Potala palace to its base.

1st month, 4th–15th day (=February), Supplication (*sMon-lam*).—This appears to be prayers and expiatory sacrifice for new growth and prosperity during the new year. It is conducted chiefly at Lhasa and Tashilhunpo, and is the greatest ceremony of the year in the Lamaist church, when yellow-cap monks to the number of 30,000 congregate in Lhasa alone, as described in the present writer's *Buddhism of Tibet* (p. 505 ff.). At this festival largess is distributed to the assembled monks (amounting to about ten shillings per ordinary monk, and several hundreds to the higher lamas) from the treasury of the Dalai Lama's Government, as well as from the emperor of China, who is specially prayed for and officially represented by the Amban on the occasion. The prayers continue till the 15th day of the month, which is the anniversary of Buddha's conception, and on this date the great temple of Buddha (the *Jokang*) is illuminated with lanterns. Thereafter the demons are propitiated, and on the 30th day the celebration of 'Deliverance' (*grol-ston*), a festival of relaxation, concludes the feast. A notable feature of this festival is that the civil government lapses or changes hands during the currency of the New Year's ceremonies, which continue throughout the month. The temporal government of Lhasa is removed from its usual custodians, and for the month is placed in the hands of the chief proctor of Dre-pung monastery (to which the Dalai Lama is affiliated), and that monk becomes for the time a *rex sacrorum*, as with the Romans. It probably represents a period during which the administration of justice was suspended to allow of unrestrained carnival or mirth-making, as in the *ἱερομηνίαι* of the ancient Greeks and the *dies nefasti* of the Romans. In Tibet, however, it is made the occasion of excessive extortion of taxes, to escape which many of the residents leave Lhasa during this period. The practice appears to have been wide-spread over Tibet. In Ladak, at the present day, during the New Year festivities the Tibetan ex-ruler is permitted by the Kashmir State to assume royal dignities and to occupy the old palace.

1st month, 15th day (=February), Anniversary of Buddha's Conception.

1st month, 27th day, Procession of the Holy Dagger (*Phurba* or *Vajra*).—This is obviously a Bonist celebration for expelling evil influences from the country. About a thousand Buddhist priests, half of whom are dressed in Chinese costume, emerge from the great temple at Lhasa with drums, etc., and, accompanied by about a thousand mounted Tibetan soldiery, and the high priest of the State Oracle of Nechung, whose attendants carry in state a famous miraculous thunderbolt-dagger (*phurba*) from Sera monastery, file past a throne in the open on which is seated the Dalai Lama. After dancing movements to the beat of the drums, there is raised a series of howls 'like the roar of a tiger,' which may possibly be intended to rouse the sleeping god from his winter slumbers, and would be appropriate in connexion with the old-style festival which occurred at the winter solstice. Last of all follows the foremost Lama of Tibet, the successor and representative of Tsong-khapa, the 'Ti-Rinpoche,' who is usually *ex officio* regent of Tibet (and was so during the British mission of 1904), and a Buddhist priest of the most orthodox Mahāyāna type. His duty is to hurl the dagger against the evil spirit, who is called 'The King of the Serpents and Lord-fiends' (*Lu-gon rygal-po*). This concludes the ceremony amidst great rejoicing.

2nd month, 29th day (=March), Chase and Expulsion of the 'Scapegoat' Demon of Ill-luck.—This ceremony as practised in Central Tibet is described in the present writer's *Buddhism of Tibet* (p. 512 f.). In Ladak it is termed *Naghrang*. Two Lamas called *hlooiar* are stripped and their bodies painted black, on which ground a devil's face is painted in red on the chest and back. Other lamas surround the two figures and recite prayers and incantations, whilst others beat drums and blow trumpets. After an interval the *hlooiars* appear to become possessed with devils, and begin to shout and leap about and rush over the roofs of the houses, chased by the people. Whilst in this exalted state they are consulted as oracles, and eventually they fall down exhausted in a swoon.

3rd month, 15th day (=April), Anniversary of 'Revelation' of the Demonist Tantrik-cult (*Kālachakra*), with sacred masked plays.

4th month, 8th day (=April–May), Anniversary of Buddha's Renunciation of the World.

4th month, 15th day, Anniversary of Buddha's Attainment of Buddhahood, and of his Death (*parinirvāṇa*), Feast of the Dead, or All Souls' Day.—This corresponds to the first lunar month of the Indian calendar, the month *Vaiśākha*, when the moon is full near the Southern scale, and is deemed by the Brāhmans a most auspicious time, to which Indian tradition ascribes the above great events in Buddha's life.

5th month, 5th day (=May–June), 'Buddha as the Physician,' or 'The Medical Buddhas,' and the beginning of the Buddhist Lent (or Rainy Season).

5th month, 10th day, Anniversary of Birth of Padmasambhava.—This is a festival chiefly of the old sects, and is accompanied by masked plays and devil-dances. That at Hemis, in Ladak, is a celebrated fair.

6th month, 4th day (=July), Anniversary of Buddha's Birth and First Preaching of the Law.—This is the occasion for the display of great pictures of Buddha, or of Maitreya, the Buddhist Messiah.

7th month, 10th day (=August), Birth of Padmasambhava (according to Sikkim style).

8th month, 8th day (= September–October), Water-festival and Harvest-festival.—End of Buddhist Lent or Rainy Season with much bathing in the rivers.

9th month, 22nd day (= Oct.–Nov.), Anniversary of Buddha's miraculous Descent from Heaven.

10th month, 25th day (= December), Anniversary of Tsongkhapa's death, usually termed his Ascension or Transfiguration, Feast of Lamps.

11th month, 1st–5th day (= December), New Year Carnival, old style.—It obviously corresponded to the winter solstice.

12th month, 29th–30th day (= Jan.–Feb.), Expulsion of the Old Year with its ill-luck.—This is now regarded as a sort of New Year's Eve ceremony preparatory to the new-style date for the annual carnival. It is probably, however, the festival of the 'Holy Dagger' now held on the 27th of the 1st month (see above). The Lamas invoke the gods to drive away the evil spirits.

4. Fasting (*smyung*, or *bsñen-gnas*) is generally practised by Tibetan Buddhist monks, and also by the uncelibate priests of all sects, on the periodical monthly fasts (*upavasatha*) prescribed by the common code. It is also generally observed on the festival days, and as a preparatory sacrificial rite or penance. The fasting ordinarily consists in abstention from food or from drink or from both, from sunrise to sunset, and total abstention from animal food or spirituous liquor. So intimately is fasting associated with the conception of holiness in the popular mind that the word for 'virtue' (*dge-ba*) is used as a synonym for 'fasting.' Many of the laity also observe a more or less partial fast during these holy days and feasts, as above noted. Fasting is practised with exceptional strictness by the more ascetic Lamas, who are selected to perform not merely expiatory sacrifices to the gods, but also the exorcizing of evil spirits. In this latter regard it is noteworthy that even the low unorthodox priests of a shamanist type, who practise for purposes of sorcery and exorcism the animistic rites of the Bonist cult, also require, as an indispensable condition, to undergo ceremonial purification and be spiritualized by preparatory periods of fasting.

FETICIDE.—See FŒTICIDE.

FETISHISM.

FETISHISM.—**1. Definition.**—Few words have been used with so bewildering a variety of applications as 'fetish' and 'fetishism.' 'Fetish' is derived, through the French, from the Portuguese *feitiço*, which, in its turn, comes from the Lat. *factitius*. A Portuguese-French Dictionary defines it as 'sortilège, maléfice, enchantement, charme.' As an adjective, it means 'made by art,' 'skilfully contrived.' Miss Kingsley observes (*West African Studies*, p. 44) that

'the Portuguese navigators who re-discovered West Africa, noticing the veneration paid by Africans to certain objects—trees, fish, idols, and so on—very fairly compared these objects with the amulets, talismans, charms, and little images of saints they themselves used.'

The above etymology suggests that fetishism was at first regarded as a branch of magic, which, as J. G. Frazer has pointed out, may be either religious or non-religious. The fetish may be a god, or the abode of a god or spirit, helpful to its possessor or devotee; or it may be only a sort of clever device or instrument for attaining ends not otherwise to be accomplished.

The first to draw attention to fetishism as a branch of the study of religion was the French writer, de Brosses, whose interesting and, for the time, remarkable book, *Du Culte des dieux fétiches*, was brought out in 1760. He understands by fetishism 'le culte de certains objets terrestres et matériels,' but includes the religious practices of certain tribes with whom those objects are not so much gods as things endowed with a Divine virtue, such as oracles, amulets, and preservative talismans. He excludes the worship of the Sun.

Auguste Comte, on the other hand, gave prominence to the Sun, Moon, and Earth as 'grands fétiches.' In his Positivist calendar he devoted a whole month to fetishism, instituting festivals to Animals, Fire, the Sun, and the Moon. To him and to his followers fetishism is practically Nature-worship. They apply the term to the first stage in the development of religion, in which the natural object or phenomenon is a direct object of worship, not a mere or less anthropomorphic deity who has his abode in it, or controls it. It seems undesirable, however, to use 'fetishism' in a sense so far removed from its ordinary acceptation and conveying an undeserved stigma. Nature-worship, though not the highest form of religion, is pure and noble, compared with the cult of 'something irrationally reverenced'—to use a phrase borrowed from the definition in the *OED*. Other scientific writers have not followed Comte's example.

Herbert Spencer's view of fetishism is radically different from that of Comte. In his *Sociology* (i. 313) he says:

'The unusualness which makes an object a fetish, is supposed to imply an indwelling ghost—an agent without which deviation from the ordinary would be inexplicable. . . . Only when there is an unfamiliar appearance, or motion or sound or change, in a thing, does there arise this idea of a possessing spirit. The Chibchas worshipped lakes, rivulets, rocks, hills, and other places of striking or unusual aspect. Indirect evidences from all sides converge to the conclusion that the fetish-worship is the worship of a special soul supposed to have taken up its abode in the fetish, which soul, in common with supernatural agents at large, is originally the double of a dead man.'[1]

It will be seen that the fetishism of Comte and that of Herbert Spencer are mutually exclusive. It is, therefore, not surprising to find that, while the former makes it the primary stage of all religion, the latter regards it as a more recent development. Herbert Spencer's attempt to bring Nature-worship within the scope of his ghost-theory of the origin of religion is a veritable *tour de force* of sophistical ratiocination. Goblet d'Alviella, who calls Nature-worship 'primary fetishism,' is nearer the truth when he says, in his *Hibbert Lectures* (p. 82):

'Man, having been led by different routes to personify the souls of the dead on the one hand, and natural objects and phenomena on the other, subsequently attributed to both alike the character of mysterious superhuman beings. Let us add that this must have taken place everywhere, for there is not a people on earth in which we do not come upon these two forms of belief side by side and intermingled.'

[1] Lippert's definition of fetishism as 'a belief in the souls of the departed coming to dwell in any thing that is tangible or visible in heaven or earth' (*Die Religionen der europäischen Culturvölker*, Berlin, 1881), seems little more than an echo of Herbert Spencer's.

No writer has done more to elucidate this subject than Tylor, who, in his *Primitive Culture*[4] (ii. 144), defines fetishism as

'the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects'—'vessels or vehicles or instruments of spiritual beings.' 'To class an object as a fetish,' he adds (p. 145), 'demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think this of such objects; or it must be shown that the object is treated as having personal consciousness and power, is talked with, worshipped, prayed to, sacrificed to, petted or ill-treated with reference to its past or present behaviour to its votaries.'

This is very clear and convenient. It covers a very large proportion of what is usually understood by 'fetish,' and applies with special force to the ideas prevalent in West Africa. It deserves general acceptance, if we are not to consign the word to the terminological scrap-heap as so blurred and disfigured by indiscriminate use that it is unserviceable and misleading. There is much temptation to do so.

Goblet d'Alviella's definition of fetishism is closely akin to that of Tylor. He calls it 'the belief that the appropriation of a thing may secure the services of the spirit lodged within it.' He distinguishes between the talisman or the amulet, in which the spirits act on inanimate things from without, using them as implements, and the fetish, when the spirits are embodied in a concrete object —a distinction which, he says, is already recognized by the greater number of savage races. Max Buchner, on the other hand, thinks that fetishism belongs more to the realm of art than of religion, and that, instead of 'fetish' or 'idol,' we should say 'amulet' or 'medicine.' Others call a fetish a magical appliance, or 'an object conceived of anthropopathically.' Waitz (quoted in Schultze, *Fetishism*, p. 241) says that 'a fetish is an object of religious veneration, wherein the material thing and the spirit within it are regarded as one, the two being inseparable.' Travellers have added their quota to the confusion. Miss Kingsley, for example, means by fetishism the whole system of West African religion, of which, as she points out, the worship of spirits embodied in material objects forms only a part. Other travellers have applied the term to the material symbols of the great Nature-deities. Lexicographers naturally reflect the views of anthropologists and travellers. Perhaps Webster's definition represents as accurately as any the most general use of the word, viz. 'a material thing, living or dead, which is made the object of brutish or superstitious worship, as among certain African tribes.' Littré says: 'Fétiche—objet naturel, animal divinisé, bois, pierre, idole grossière, qu'adorent les nègres des côtes occidentales de l'Afrique et même de l'intérieur des terres jusqu' en Nubie.' No wonder that Max Müller exclaimed—'fetishism, whatever that may mean'!

2. Classification.—The variety of definition and opinion indicated above is not due to mere wanton caprice. It is the reflexion of a very great and real complexity in the subject-matter. The evidence on which anthropologists have based their views is enormous in amount, and of a very heterogeneous kind. It comes to us from all parts of the world, though its chief source is West Africa. There are at least five distinct classes of objects to which it relates, all of which fall under the general description of material objects worshipped, honoured, or esteemed for something more than their physical properties or commercial value.

(1) CLASS I.—*Natural objects and phenomena.*—The Sun, the Sky, and the Earth (as a source of food) almost universally hold a leading position among personified things of this class. Æschylus's Prometheus extends the list in his magnificent appeal to the Nature-deities to witness the injustice done him by the later generation of anthropomorphic gods:

'O Sky divine, O Winds of pinions swift,
O fountain-heads of Rivers, and O thou
Illimitable laughter of the Sea,
O Earth, the Mighty Mother, and thou Sun,
Whose orbèd light surveyeth all!'
(*Prometheus Vinctus*, 88 ff., Morshead's tr.).

When once the personification, followed by the worship, of a few of the most striking and most powerful objects (distinguished by the negroes as 'grand fetishes') has been accomplished, others follow easily, as the moon, trees, rivers, wells, mountains, rocks, and thunder. Nor does the process stop here. Having personified the most splendid, benignant, and awful objects of Nature, the active, though by no means powerful, imagination of the savage runs riot and deifies indiscriminately all manner of objects of no intrinsic importance or significance, as curious pebbles, leaves, etc. Japanese myth speaks of a time when trees, rocks, leaves, and foam had the power of speech, and evil deities buzzed like flies in the 5th month. It is on these lower and more frivolous levels of Nature-worship that 'teratism,' or the love of the curious and extraordinary, to which Herbert Spencer (*Sociology*, i. 313) attached an exaggerated importance, finds its chief sphere of action. As a matter of fact, the great Nature-divinities are not of this class. The Sun is not worshipped because he is remarkable, abnormal, or extraordinary, but in gratitude for his daily light and warmth; the Sea and Rivers, because they supply fish for food, or will drown one if he is not careful; the Earth, as the great provider of human wants.

It is not always recognized by anthropologists that Nature-worship in its primary stage is not the worship of a deity or spirit immanent in the material object, or of an anthropomorphic being separate from it but controlling its activities. This would involve a dichotomy of soul and body, mind and matter, which is foreign to the ideas of the primitive man or savage. It is not found in the lowest races, though no doubt, as readers of Tylor's *Primitive Culture* are aware, it plays an important part in the philosophy of tribes of no great enlightenment or cultivation. The earliest cult of all is of the material object itself (Comte's fetishism) considered as alive. The Sun, the Sea, the Mountain, as there is abundant evidence to show, is in this early stage *the* god. There is no suggestion of an indwelling spirit in Æschylus's invocation quoted above. The *θεὸς par excellence* of the Greek dramatists is simply the Sun. Horace's *Fons Bandusiæ* (*Carm.* III. xiii. 1), to which he promises the offering of a kid, is not a nymph of the well, but the water itself, as the epithet 'splendidior vitro' shows. Of course, nymphs, dryads, and fauns are plentiful enough in pagan myth. But this is a secondary development with which fetishism is not concerned. The two stages of belief, however, merge into one another.

The worship of Nature-deities is sometimes referred to the principle that primitive man, like the savage and the child, conceives of everything as animated by human feelings. This view requires some qualification. Strictly speaking, there is no such thing as a primitive man. Man, at any given period, has ancestors and a long history behind him. But, allowing the term as marking a stage of progress similar to that of the lowest savages of our own time, it will be plain, on reflexion, that the ordinary primitive man, like the lower classes everywhere, troubles himself little about the sentient aspect of the universe. To him, as to the lower animals, the animate is animate, and the inanimate inanimate. It is at all times only a few

of the more imaginative individuals of a race to whom their fellows are indebted for religious personification and myth. Religious progress is everywhere the work of the genius, not of the vulgar. Children are sometimes said to treat inanimate objects as alive. But this is exceptional, and usually stops short at make-believe. The child does not attempt to eat his own mud-pies. The boy knows quite well that his father's walking-stick is not a real horse, and, in spite of de Brosses, Schultze, and others, the girl does not really believe that her doll is a living being. A mother of the writer's acquaintance, having remonstrated with her little daughter for her rough treatment of 'poor dolly,' received the reply: 'Poor dolly! it is only a bag of sawdust.' Nor does even the primitive or savage genius discern life in all creation. He does so only in a desultory, fragmentary fashion, singling out such objects or phenomena as stir in him the feelings of gratitude, fear, or wonder. The worship of deified living men and of animals for their beneficent (as the cow) or formidable (as the tiger, crocodile, etc.) character, belongs to this class. But they are not usually called fetishes.

(2) CLASS II.—Some writers apply the term 'fetish' to a material object when worshipped, not for itself, but *as the representative or symbol of a Nature-deity or deified man.* Among the latter we may include the ancestor, though here a distinction is to be made between ancestor-worship proper in which the dead man is credited with imaginary powers, and the more rational honours paid to him by ourselves in common with more uncivilized nations. Fetishes of this class are sometimes a direct representation of the true object of worship, as in the case of the ancient Peruvians, who worshipped a golden disk for the Sun, and a silver one for the Moon. The selection of a snake or serpent in many countries as the representative of a river-god or of water is probably due to the direct resemblance of its sinuous, gliding motion to that of a stream. In other cases, the fetish was originally an offering to the god whom by a long association it had come to represent. Most of the *shintai* ('god-body') of Japan had this origin. The Sun-goddess is represented in the temple of Ise by a mirror offered to her, according to the myth, in order to induce her to leave the 'rock-cave of Heaven,' where she had hidden in disgust at the rude behaviour of her younger brother, the Rainstorm. When the Sun-goddess sent down her grandson to rule the world, she gave him this mirror, saying:

'My child, when thou lookest upon this mirror, let it be as if thou wert looking on me. Let it be with thee on thy couch and in thy hall, and let it be to thee a sacred mirror.' Another myth says: 'This is the Great God of Ise.'

We see here the transition from the offering to the symbol, and from the symbol to the actual deity. Of course, the last development is the work of the most ignorant and dull-minded worshipper. But it is not without parallel. The *inao* of the Ainus of Yezo (see art. AINUS, vol. i. p. 245 ff.), which consist of willow wands whittled into a mass of adherent shavings at one end, are properly mere offerings, but occasionally receive direct worship as 'genuine fetishes,' to use the expression of John Batchelor, a missionary who lived amongst them for many years. In Greece, as Lucian (*Imag.* 14) tells us, the visitors to the temple of Olympia believed that Phidias's statue was Jupiter in person. Plutarch and Seneca rebuked similar superstitious ideas about the gods. In West Africa, the dead ancestor is represented by his skull, or by a mass of chalk saturated with drippings from the putrefying head which is hung up over it.

'The conception,' says Tylor (*Prim. Cult.*[4] ii. 151), 'of such human relics becoming fetishes, inhabited or at least acted through by the souls which formerly belonged to them, will give a rational explanation of much relic-worship otherwise obscure.'

With the Damaras of South Africa, the ancestors are represented by stakes cut from trees or bushes consecrated to them, to which stakes the meat is first offered.

From fetishes of this second class the transition is easy to the idol. In Ancient Greece the primitive memorial erected to a god did not even pretend to be an image, but was often nothing more than a pillar, a board, a shapeless stone, or a post. At the present day in Korea we see these pillar-gods, consisting of upright logs of wood, which have so far approached becoming idols as to have their tops very rudely fashioned into human form. In the Indian Museum at Calcutta is a *liṅga* with a face carved on one side of the top—an incipient idol.

The totem, regarded as the animal, vegetable, or mineral which represents the personified national or tribal unity, belongs to this class of fetish (see TOTEMISM). In other cases, however, the animal may be worshipped as representing a Nature-deity, or as the incarnation of one. It is sometimes difficult to say to which of these categories the animal gods of ancient Egypt belonged.

(3) CLASS III.—In this class the fetish is a material object which is supposed to be *the permanent or temporary abode of a spirit*, and is worshipped or honoured accordingly. This is the most general use of the word, and is especially appropriate to the type of fetishism prevalent in West Africa, the chief home of this institution. It is the fetishism of Tylor and of Goblet d'Alviella, though the latter somewhat narrows its application by introducing the proviso that the spirit's services belong to the person who appropriates the fetish, as in the case of Aladdin and his lamp. Some of the spirits thus attached to material objects may be Nature-spirits, while others are the souls of dead men. In Japan, the spirit of a Nature-deity will descend into the sacred wand with paper scallops attached, which is called *gohei*, and answer questions by the mouth of the hypnotized medium who holds it in his hand. The soul of a dead Carib might be thought to abide in one of his bones, taken from the grave and carefully wrapped in cotton, in which state it could answer questions and even bewitch an enemy. But most fetishes of this class are tenanted by spirits of an indeterminate kind, no doubt originally suggested by the former two, but having lost all specific character. The objects selected by the West African negro to serve as the abode of his guardian spirit are such things as animals, snails, shells, tiger's teeth, antelope hoofs, monkey's paws, horns, snake-skins, bits of metal or ivory, teeth, bones, beads, stones, rags, etc. A much valued fetish, which was the subject of a lawsuit, consisted of a brass pan containing a lump of clay adorned with parrot's feathers. Another was a mixture of clay and various roots in an earthen pot. Many are compounds of a number of strange and disgusting things which remind us of the contents of the witches' cauldron in *Macbeth.* Some of these may have originally belonged to the second class of fetishes, and have been at first symbols rather than receptacles. A spirit may be lodged in the object selected as fetish by simple exposure in the open air, or by invitation. Frequently the intervention of a fetish-priest is necessary, with his ceremonial and hocus-pocus formula of consecration. Again, some chance circumstance may cause an otherwise indifferent object to be made a fetish.

A negro, hastening from his hut in order to escape from an enemy, knocked against a stone and hurt himself. He subsequently took up this stone and constituted it as his fetish. A Kāfir broke off a piece of the anchor of a stranded ship. As he died soon after, the people of the neighbourhood attributed his death to the power of the anchor, and honoured it accordingly.

A fetish is more fully trusted when experience has proved its value by success in trade, war, hunting, or fishing, or as a protection against disease and danger. The owner talks to it, asks its advice, lays his complaints before it, and calls upon it on every urgent occasion. It is rubbed with palm-oil, has palm-wine, beer, rum, or milk poured over it, and is sprinkled with blood of animals or even of man. To swear by the fetish is the most binding of oaths. On the other hand, if it fails, after warnings and reproaches, to perform what is expected of it, it may be punished, thrown away, buried, given away, or sold. Every fetish has its special province of efficiency. One prevents sickness, another heals it, others grant long life, children, wisdom, courage, safety in travelling or in war, protection against thunder, success in trade, fair winds, rain, etc. In short, they are supposed to procure every imaginable blessing and avert every conceivable misfortune. They are to be found everywhere—at the entrance to towns, in the huts and over the doors, by every road, at the foot of rocks and trees, or hung on men's necks. Some fetishes are private, belonging to individuals or families; others are public, and protect villages or tribes from misfortune by war or pestilence. The latter sometimes have priests and temples dedicated to them. The chief's house is the home of numerous fetishes; in fact, he himself may be a fetish endowed with supernatural power, such as that of making rain. The priests of the fetish-deity are naturally assimilated to him, and are credited with the possession of similar powers. In the case of the ordinary fetish, as well as of the idol, there are two currents of opinion. Many fetish-worshippers declare positively that, for example,

'the tree is not the fetish. The fetish is the invisible spirit which has taken up its abode in the tree. It cannot consume the offerings of food which are made to it, but it enjoys the spiritual part of them, and leaves the visible bodily element.'

On the other hand, there is undoubtedly a lower conception by which the material fetish itself is the object of worship, the spirit which inhabits it being forgotten or neglected. Tylor says that the negro usually combines the two as forming a whole, and this whole is (as the Europeans call it) the fetish, the object of his religious worship. Turner, in his *Nineteen Years in Polynesia*, 1861 (p. 527), says:

'On the isle of Nukunono Fakaafo worship used to be paid to the Tui Tokelau, or Lord of Tokelau; and this was a stone wrapped up in matting, and held so sacred that only the king durst view it, and even he only once a year, when it assumed a fresh suit of matting. As this stone was considered so sacred, it was natural for the people to identify it with the deity. Whatever offerings were made to the stone were made to the god; whatever petitions they had to address to the god were addressed to the stone. Which is here the god, the stone or the deity?'

As in the case of Class II., the transition of fetishes of Class III. to the idol is easy. A few dabs of paint or scratches with a knife are sufficient to convert a shapeless stone or post into an anthropomorphic figure. Idols are rare amongst most of the coast tribes of West Africa, but are common among all the interior tribes.

(4) CLASS IV.—The term 'fetish' is frequently used, though more in general literature than by scientific writers, of *non-religious magical appliances, charms, or amulets, which have a virtue quite independent of any gods or spirits.* Such are the piece of the rope with which a man has been hanged carried by the superstitious gambler, and the divining-rod used for the discovery of springs of water. To this class belong such fetishes as the kite's foot hung round the neck of a Basuto child, so that he may escape misfortune with the swiftness of the kite in its flight. Another child wears the claw of a lion, in order that his life may be as firmly secured against all danger as that of a lion. This class of so-called fetishes is dealt with more fully in art. MAGIC.

(5) CLASS V.—Material things are sometimes the objects of *a make-believe worship.* The Devonshire farmer, who at Christmas salutes his apple-trees with much ceremony, offering them a bowl of cider and a toast, does not think of them as tenanted by a tree-god. When a Japanese housewife gives her needle one day's rest in the year, and sets before it a tiny offering of cake, it is not necessary to suppose that the needle is taken for a sentient thing, or is believed to be the abode of a spirit. She does not call it *kami*, or 'god.' Both of these practices are due to the pleasure which men take in dramatic make-believe. The writer is not aware how far this applies to the annual honours paid in India by the artisan to his tools, which Herbert Spencer would include under the term 'fetishism.' Underlying all such cases there is, no doubt, a vague sense of gratitude, whether to the inventor or to Nature, which may eventually result in real worship. The kitchen-furnace in Japan is a recognized *kami*, or 'god,' and tree-worship had probably its origin in some such practices as that described above, which are known all over the world as well as in Devonshire.

The above classes of fetish often merge into one another in the most perplexing way. An object which by one person is worshipped for its intrinsic qualities (Class I.) may be regarded by another as the abode of a spirit (Class III.), or as a mere symbol (Class II.). Tylor (ii. 205) points out that 'the negro can say, "In this river, or tree, or amulet there is a wong [fetish-deity]." But he more usually says, "This river, or tree, or amulet is a wong."' Again, the same writer says (ii. 176): 'So close is the connexion conceived between spirit and image, that the idol is itself called "wong."' The medicine or magical appliance which in one case is purely non-religious may in others be fortified by a prayer or incantation. The practice of prefixing the sign of Jupiter to medical prescriptions is perhaps not wholly obsolete with ourselves. On the other hand, an ostensibly religious fetish may be found to owe its efficacy to some physical property of the material object in question.

3. Religious value of fetishism.—Fetishism is, no doubt, an undeveloped or a degraded form of religion; yet it rests on a principle which the higher religions are unable to dispense with altogether. In the nature of things, the spiritual must be represented by the physical. Christianity has its Cross, its Eucharist, its Baptismal water. Unfortunately, the evidence relating to fetish-worship, though plentiful enough, seldom enables us satisfactorily to trace the history of the ideas which underlie it. Missionaries are hampered by their religious prejudices; travellers seldom have the necessary previous training for that thorough knowledge of savage languages without which precision is impossible. Supposing that a Timbuctoo savant, visiting this country, saw an educated English gentleman prostrate himself before a wafer of bread, how wholly false and inadequate an impression he would receive of an institution whose history is traceable back for thousands of years through many varying forms of ritual and belief! Not that the traveller is much to blame. But, under the most favourable circumstances, it would be difficult to learn from the fetish-worshipper, or even from the priest, the reasons for practices which they pursue in imitation of their predecessors. They themselves, in fact, seldom know much about them. Yet all fetishes must have a history of some sort. It is not enough to say with de Brosses (*op. cit.* p. 182):

'On n'est pas obligé de rendre raison d'une chose où il n'y en a point; et ce seroit, je pense, assez inutilement qu'on en cher-

cheroit d'autre que la crainte et la folie dont l'esprit humain est susceptible, et que la facilité qu'il a dans de telles dispositions à enfanter des superstitions de toute espèce. Le Fétichisme est du genre de ces choses si absurdes qu'on peut dire qu'elles ne laissent prise au raisonnement qui voudroit les combattre.'

Fear and folly do, no doubt, play a great part, but Herbert Spencer is nearer the truth when he says (*Study of Sociology*[9], 1880, p. 305): 'The wrong beliefs are superficial, and there is a right belief hidden by them.' There would be no spurious coins if there were not a genuine gold or silver currency. We are sometimes able to catch a glimpse of a striving after, or a lapse from, something higher, associated with what might at first sight appear a gross form of fetishistic superstition.

In 644 a prophet arose in Eastern Japan who persuaded his neighbours to worship a grass-green caterpillar with black spots, promising them that, if they did so, they would enjoy long life and riches. The movement spread so far and so rapidly that the authorities intervened; the prophet was executed, and his religion suppressed. This might seem pure fetishism of a low type. Yet, when we are told that the god was called the God of the Eternal World and the God of Gods, it seems probable that the caterpillar was merely a symbol, and that the movement, recorded by no friendly observer, was, in reality, a protest against the prevailing polytheism of the time. The circumstance that the devotees of the new god threw their property into the highways indicates a degree of religious exaltation hardly to be produced by the mere worship of a caterpillar. Pausanias informs us (ix. 40) that in his time the Greeks worshipped the sword of Agamemnon. Surely it was not simply a bit of metal to which they paid their devotions. Its association with the heroic virtues of the men of the Homeric age must have counted for much in the motives for their reverence. The material object worshipped at the shrine of Ise in Japan is a metal mirror enclosed in a box, and never seen by anybody. Doubtless, some dull-witted devotees take this fetish (Class II.) for the actual deity; others know that, historically, it represents the Sun or, rather, the Sun-goddess; but the majority have reached the higher, though less correct, conception of the god as a great Divine ancestor, who from heaven exercises a providential guardianship over Japan. The animal-worship of the Ancient Egyptians was something more than the mere adoration of bulls and cats.

Fetishism—taking the word in its most comprehensive signification—rests on two principles. The first is what, in modern phrase, we call the immanence of Deity; the second is the necessity which there is for the spiritual to be expressed in terms of the physical. But the savage's conceptions of them are crude and inadequate, and his unintelligent application of them has resulted in a profuse outgrowth of gross superstition.

LITERATURE.—C. de Brosses, *Du Culte des dieux fétiches*, Paris, 1760; Auguste Comte, *Philosophie positive*, do. 1830–42 (tr. H. Martineau, 1896); E. B. Tylor, *Primitive Culture*[4], London, 1903; Goblet d'Alviella, *Hibbert Lectures*, London, 1891; Herbert Spencer, *Sociology*, do. 1874; A. C. Haddon, *Magic and Fetishism*, London, 1906 (contains a useful bibliography); F. Schultze, *Fetichism* (Eng. tr. 1885); R. H. Nassau, *Fetichism in West Africa*, London, 1904; M. H. Kingsley, *West African Studies*, London, 1899; J. G. Frazer, *Golden Bough*[2], London, 1900; W. Schneider, *Rel. der afr. Naturvölker*, Münster, 1891 (a most admirable work, with numerous references to authorities). Mention should also be made of Max Müller, Hartland, Clodd, Réville, Casalis, Brinton, Lang, Ellis, Bastian, Waitz, and Holub, who, as travellers or students, have helped to elucidate this subject. Those who have practical opportunities of investigating fetishism will find *Notes and Queries on Anthropology*, issued by the Royal Anthropological Institute, a useful manual.

W. G. ASTON.

FETISHISM (American).—Among the native tribes of the two Americas, fetishism is rife. They regard the fetish as intrinsically possessing that magic power known to some of the N. Amer. Indians as *orenda*, the essential essence which enables the object to achieve supernatural results. But the ability to perform these, and the sphere of action of the fetish, depend greatly upon the nature of the object containing the magic power. The possession of a fetish presumes possession of its magical properties.

It must be borne in mind that to the untutored Indian intelligence all things—animals, water, the earth, trees, stones, the heavenly bodies, even night and day, and such properties as light and darkness—are regarded as possessing animation and the power of volition. It is, however, the general Indian belief that many of these are under the power of some spell or potent enchantment. The rocks and trees are the living tombs of imprisoned spirits, resembling the Dryads of folklore, so that it is not at all strange to the Indian mind to perceive an imprisoned intelligence, more or less powerful, in any object, no matter how uncommon the vehicle—indeed, the more uncommon, the more probable it would appear as the place of detention of some powerful intelligence imprisoned therein, for revenge or some similar motive, by the spell of some mighty enchanter.

Nearly all the belongings of a shaman or medicine-man are classed as fetishes by the N. Amer. Indians. These usually consist of the skins of beasts, birds, and serpents; roots, bark, powders, and numberless other objects. But the fetish must be altogether divorced from the idea of religion proper, with which it has little or no connexion, being found side by side with religious phases of many types.

The fetish may be a bone, a feather, an arrow-head, a stick carved or painted, a fossil, a tuft of hair, a necklace of fingers, a stuffed skin, the hand of an enemy, or anything which might be suggested to the original maker in a dream or a flight of imagination. It is sometimes fastened to the scalp-lock, the dress, the bridle, concealed between the layers of a shield, or specially deposited in a shrine in the wigwam. The idea in the mind of the original maker is usually symbolic, and is revealed only to one formally chosen as heir to the magical possession and pledged in his turn to a similar secrecy.

Notwithstanding that it has been stated that the cult of fetishism is not, strictly speaking, a department of religious activity, a point exists at which the fetish begins to evolve into the god. This happens when fetishes survive the test of experience, and achieve a more than personal or tribal popularity, as among the Zuñi Indians, examples of which will be adduced in the course of the article. Nevertheless, the fetish partakes more of the nature of those spirits which are subservient to man (as, for example, the Arabian *jinn*) than of gods proper; and, if they are prayed and sacrificed to on occasion, the 'prayers' are more of the nature of a magical invocation, and the 'sacrifices' no more than would be accorded to any other assisting agent. Thus sharply must we differentiate between a fetish, or captive spirit, and a god. But it must further be borne in mind that a fetish is not necessarily a piece of personal property. It may belong collectively to an entire community, and, as will be remarked later, it is not necessarily a small article, but may possess all the appearance of a full-blown idol. An idol, however, is the abode of a god—the image into which a deity may materialize. A fetish, on the other hand, is the place of imprisonment of a subservient spirit which cannot escape, and which, if it would gain the rank of godhead, must do so by a long series of luck-bringing, or, at least, by the performance of a number of marvels of a protective or fortune-making nature.

It is not unlikely that a belief exists in the Indian mind that there are many wandering spirits who, in return for food and other comforts, are willing to materialize in the shape that the savage provides for them, and to assist him in the chase and other spheres of life.

1. The Eskimos.—Among the Eskimos, fetishism presents itself in an almost perfect form, and with them is found one of the few instances of making a fetish of the human body. Nelson (*18 RBEW*, 1899, pt. 1, p. 429) states that along the coast of Norton Sound and the Lower Yukon a new-born child is sometimes put to death for the purpose

of having the services of its shade to secure success in hunting. The child must be killed secretly, and its body stolen, so that no one may know of the occurrence. The body is then dried, placed in a bag, and worn on the person or carried in the *kayak* at sea. By carrying the body the hunter believes that he compels its shade, which is clairvoyant, to assist in finding game, and so to direct the flight of his spear that the animals he hunts cannot escape. The Eskimos also employ masks to assist them in the chase. These are carved to represent supernatural beings, the *tunghät*, or wandering genii, and are believed to possess the qualities of the animals they depict, the spiritual essence of which enters into the wearers. They are supposed to watch for game, and, by some clairvoyant power, to see it at a great distance; and the hunter is then guided by the influence of the masks to find it. They are also supposed to guide the spears in flight. Among the people of the Kaviak Peninsula and Kotzebue Sound, the possession of the dried body of a weasel, worn in a pouch or belt, is supposed to endow the owner with agility and prowess as a hunter. In all cases it follows that the owner of any mummified animal carries with it power over its shade, which becomes the servant of the possessor.

The Eskimos naturally attach great importance to those fetishes which they believe bring them success in whale-hunting. To this end they employ images of fabulous and other animals. These are of practically the same class as the mask fetishes alluded to above. A whaling *umiak* always carries a number of fetishes, such as a wolf's skull, a dried raven, the axis vertebra of a seal, feathers, the skin of a golden eagle, or the tip of a red fox's tail. Little stone and crystal images of whales are also worn. The Unalit of Bering Strait believe that their arrows and other weapons, when marked with the sign of the wolf or other totem, become invested with some of the qualities of the animal represented, and are endowed with some special fatality. The women of the wolf *gens* braid strips of wolf-skin in their hair, and boys wear a wolf's tail behind in their belts. In these customs we may trace a curious blending of fetishism and totemism, in the use of the totem animal or its parts as fetishes or amulets.

After an animal is killed, the hunter carefully removes and preserves the bladder. These bladders are used in the 'Bladder Festival,' a feast to the dead, and are supposed to contain the shades of the slain animals. When—in some ceremonies—the bladders are burst in the water, it is believed that they release the imprisoned shade, and that it swims out to sea and enters the body of an unborn animal of its own species. If the shade is well pleased with the treatment given it by the hunter, they say it will not be afraid to meet him in its new form, and will permit him to approach and kill it again without trouble. On the Alaskan mainland, the shamans place a small ivory carving of a whale in a male child's mouth directly after birth, so as to feed him upon something that will make him grow up a fine hunter. It is believed that a pair of gloves having the feet of a sea-parrot sewn to them will bring success in salmon-fishing, as the bird is a clever fisher—an instance of what might be called 'sympathetic' fetishism.

What would seem to be a species of ancestor-worship mingles with the fetishism of the Hudson Bay Eskimos, according to Turner (*11 RBEW*, 1894, p. 201), for he states that certain fetishes are worn 'as remembrances of deceased relatives. These have the form of a headless doll depending from some portion of the garment worn on the upper part of the body,' and, of course, are fetishes into which they hope the spirit of the ancestor may be coaxed to reside, so that by means of its clairvoyant gift it will be of great assistance to the wearer.

Besides those enumerated above, the Eskimos possess many other varieties of fetish. Frequently a shaman is employed to coax a wandering spirit into a fetish body, and it is interesting to note that Nelson (*op. cit.* 434) states that 'an heirloom (*paituk*) may become a fetich by reason of its extreme age and long possession in one family. Such objects are treasured, and are handed down from father to son. They are supposed to be endowed with reason and to be gifted with supernatural powers to aid and protect their owners.'

Eskimo women wear belts made of the incisors of reindeer, taken out with a small fragment of the alveolus adhering to them, and attached scale-like to a rawhide strap. When one of these has been in the family for a long time, it is believed to acquire a certain virtue for curing disease: the affected part must be struck smartly a number of times with the end of the belt. A married woman who desires a son procures a small doll-like image from a shaman, who, after performing certain secret rites over it, advises her to sleep with it under her pillow.

When selling skins they cut off a small fragment, and place it in a pouch; or, if selling an entire seal, they cut off and swallow the tip of its tongue in order to retain the essential essence or spirit of the animal. In several of their folk-tales it is mentioned that certain persons took small pieces from skins, and that afterwards these again became full-sized skins, to the benefit of the owner, thus indicating the meaning of this custom. They place implicit faith in such fetishes, which they believe to have been in contact with supernatural beings and objects which by their general appearance recall the effect expected from the fetish—a well-known phase of sympathetic magic. Other fetishistic objects enumerated by Murdoch ('Point Barrow Expedition,' *9 RBEW*, 1892, pp. 436–441) are bunches of the claws of the bear or wolverine, the metacarpal bones of the wolf, the head or beak of the gull or raven, a small dried flounder, the young unbranched antler of a reindeer, the last three joints of a reindeer fawn's foot, the sub-fossil incisor tooth of some ruminant, the tusk of a young walrus, and the stuffed skin of a black-bellied plover. A charm of great value to the mother who has a young babe is the canine tooth of a polar bear, as she is under the impression that, while she wears it, her milk supply cannot fail.

An instance of tribal fetishism is noticeable in the *Ai-yá-g'úk*, or 'Asking festival,' when a wand known by the same name is made, having three hollow globe-like attachments hanging to it. It is used by a man, chosen for the purpose, to obtain the wishes of all the various members of the tribe, who in turn ask for something which he obtains for them from the other members. This wand is much respected, and it is considered wrong to refuse any request made with it. In some parts of the Lower Yukon, instead of stating their wishes, they make small images and hang them on to the wand held by the man, who conveys it from one to another.

2. Athapascan family.—The Apaches, both male and female, wear fetishes which they call *tzi-daltai*, manufactured from lightning-riven wood, generally pine or cedar or fir from the mountains (Bourke, *9 RBEW*, p. 587). These are highly valued, and are never sold. They are shaven very thin, rudely carved in the semblance of the human form, and decorated with incised lines, representing the lightning. They are small in size, and few of them are painted.

Bourke describes one which an Apache chief carried about with him, made of a piece of lath, unpainted, having drawn upon it a figure in yellow with a narrow black band, and three snake-heads with white eyes. It was further decorated with pearl buttons and small eagle-down feathers. The reverse and obverse were identical.

Many of the Apaches fixed a small piece of malachite to their guns and bows to make them shoot accurately. Bourke (*op. cit.*) mentions a class of fetish which he terms 'phylacteries.' These are pieces of buckskin, or other material, upon which are inscribed certain characters or symbols of a religious or 'medicine' nature, and they are worn attached to the person seeking to be benefited. They differ from the ordinary fetish in that they are concealed from the public gaze.

Such a phylactery, says Bourke, 'itself "medicine," may be employed to enwrap other "medicine" and thus augment its own potentiality' (*op. cit.* 591). He describes several of those objects. One worn by an Indian named Ta-ul-tzu-je 'was tightly rolled in at least half a mile of . . . saddlers' silk,' and when brought to light was found to consist of a small piece of buckskin two inches square, upon which were drawn red and yellow crooked lines which represented the red and yellow snake. Inside were a piece of malachite, a small cross of lightning-riven pine, and two very small perforated shells. The cross they designated 'the black wind.' Another 'phylactery' consisted of a tiny bag of hoddentin (on which see *ERE* i. 602b), holding a small quartz crystal and four feathers of eagle-down. This phylactery, it was explained, contained not merely the 'medicine' of the crystal and the eagle, but also that of the black bear, the white bear, the yellow bear, and the yellow snake.

3. Iroquoian family.—Most things that seem at all unnatural are accepted by the Hurons as *oky*, or supernatural, and therefore it is accounted lucky to find them. In hunting, if they find a stone or other object in the entrails of an animal, they at once make a fetish of it. Any object of a peculiar shape they treasure, for the same reason. They greatly fear that demons or wicked spirits will purloin these fetishes, which they esteem so highly as to propitiate them in feasts and invoke them in song. The highest type of fetish obtainable by a Huron was a piece of the *onniont*, or great armoured serpent, a mythical animal revered by many N. Amer. tribes. The medicinal virtue of some fetishes is regarded as very great, one old woman of the Lower Canada Hurons preserving the mummied embryo of a deer, which, she said, the *manitou* had given her during a severe illness of which it had cured her.

4. Algonquian family.—Hoffman states ('The Menomini Indians,' *14 RBEW*, 1896, pt. 1, p. 74) that at the medicine lodges of the tribe there are preserved fetishes or 'amulets, worn above the elbows, which consist of strands of beaded work, metal bands or skunk skins, while bracelets of shells, buckskin, or metal also are worn.' A great tribal fetish of the Cheyenne was their medicine arrow, which was taken from them by the Pawnees in battle. The head of this arrow projects from the bag which contains it, and is covered with delicate waved or spiral lines which denote its sacred character. It was, indeed, the palladium of the tribe. A peculiar type of fetish consisted of a mantle made from the skin of a deer, and covered with feathers mixed with beadings. It was made and used by them as a mantle of invisibility, or charmed covering, to enable spies to traverse an enemy's country with impunity. In this instance the fetishistic power depended upon the devices drawn.

5. Siouan family.—The principal fetishes among the Hidatsa tribe of the Sioux are the skins of foxes and wolves, the favourite war-fetish being the strip off the back of a wolf-skin, with the tail hanging down the shoulders. They make a slit in the skin, through which the warrior puts his head, so that the skin of the wolf's head hangs down upon his breast. These, of course, are totemic fetishes. The most common tribal fetishes with the Siouan tribes are (or were) buffalo heads, the neck-bones of which they preserve with a view to preventing the buffalo herds from removing to too great a distance from them. At certain periods they perform a ceremony with these bones, which consists in taking a potsherd with live coals, throwing sweet-smelling grease upon it, and fumigating the bones with the smoke. There are certain trees and stones which are regarded as fetishes; beside them the Siouans make offerings of red cloth, red paint, and other articles. But all have their personal fetishes, and in all hunting and warlike excursions the 'medicine,' or fetish, is carried. It usually consists of a head, claws, stuffed skin, or other representative of the fetish animal. Even their horses are provided with fetishes in the shape of a deer's horn, to ensure their swiftness. The rodent teeth of the beaver are regarded as potent charms, and are worn by little girls on their necks to make them industrious.

6. Shoshonean stock.—At Sikyatki in Arizona, a territorial nucleus of the Hopi, Fewkes (*17 RBEW*, pt. 2, p. 729 f.) had opportunities of inspecting many interesting fetish forms. A number of these discovered in native graves were pebbles of botryoidal shape, with a polished surface, or with a fancied resemblance to some animal or other form.

A good example of a fetish which has almost attained godhead is that at the Antelope rock at Walpi, 'around which the Snake dancers biennially carry reptiles in their mouths. There is in one side a niche in which is placed a much larger mass of that material [hematite], to which prayers are addressed on certain ceremonial occasions, and upon which sacred meal and prayer emblems are placed.'

Many of the personal fetishes of this people consist of cephalopod fossils, some of which are wrapped up in sacred bundles which are highly venerated, the latter, of course, being tribal fetishes.

In one grave was found a single large fetish of a mountain lion, made of sandstone, in which legs, ears, tail, and eyes are represented, the mouth still retaining the red pigment with which it was coloured. It is almost identical with those used by the Hopi at the present day.

7. Zuñi family.—Cushing (*2 RBEW*, 1883) seems to think that fetishism among the Zuñis arose from the supposition they entertained that they were kin with animals, or, in other words, that their fetishes were totemistic. It is in this stage that totemism and fetishism meet, and the two are by no means incompatible, though they very often flourish side by side. Fetishism of this description is, indeed, the natural concomitant of a totemistic system. Zuñi fetish objects are usually natural concretions, or objects in which a natural resemblance to animals has been heightened by artificial means. Ancient fetishes are much valued by the Zuñis, and are often found by them in the vicinity of pueblos inhabited by their ancestors, and as tribal possessions are handed down from one generation to another. The shamans believe them to be the actual petrifactions of the animals they represent. The Zuñi philosophy of the fetish is given in the Tale of the Two Sun Children, instanced by Cushing (*op. cit.* 14 f.):

'Now that the surface of the earth was hardened, even the animals of prey, powerful and like the fathers (gods) themselves, would have devoured the children of men; and the Two thought it was not well that they should all be permitted to live, "for," said they, "alike will the children of men and the children of the animals of prey multiply themselves. The animals of prey are provided with talons and teeth; men are but poor, the finished beings of earth, therefore the weaker."

Whenever they came across the pathway of one of these animals, were he great mountain lion or but a mere mole, they struck him with the fire of lightning which they carried in their magic shield. *Thlu!* and instantly he was shrivelled and burnt into stone.

Then said they to the animals that they had thus changed to stone, "That ye may not be evil unto men, but that ye may be a great good unto them, have we changed you into rock everlasting. By the magic breath of prey, by the heart that shall endure forever within you, shall ye be made to serve instead of to devour mankind."

Thus was the surface of the earth hardened and scorched and many of all kinds of beings changed to stone. Thus, too, it happens that we find, here and there throughout the world, their forms, sometimes large like the beings themselves, sometimes shrivelled and distorted. And we often see among the

rocks the forms of many beings that live no longer, which shows us that all was different in the "days of the new."

Of these petrifactions, which are, of course, mere concretions or strangely eroded rock-forms, the Zuñis say, "Whomsoever of us may be met with the light of such great good fortune may *see* (discover, find) them and should treasure them for the sake of the sacred (magic) power which was given them in the days of the new."'

This tradition furnishes additional evidence relative to the preceding statements, and shows the motive wherein lies the power of fetishes. It is supposed that the hearts of the great animals of prey are infused with a spirit or 'medicine' of magic influence over the hearts of the animals they prey upon, and that they overcome them with their breath, piercing their hearts and quite numbing them. Moreover, their roar is fatal to the senses of the lower beasts. The mountain lion absorbs the blood of the game animals; therefore he possesses their acute senses. Again, those powers, as derived from his heart, are preserved in his fetish, since his heart still lives, even although his body be changed to stone. It happens, therefore, that the use of these fetishes is chiefly connected with the chase. But there are exceptions. The great animals of the chase, although fetishistic, are also regarded as supernatural beings, whose mythological position is absolutely defined.

In the City of the Mists lives Po-shai-an-k'ia, father of the Medicine societies, a culture-hero deity, whose abode is guarded by six beings known as the 'prey-gods,' and it is their counterfeit presentments that are used as fetishes. To the north of the City of the Mists dwells the Mountain Lion prey-god; to the west, the Bear; to the south, the Badger; to the east, the Wolf; above, the Eagle; below, the Mole. These animals possess not only the guardianship of the six regions, but also the mastership, not merely geographic, but of the medicine powers which emanate from them. They are the mediators between Po-shai-an-k'ia and man. The prey-gods, as 'Makers of the Paths of Life,' are given high rank among the gods, but, notwithstanding this, their fetishes are 'held as in captivity' by the priests of the various medicine orders, and greatly venerated by them as mediators between themselves and the animals they represent. In this character they are exhorted with elaborate prayers, rituals, and ceremonials, and sometimes placated with sacrifices. Of the prey-gods of the hunt (*we-ma-â-hâ-i*) the special priests are the members of the Great Coyote People, the chosen members of the Eagle and Coyote *gentes*, and of the Prey Brother priesthood. These prey-gods appear to be almost unique, and may be indicated as an instance where fetishism has become allied with religious belief. They depict, with two exceptions, the same species of prey-animals as those supposed to guard the six regions, the exceptions being the Coyote and the Wild Cat. Each one of the six species of prey-animals is subdivided into six varieties. They are, strictly speaking, the property of the priests, and members and priests of the sacred societies are required to deposit their fetishes, when not in use, with the Keeper of the Medicine of the Deer. These 'medicines,' or memberships, alone can perfect the shape of the fetishes and worship them.

The 'Day of the Council of the Fetishes' takes place a little before or after the winter solstice or national New Year. The fetishes are taken from their place of deposit, and arranged according to species and colour, in front of a symbolic slat altar, quadrupeds being placed upright, and birds suspended from the rafters. The fetishes are prayed to, and prayer-meal is scattered over them. Chants are intoned, and a dance performed in which the cries of the fetish beasts are imitated. A prayer with responses follows. Finally, all assemble round the altar, and repeat the great invocation.

The use of the fetishes in hunting among the Zuñi is extremely curious and involved.

The hunter goes to the House of the Deer Medicine, where the vessel containing the fetishes is brought out and placed before him. He sprinkles sacred meal over the vessel in the direction he intends to hunt, chooses a fetish from it, and presses it to his lips with an inhalation. He then places the fetish in a buckskin bag over his heart. Proceeding to the hunt, he deposits a spider-knot of yucca leaves where an animal has rested, imitates its cry, and is thus supposed to confine it within a narrow circle. He then breathes deeply from the nostrils of the fetish, as though inhaling the magic breath of the God of Prey, and puffs the breath long and loudly in the direction whither the beast's tracks tend, in the belief that the breath he has borrowed from the prey-god will stiffen the limbs of the animal he hunts. When the beast is caught and killed, he inhales its suspiring breath. Then he again breathes into the nostrils of the fetish. He then dips the fetish in the heart's blood of the slain quarry, sips the blood himself, and devours a part of the liver. The fetish is placed in the sun to dry, and replaced in the buckskin pouch with a blessing, afterwards being duly returned to the Keeper of the Deer Medicine.

The Zuñi priesthood of the Bow has three fetishes—the Mountain Lion, the White Bear, and the Knife-feathered Monster. The last is probably a tutelar deity, and was perhaps the Zuñi god of war—an instance of the reversion of a full-fledged deity to the status of a fetish, probably occasioned by the popularity and wide-spread nature of fetishism among this people. They have also an equine fetish borrowed from the Navahos, and known as 'The Pony'; and from the same people they have adopted a sheep fetish, the purpose of which is to ensure fecundity.

8. Mexico and Central America.—Although traces of fetishistic belief undoubtedly make their appearance in the religious systems of both Mexico and the ancient civilizations of Central America, concrete examples of them are rare, owing to the fact that these religions had reached a stage far beyond the fetishistic radius. Nevertheless we cannot point to any particular reaction against fetishism, as we can in the case of Peru in the reign of Manco Ccapac, unless it be the alleged policy of Nezahualcoyotl towards the elimination of the swarming deities of the Mexican provinces, many of which probably were merely overgrown fetishes. But the heresies of the Tlatoani of Tezcuco are possibly fabulous.

The only Mexican idol now in existence was most probably of fetishistic origin. This is the uncouth basalt figure of the so-called Teoyaominqui—in reality Centeotl—the 'Corn-mother.' The image shows signs of having been evolved, in its design, from the bundles of maize carried on the backs of women at her festival, and provided with a face back and front. This figure appears to reproduce the primitive fetish which it superseded, and we seem to have confirmation here of the process noted among the Zuñi Indians. The first missionary of Achiotlan, Fray Benito, cited by Burgoa (*Hist. de la Prov. de Predicatores de Guascaca*, Mexico, 1674, ch. xxviii.), destroyed at Mictlan, or Yoopaa, an 'idol' cut from an emerald of great value, of the size of a thick capsicum pod, on which was skilfully engraved a small bird and a serpent coiled ready to strike. This the present writer suspected to be a fetish, and he was glad to see that Eduard Seler confirmed his suspicions in his 'Deities and Relig. Conceptions of the Zapotecs,'[1] and further identified it, from the hieroglyphs on its surface, with the Mexican god Quetzalcoatl, or 'Feathered Serpent.' But the latter circumstance would seem to make it an amulet bearing the god's name, and not a fetish.[2] There are, however, instances where amulets, especially jewels of great value, have been worshipped owing to their connexion with some great deity, as among the Hindus, and this may be a case in point.

The *tepitoton*, or small household idols of Mexico, were perhaps of fetishistic origin. We know very little about them save that they were broken by the people at the end of every 'sheaf' of fifty-two years, when it was considered that the world might possibly come to an end. The ceremony then held was for the purpose of renewing the sacred fire throughout Mexico, and, if these small figures

[1] *28 Bull. BE*, 1904, p. 284 ff.; cf. p. 668.

[2] Dorsey ('Siouan Cults,' *11 RBEW*, 1894) calls the amulet 'a personal fetish.' It does not appear to the present writer to be so. An amulet is considered to be *directly symbolic* of a deity, power, faith, or idea; a fetish is rarely symbolic, but is merely an acceptable or suitable (or temptingly grotesque [?]) abode for a spirit, imprisoned therein voluntarily or otherwise. It might, however, be brought against this view that symbols are fetishistic, inasmuch as the wearers believe them to be imbued or surcharged with the spirit or essence of the deity, power, faith, or idea they typify.

represented 'hearth and home,' as in some aspects did the Roman *lares* and *penates*, they would hardly have been destroyed. It is more probable that they were fetishistic, like the household *huacas* of Peru.

Here it may be proper to mention some instances, in a religion so advanced as was that of the Mexicans, of the survival of strictly fetishistic ideas. These are found in close connexion with the corn- and rain-spirit worship. Fetishism has an intimate association with early agriculture. The spirits imprisoned or dwelling voluntarily in the fetishes which protect the fields assist the growth of the crops, and subseqnently develop into 'food-gods.' But their natural forces become abated by reason of striving after too much fertility of soil, and they require a rest. Such a rest the Mexicans gave to their rain- and maize-gods every eight years, at the festival of the *Atamalqualiztli*, or 'feast of porridge-balls and water,' when the usual staples of existence were for a space abandoned by the people, so that the productive gods might have repose.

9. California. — Some interesting phases are noticeable among the Seri Indians of the Californian Gulf. McGee (*17 RBEW*, 1898, pt. 1, p. 185*) instances among them the use of pottery fetishes or small figurines used in the manufacture of fictile ware, to ensure that the vessels being fired will not crack. The fetish is moulded at the same time and from the same material as the vessel, and then fired with it 'theoretically as an invocation against cracking or other injury, but practically as a "draw-piece" for testing the progress of the firing.'

In their observances prior to warfare the Seri make use of many fetishistic objects, and in battle strive to obtain those of the enemy, which they treasure as fetishes. Their hereditary enemies, the Papago, reciprocate these customs, a case occurring where an aged warrior long wore an Apache arrow-point as a protective against Apache arrows. A Papago shaman also wore a Seri arrow-head for a similar purpose. The Seri are never without imitations of what they believe to be the fetishes of an enemy.

McGee (*op. cit.* p. 259* f.) says that 'the day before the 1895 expedition entered their stronghold, a band of warriors and women were frightened from a freshly slaughtered cow by a party of *vaqueros* so suddenly that their arms were left behind —and these included a heavy Springfield "remodelled" rifle, lacking not only ammunition but breechblock and firing-pin; while Don Andrés Noriega, of Costa Rica, and L. K. Thompson, of Hermosillo, described a rifle of modern make captured similarly two years before, which was in good working order and charged with a counterfeit cartridge ingeniously fashioned from raw buckskin in imitation of a centre-fire brass shell and loaded with a polished stone bullet.' These weapons are, of course, regarded as symbols of mystical potencies, as were several pseudo-machetes made from rust-pitted cask hoops. Another mock machete was actually carved from palohlanco wood and 'coloured in imitation of iron blade and mahogany handle by means of face-paints, and even furnished with "eyes" replacing the handle-rivets, in the form of embedded iron scales.'

The chief use of the weapons of the whites by the Seri is shamanistic and symbolic. As regards their own weapons, the rude appearance and rarity of their stone arrow-heads would seem to point to their being originally manufactured in fetishistic mimicry of alien devices, and it is notable that they are still made only by the shamans of the tribe. Most of the Seri shields or bucklers are fetishistic, as is proved by the circumstance that they are usually made from pelican or other skins much too thin to turn aside a blow, their magical properties being considered sufficient to deflect an enemy's strokes.

10. Peru.—Garcilasso el Inca de la Vega states[1] that in the earliest times in Peru each district, each nation, each family, each row of houses, even each dwelling, had its own god, each different from those of all others, such as herbs, plants, flowers, stones, pebbles, pieces of jade and jasper. That many of these were fetishes cannot be doubted. He also mentions that many of these lesser deities were animals, which would seem to imply a totemic system. But animals are used as fetishes as well as totems, as in Dahomey[1] and on the Slave Coast.[2] In Peru the population was divided into tribes, or *ayllus*, supposed to be consanguineous, each of which had its own *paccarisca*, or place of origin—usually a fabulous one—which was generally a group of rocks rendered conspicuous by their shape and isolation. These were often treated as fetishistic, and were regarded, in some instances, as the abodes of spirits imprisoned by the gods, or else as folk who had been turned into stone by the same agency. Such stones or monoliths were to be seen at Tiahuanaco, Pucara, Xauxa, Pachacamac, and Caxamarca.

But, most important perhaps of all fetishistic examples to be found on the American hemisphere were the *huacas*. The word now signifies 'treasure-house,' or 'ruins of a treasure-house.' In Incan times it implied that the object was one to which worship should be given, and it denoted objects of worship of all descriptions. We have to do for the most part with portable *huacas*, although some immovable ones were fetishes, such as those mentioned at Tiahnanaca and elsewhere. These portable *huacas* included the *conopas*, which were in reality household gods, and as such are of no more interest here than are the *huacanqui*, or amulets proper. Many of the movable *huacas* were stones or pebbles of unusual shape or colour, unshaped by hand; but often they were carved to resemble fruits, animals, or persons.

One of the most important of the fetishistic *huacas* was the *ccompa* which guarded the irrigation channels from leakage and destruction. Other fetishes, called *chichic* or *huanca*, were set up at the boundaries of the fields. They represented a gigantic stalk of maize, carved in stone, and their supposed office was to induce the maize-spirit to make the plant grow to the greatest possible size. A form of fetishism which marks the transition between primitive agricultural fetishes and deities was that of the 'mother' spirits whose function it was to cause the various plants to take root and grow. Such are the *acsumama*, or potato-mother; the *quinuamama*, or quinua-mother; and the *saramama*, or maize-mother. These were usually embodied in hard stones, laboriously wrought into the shape of the ear of maize and the other plants of which they were the guardians. Abnormal plants themselves were occasionally used as fetishes, as, for example, when the rows of grains were twisted spirally round the core of the ear, instead of being straight. Such a plant, or *pirlina-sara*, was placed as a protective fetish on the top of the *pirlina*, or corn-crib, where the maize was stored. The *saramama* was also placed in one of the *pirlinas*. It was made of the finest new maize-stalks, and was richly clothed. On being asked by a spirit-interpreter whether it could live until next year, if it replied in the affirmative, it remained until the following harvest; but, if it announced its inability to survive until that period, it was burnt, and another figure was substituted for it.

There is evidence that fetishism in Peru lingered until long after the destruction of the national mythology. Bollaert states[3] that in the Pass or Abra of Pichuta he noticed a pile of stones with

quids of coca on it. The stones, called *apachitos*, according to the *Mercurio Peruyano* for 1794, 'were adored as deities.' They are found in all the mountain passes, and doubtless originated in Incan times, when those who were laden with baggage, when they had to face a dangerous track, laid down their load, and as a sign of gratitude offered the first thing they could find or lay hands on to the local spirit, saying '*Apachecha*,' which means 'to him who has given me strength.'

11. Brazil.—'Idols,' says Prince Maximilian in his *Travels in the Brazils* (London, 1820, p. 67), 'are nowhere seen among the Tapuyas, and it is only on the River Amazon that certain images have been found which seem to have a connection with the religious creed of the inhabitants.' This would seem to be borne out by the evidence of Christoval de Acuña,[1] who says that the Amazon River tribes had gods who rendered them active assistance in hunting, fishing, and war. On an expedition of war one of the war-gods was placed in the prow of the boat; on a fishing expedition this place was occupied by a 'god' holding a fish. When not in use these fetishes were kept in baskets; and, should the expedition prove unsuccessful, the images were thrown aside, and replaced by others. Thus we learn how the savage carefully experiments with a chosen spirit before he raises it to the level of a god.

The Uapes River tribes possess 'divine stones' of quartz, jasper, or jade, to the piercing of which they devote several years of labour. On the Upper Jamunda is to be found a lake formerly consecrated to the 'Mother Moon,' into which the fabled Amazons threw their *muirákitim*, or sacred stones, representing animals, fishes, and other symbolic objects. The Ipurinas make fetishes of the bones of their ancestors, as do other S. Amer. tribes, and the ancient Caribs were punctilious in preserving the bones of their forefathers, which, after they had been cleaned, bleached, and painted, they kept in a wicker basket full of spices suspended from the doors of their dwellings.

12. Colombia. — The ancient semi-civilized Muysca-Chibcha race, who inhabited a portion of this Republic, manufactured many fetish-like articles of gold, both in the shape of human beings and in that of frogs and fantastic animals. These they deposited in the tombs of their dead, and in their dwellings. The Goajiras, who inhabit the Colombian peninsula of the same name, keep a number of large golden 'dolls,' called *guaras*, which are veritable fetishes, and are supposed to bring good luck to all who see them. But in order to see them an offering must be made—a heifer at the least—or the loss of sight is risked. These figures have often served as the supreme arbiters of peace and war among the tribes. Any chief who possessed one and sent it to an enemy at once brought about a cessation of hostilities. The *guara* is carefully enclosed in a case wrapped in wadding, from which it is drawn only once a year to be bathed. The day is marked by festivities and the sacrifice of oxen. The origin of the *guaras* is unknown to the Goajiras, who say that they have possessed them from time immemorial, and inherit them from father to son. There are two which are widely celebrated: one at Samenta, and that of the Cacique Inipara, at Ischamana. Smaller fetishes called *keisesia* are owned by numerous Indians, and partake of the general nature of personal fetishes.[2]

FETISHISM (Indian).—1. Universal prevalence and nature.—Fetishism is a phenomenon of the Animism universally inherent in the religious practices of the population of India. It is a very common superstition of the educated, and part of the actual religion of the uneducated masses, and, of course, of the savages in their daily life. It is thus ubiquitous under the surface of all the formal religious beliefs prevalent in the country, and is present everywhere in the domestic and similar customs and in the folklore of the people. The main cause of its universality is to be sought in the eclecticism of that agglomerate of heterogeneous beliefs, aboriginal and imported, which goes by the generic name of 'Hinduism,' and is the prevailing recognized religion of the people, largely colouring every other form, and in the capacity of that religion for absorbing and assimilating parts of all the ancient faiths that happen to survive among its extremely varied adherents. A secondary but important cause lies in the fact that the popular Muhammadanism of India is, in reality, a graft of that faith on the indigenous Hinduism, retaining practically all the superstitions handed down by Hindu ancestors to converts, who, for the most part, do not count many generations.

But, while fetishism is thus in evidence all over India, it exists there fundamentally in the same sense as it is to be found concurrently with the various forms of religion which obtain in the Western world: discredited by the philosopher and man of education, and unrecognized by the exponents of the official creeds, occupying largely the position of magic and witchcraft and their survivals among Christians. The natives of India, in fact, in adopting the ideas giving rise to the practice of fetishism, have much in common with the inhabitants of nearly every other religion of the civilized world.

2. Definition.—In India the root-idea of the fetish is spirit-possession. The fetish is an object containing an in-dwelling spirit, and thus proper for worship as being capable of influencing the lives of those connected with it. And in pursuance of this idea it may safely be said that the Indian villager adopts as a fetish any conceivable kind of object, especially if it presents an unusual appearance.

(*a*) *Spirit-possession.*—Under the influence of the idea of spirit-possession local fetishes are continually being created. Anything which can be imagined to possess a spirit is sufficient for this purpose: a hollow tree, a heap of stones, rags left on a bush, a ruin by the wayside or in the jungle, an isolated grave or hummock that can be conceived to be a possible grave, even a milestone of the British Government. Any kind of cairn, grave, tomb, or monument will serve as a fetish, those of English men and women being not uncommonly brought into requisition. Once a story of sanctity is started by an honest or casual devotee, or by a wary would-be priest in search of a living, its mere currency is sufficient for all the neighbourhood to believe, for the tale to be embroidered with accretions, and for the place to be provided with a holy legend, a special ritual, and a list of miracles. In a Hindu neighbourhood all the virtues of the fetish are attributed to a godling, hero, or demon; in a Muhammadan neighbourhood, to a saint; among savages, to the spirits. But the sense is every-

where the same: it is held to be wisdom to worship the fetish, because of the power of the spirit within for good or evil. These notions are occasionally carried very far indeed, as in the case of the Nukalsaini or Nikarsinghī *faqīrs* (Nicholson's 'devotees'), who worshipped the well-known General John Nicholson, of Panjāb Frontier and Delhi fame, during his lifetime, despite repeated severe punishments at the hands of their fetish for so doing. This worship is nowadays transferred to his monument in the Mārgallā Pass.

(*b*) *The sacred fire.*—Attribution of a mystical power to a common object in this way has largely brought about the vogue of the sacred fire fetish in India among all sorts and classes of the population, alike at the shrines of the Hindus and Muhammadans and at the holy places of the Dravidian and other non-Aryan savages. Such fire must be ceremonially produced and tended, and it and the ashes it causes will then become worshipful as containing a guardian spirit and curer of disease. But the volcanic fires, meteoric lights, and *ignes fatui* observed in various parts of the country appear to be venerated as manifestations of the powers of evil, and hardly as fetishes proper, though the border line here is not always easy to define.

3. Family and tribal fetishes.—Families, especially when of considerable social position, are peculiarly exposed to fetish worship, and instances are innumerable throughout India of some object possessed by the guardian spirit of the family being held in veneration thereby. Any handy domestic object serves for the abode of such spirits: a stone in the courtyard, an old pestle and mortar, a doorpost, a flower-jar, a specially planted tree or shrub, and so on. On the same principle the Santāls keep sets of prophylactic symbols beside their houses, which represent the abodes of the powers of Nature: pieces of wood, white stones, arrow-heads, and iron tridents. Among the more civilized tribes, but still low down in the social scale, such symbols become rough wooden images set up together in groups, or rude clay models grouped on platforms, which are regularly worshipped as the tribal protectors.

4. Trade and industrial fetishes.—Closely connected with the notion of the family and tribal fetishes are those revered by trades and occupations. The followers of practically every calling among Hindus worship their tools or means of livelihood, actually or symbolically. The object everywhere is the protection of craft interests and, incidentally, cures in general. Instances are as numerous as the occupations. Thus, in various parts of the country, and usually at fixed periods and feasts, sailors will worship their boats; soldiers their swords and other weapons, and, in some Native States, their colours; merchants and bankers their books; clerks their books, pens, and inkstands; grain-merchants their weights daily; farmers their oxen and ploughs; shepherds their sheep; market-gardeners their scales; artisans their tools daily; working-jewellers their pincers and blowpipes; carpenters their yard-measures and also their adzes, chisels, and saws; shoemakers their lasts; tailors their scissors; potters and many other 'low castes' the potter's wheel and moulding-clay for luck; tanners their scrapers; curriers their axes; navvies their mattocks; oilmakers their presses; barbers their razors, scissors, and mirrors; religious mendicants their begging-bowls and bags; dancing girls their musical instruments.

(*a*) *The Ṭhags.*—The most striking instance of a fetish of this description is the pickaxe of the Ṭhags, a criminal brotherhood now suppressed, who gained their livelihood by professional murder by strangling. The pickaxe was the tool used for burying the victims; it was forged with great ceremony, and was especially venerated as the fetish of the association.

(*b*) *The corn-sieve, house-broom, plough, and rice-pounder.*—In India, as elsewhere in the world, the corn-sieve, the house-broom, and the plough are common fetishes connected with marriages and births, as spirit-scarers and symbols of prosperity. To these in India must be added the rice-pounder.

5. Fetish stones.—The commonest kind of fetish in India to come under general observation consists of a stone or stones regarded as representing the village spirit-guardians. These are to be found practically in every village in the country, and are looked upon, according to the degree of civilization of the inhabitants, either as the natural abodes of the guardians themselves or as their symbols, or as representatives of the godlings, who, in their turn, are symbolical of the various powers of Nature. In any case it is considered right and wise to worship them and to treat them with ceremonial reverence. Curious or eccentric form, such as is exhibited by stalactites in caves, is the usual visible sign of spirit-possessed stones, and for this reason many of them are the remains or fragments of ancient and forgotten Buddhist and Hindu carvings, or even pre-historic implements. So also any stone that lends itself by form to phallic worship is sure to be used as a village fetish. In this way, too, meteoric stones, and, in mountain regions, striking rocks, or boulders that glitter or are in any way remarkable by peculiar cleavage or otherwise, become abodes of the gods which attract special worship.

(*a*) *Footprints: viṣṇupāda.* — Miracle-working and worshipful footprints are very common in India, with both ancient and modern attribution of sanctity — among Muhammadans to saints and to Muhammad himself, and among Hindus to all sorts of heroes and godlings. Elaborately carved *viṣṇupāda*, or footprints of Viṣṇu, which are true fetishes, are to be found in several places, and are probably copies of similar footprints of Buddha, common still in all Buddhist countries.

(*b*) *Phallic stones* (*liṅga*): *perforated stones, śālagrāma, grindstones: 'rain' stones.*—The assumption of spirit-possession leads in the ordinary course to that of magical powers available for securing the desire of devotees, and hence of fetishes in general. Hence phallic stones (*liṅga*) in particular are venerated as disease-curers. But the form of stone which is specially associated with the cure of ailments and defects in the human body is that which is naturally or artificially perforated. In addition to the perforated, split, fissured, and tunnelled stones and rocks at shrines and places of pilgrimage, both the *śālagrāma*, a species of ammonite with reputed prophylactic and curative qualities, which is ubiquitous in a religious sense, and the family grindstone must be placed in this category. The same line of reasoning has produced rain-getting stones in parts of the country.

6. Fetish trees and plants.—Fetish trees are almost as common as fetish stones, and the forms that most usually strike the observer are the lotus and the *tulsī* (sweet basil) plant, to be found in or near almost all Hindu dwelling-places. The latter is frequently also grown in conjunction with the *nīm* tree (*Margosa*). The *pīpal* or sacred fig, the *bel* or wood apple, the *ām* (mango), the *sāl*, and the betel-nut (*areca*) palm in S. India are samples of other trees treated as the natural haunts of spirits and therefore worshipped. So, of course, are hollow and unusually large trees, or those that grow in burial and cremation grounds, and the like. Specially dark or 'ghostly' groves are further considered to be the abodes of spirits, and are feared and propitiated accordingly.

7. Fetish myths.—Myths, stories, and legends

about fetishes are, of course, legion, and it is hardly an exaggeration to say that they are as numerous in India as the villages themselves. They are chiefly strictly local folk-tales of a religious cast, usually made up of the traditional incidents peculiar to their class, but occasionally throwing a valuable light on the notions of the people in this connexion. For instance, the great mass of religious legend which attaches to the soil of the Govardhan Hill near Mathura has led to the belief that all its stones are endowed with life. Sometimes such stories acquire a certain general importance, as in the case of the legend of Lorik, a tribal fetish among the widely spread and numerous Ahīr (*q.v.*), brought into vogue to account for the tribe's worship of a particular rock at Benares and of a fissured boulder and an 'elephant' stone near the Mārkundī Pass. Of the same nature and social importance are the very numerous and popular stories to account for the beneficial miracles to be secured at real or reputed shrines and tombs of the more widely known Muhammadan saints, indigenous and imported, such as Sakhī Sarwar, Badru'd-dīn Auliā, Khwājā Khizar, Sālār Ghāzī (Zinda Shāh Madār), Ghausu'l-Azam (Abdu'l-Qādir), Salīm Chishtī, Shaikh Farīd, Shāh Daulā, etc.; or of Hindu godlings, heroes, or holy men, whether of classical antiquity or of comparatively modern or even recent date, such as Bhairon, Bhīmsen, Vetāl, Guru Gorakhnāth, Guru Guggā, Lāl Beg, Jumādī, etc.; or of eclectic mediæval and modern religious reformers, like Kabīr and Rāmānand. Such shrines, tombs, monuments, or 'abodes' contain and constitute real wonder-working fetishes for the whole population, Hindu and Muhammadan alike.

8. Human sacrifices in connexion with fetishism.—There is one point in regard to the ritual connected with fetishism in India that cannot be overlooked in a discussion on the subject. It is the universal practice to smear any and every kind of fetish that can be conveniently so treated with ruddle, or red ochre, or red paint. The bright red stain thus produced represents the blood of sacrifices made to the fetish, which, it is not difficult to show, were originally human. The sacrifice of human beings has been prevalent in India, *sub rosa* at any rate, throughout all historical times to the present day, and there is hardly an important building or architectural structure in the country that has not a story of such a sacrifice connected with its foundation, for the purpose of providing it with a ghostly guardian. Under the influence of civilization and the pressure of governing authorities of various kinds culminating in the fear of British law, actual human sacrifice has taken on modified forms of many sorts until the artificial reddening of the fetish to procure for it the desired power of guardian and curer is all that remains of the original sacrificial ceremony.

Momiāī.—Human sacrifice has given rise to a special fetish known as *momiāī*, still actively believed in and used under the necessary prosaic modifications demanded by British law. But the veritable *momiāī* should consist of the ceremonially distilled fat or essence of a murdered boy, and is believed to be of inestimable value as a cure and prophylactic. At the present day this unfortunate superstition gives rise to an unreasoning political fear in many parts of the country, as its successful concoction is attributed to Europeans. Surgeons with a taste for anatomy, freemasons (always regarded by the ignorant masses as a kind of sorcerers), and anatomical collectors for museums are especially exposed to suspicion in this connexion.

Literature.—There is no book devoted to the subject, but there are very many that may be usefully consulted, among which the following may be specially mentioned: W. Crooke, *PR*², 2 vols., London, 1896, and *TC*, 4 vols., Calcutta, 1896; J. M. Campbell, *Spirit Basis of Belief and Custom*, Priv. Print, Bombay, 1885; E. T. Dalton, *Desc. Ethnol. of Bengal*, Calcutta, 1872; A. C. Lyall, *Asiatic Studies*², 2 vols., London, 1899; Monier-Williams, *Brahmanism and Hinduism*⁴, do. 1891; E. Moor, *Hindu Pantheon*, do. 1810; W. Ward, *History, Lit. and Rel. of the Hindoos*⁵, Madras, 1863; H. H. Wilson, *Works*, 12 vols., London, 1862–77, and *Vishnu Purana*, do. 1840; A. Barth, *Religions of India*, do. 1882; F. S. Growse, *Ramayana of Tulsi Das*,⁵ 8 vols., Cawnpore, 1891; R. C. Dutt, *Hist. of Civilization in Ancient India*, 2 vols., London, 1893; C. Manning, *Ancient and Mediæval India*, 2. vols., do. 1869; F. H. Buchanan, *Eastern India* (ed. R. Montgomery Martin), 3 vols., do. 1838; Rājendralāla Mitra, *Indo-Aryans*, 2 vols., London and Calcutta, 1881; H. H. Risley, *TC*, 2 vols., Calcutta, 1891; E. Thurston, *Castes and Tribes of S. India*, 7 vols., Madras, 1909; M. A. Sherring, *Hindu Tribes and Castes in Benares*, 3 vols., Calcutta, 1872–81; J. Wilson, *Indian Caste*, 2 vols., Bombay, 1877; Meer Hassan Ali, *Obs. on the Mussulmauns of India*, 2 vols., London, 1832; N. Chevers, *Med. Jurisprudence for India*, Calcutta, 1870; H. S. Colebrooke, *Miscell. Essays*², London, 1872; J. Forbes, *Oriental Memoirs*, 2 vols., do. 1813; J. Fergusson, *Hist. of Indian and Eastern Architect.*, ed. Burgess and Spiers, do. 1910, *Tree and Serpent Worship*², do. 1873; W. E. Hearn, *The Aryan Household*, do. 1879; H. B. Rowney, *Wild Tribes of India*, do. 1882; W. J. Wilkins, *Hindu Mythology*, Calcutta, 1882.

An immense quantity of evidence is to be found scattered about in all sorts of books and pamphlets descriptive of the people of India as a whole or in part, esp. the *Gazetteers* (from 1870 onwards) and *Census Reports* (for 1881, 1891, 1901, 1911) of Provinces and Native States; local *Government Reports*, *Settlement Reports*, and official *Handbooks of Districts and Native States*, *Archæol. Survey Reports*, *Madras Manual of Administration* (3 vols.), *Bulletin of the Madras Museum*; *JASBe*, *JRAS*, *JRASBo*, *JRAI*, and publications of the Hakluyt Soc. for early European Travels; *As. Quart. Rev.*, *As. Researches* (early), *IA* (Bombay), *Calcutta Review* (Calcutta), *NINQ*, *PNQ* (both Allahabad, 1883–1891); the old travellers not yet edited by the Hakluyt Soc., *e.g.* F. Bernier, *Travels in the Moghul Empire*, ed. A. Constable, London, 1891; J. B. Tavernier, *Travels in India*, ed. V. Ball, do. 1889; J. A. Mandelslo, *Travels from Persia into the East Indies*, do. 1662; R. Fitch, *Voyage*, ed. J. H. Ryley, do. 1899; T. Herbert, *Travels into Asia and Afrique*, do. 1638; J. Ovington, *Voyage to Surratt, 1689*, do. 1696; E. Terry, *Voyage to East India*, do. 1777; W. Schouten, *Voiage aux Indes Orientales*, Amsterdam, 1707; J. de Thévenot, *Travels*, London, 1687; F. Valentyn, *Oud en Nieuw Oost Indien*, 5 vols., Amsterdam, 1724.

Of more modern travellers the following are examples: Bholanauth Chunder, *Travels of a Hindoo*, 2 vols., London, 1869; J. P. Ferrier, *Caravan Journeys*, do. 1856; G. T. Vigne, *Travels in Kashmir*, etc., 2 vols., do. 1842; K. von Hügel, *aschmir und das Reich der Siek*, 5 vols., Stuttgart, 1840–48 (Eng. tr. 1845); W. Lloyd and A. Gerard, *Caunpoor to the Boorendo Pass*, 2 vols., London, 1840; R. Heber, *Journey through the Upper Prov.*³, 2 vols., do. 1828; W. H. Sleeman, *Journey through Oude*, 2 vols., do. 1858, *Rambles and Recollections*, ed. V. A. Smith, do. 1893; V. Ball, *Jungle Life in India*, do. 1880; J. Forsyth, *Highlands of Central India*², do. 1872.

There are many local descriptive books, *e.g.* D. C. J. Ibbetson, *Panjāb Ethnography*, Calcutta, 1883; G. A. Grierson, *Bihar Peasant Life*, do. 1885; R. C. Temple, *Legends of the Panjāb*, 3 vols., Bombay, 1883–1900, *Proper Names of Panjabis*, do. 1883; M. A. Sherring, *The Sacred City of the Hindus*, London, 1868; W. R. Lawrence, *The Valley of Kashmir*, do. 1895; J. Campbell, *Thirteen Years among the Wild Tribes of Khondistan*, do. 1864; P. Carnegy, *Races, etc., of Oudh*, Lucknow, 1868; S. C. Macpherson, *Report upon the Khonds*, Calcutta, 1842; F. Buchanan, *Journey through Mysore, Canara, and Malabar*, 3 vols., London, 1807; J. Tod, *Annals of Rajast'han*, 2 vols., do. 1829–32; J. Malcolm, *Memoir of Central India*, 2 vols., do. 1823; S. Hislop, *Aboriginal Tribes of Central Prov.*, Nagpur, 1866; F. S. Growse, *Mathura, a District Memoir*³, Allahabad, 1883; H. A. Oldfield, *Sketches from Nipal*, 2 vols., London, 1880; E. J. Gunthorpe, *Criminal Tribes of Bombay, etc.*, Bombay, 1882; G. D. Upreti, *Proverbs and Folklore of Kumaun and Garhwal*, Lodiane, 1894.

Of definitely historical books the following may be noted: H. M. Elliot, *Hist. of India as told by its own Historians*, 8 vols., London, 1867–77; J. Briggs, ed. of Ferishta's *Rise of the Mahomedan Power in India till 1612*, 4 vols., do. 1829; D. Wright, *Hist. of Nepāl*, Cambridge, 1877.

See also translations of vernacular works on the people: D. Shea and A. Troyer, ed. of the *Dābistān*, 3 vols., Paris, 1843; G. A. Herklots, *Qanoon-e-Islam*, London, 1832; Blochmann and Jarrett, ed. of *Āin-i-Akbarī*, 3 vols., Calcutta, 1873–1894; E. Sachau, tr. of al-Bīrūnī, London, 1888. Cf. also the following dictionaries, glossaries, etc.: S. W. Fallon, *Dict. of Hindustāni Proverbs*, ed. R. C. Temple, Benares, 1884, etc.; J. Dowson, *Class. Dict. of Hindu Mythol.*, London, 1879; H. H. Wilson, *Gloss. of Indian Terms*, do. 1855; H. M. Elliot, *Suppl. Gloss. of Indian Terms*, ed. J. Beames, 2 vols., do. 1869; T. P. Hughes, *DI*, do. 1885; E. O'Brien, *Gloss. of Multani Language*, Lahore, 1881; H. A. Rose, *Dict. of Ethnog. Panjāb*, 1911.

Of books devoted to folk-tales, see esp. F. A. Steel and R. C. Temple, *Wideawake Stories*, Bombay, 1884; C. H. Tawney, *Kathā-sarit-sāgara*, Calcutta, 1880; M. Frere, *Old Deccan Days*, London, 1868; L. B. Day, *Folk-tales of Bengal*, do. 1883, *Govinda Sdmanta*, 2 vols, do. 1874; J. H. Knowles, *Folk-tales*

of Kashmir, do. 1888; M. Stokes, *Indian Fairy Tales*, Calcutta, 1879; J. Jacobs, *Indian Fairy Tales*, London, 1892; C. Swynnerton, *Rājā Rasālu*, Calcutta, 1884, and *Romantic Tales from the Panjāb*, London, 1903.

R. C. TEMPLE.

FICHTE.—The philosophical work of Fichte falls into two well-defined divisions, corresponding closely with his periods of residence in Jena and Berlin respectively. The work of the first period is that which has had the greatest influence on subsequent philosophical speculation, for it gave direction to the advance which was made on Kant's position by post-Kantian idealists, while his teaching during the second period was more popular in form and closely bound up with current political events. In the first period we have the *Wissenschaftslehre* (quite inadequately translated as *Theory of Knowledge*), the practical philosophy of the *Theory of Natural Right* (*Naturrecht*) and of the *Ethics* (*Sittenlehre*), and the religious philosophy of the essay *On the Ground of our Belief in the Divine Government of the Universe.* In the second period we find Fichte's final synthesis of *Knowledge* (shown in the *Wissenschaftslehre* to be purely formal), *Will* (established as the ground of reality), and the *Divine Moral Order* (in which the vocation of each individual is grounded).

'From this point onwards the inquiry centres in that divine idea of the world which appears as the guiding principle in the popular works, and which at first sight appears to have no immediate connection with the *Wissenschaftslehre* in its earlier form. In certain minor doctrines, the new expositions differ from the *Wissenschaftslehre* . . . but on the whole we find nothing in them to contradict or supersede the *Wissenschaftslehre.* They contain a wider, more concrete view, to which *Wissenschaftslehre* may be regarded as an introduction' (Adamson, *Fichte*, p. 190).

Before describing the salient features of Fichte's contribution to speculation, we must briefly sketch his life and indicate his chief writings.

1. Life.—Johann Gottlieb Fichte (b. 1762) was the eldest son of a humble handicraftsman at Rammenau in Upper Lusatia, who had married the daughter of a well-to-do manufacturer.

The boy was meditative and earnest, endowed with a remarkable memory, and very fond of reading. These characteristics, along with a certain obstinacy, were to have far-reaching effects upon his life. An accident brought his talents to the notice of a nobleman, who sent him first to a tutor, and then to a monastery-like and antiquated foundation-school at Schulpforta, near Naumberg.

At eighteen years of age he entered the theological faculty at Jena, being transferred, however, to Leipzig in the following year. Theological difficulties, especially those arising out of the relation of Providence to the voluntary action of man, led him to take an eager interest in philosophy, and he frankly adopted the determinist position, in which the reading of Spinoza's *Ethics* only served to confirm him. He was thrown on his own resources even before his University course was completed, and after three years at Leipzig he spent some years as a tutor in various families, first in Saxony, and then in Zürich; it was in Zürich that he met his future wife, a niece of Klopstock. In 1790 he had a hard struggle against poverty in Leipzig, but the autumn of that year brought him more pupils, among them one who desired to study the philosophy of Kant. This was a turning-point in his life.

'A circumstance,' he writes to his betrothed, 'which seemed the result of mere chance, led me to give myself up entirely to the study of the Kantian philosophy—a philosophy which restrains the imagination, always too powerful in me, which gives understanding the sway, and which raises the whole spirit to an indescribable elevation above all earthly considerations. . . . It is difficult beyond all conception, and stands greatly in need of simplification. The principles, it is true, are hard speculations, with no direct bearing upon human life, but their consequences are of the utmost importance for an age whose morality is corrupted at the fountain-head; and to set these consequences before the world in a clear light would, I believe, be doing it a good service. . . . I am now thoroughly convinced that the human will is free, and that to be happy is not the purpose of our being,—but to deserve happiness.'

In 1791, Fichte paid a visit to Kant at Königsberg, and laid before him an essay entitled *Kritik aller Offenbarung*, and by some accident this was published anonymously. The philosophical world, already expecting a work on religion by Kant, assumed that the Königsberg philosopher was the author, with the result that Fichte, once again a private tutor, found his book immediately famous. A tour in Switzerland, after his marriage in 1793, brought him into contact with Pestalozzi and other men of wide reputation. The writing of political pamphlets, and deep reflexion upon the difficulties of the Kantian philosophy, occupied him until, in the spring of 1794, he accepted the post of Extraordinary Professor of Philosophy at Jena, then distinguished as the centre of progressive philosophical and literary movements in Germany. His work at Jena, where his influence among the students was remarkable, was cut short by an unfortunate attack upon him on the ground of his supposed atheism—an attack which he met without much tact. The result was that he resigned the chair, and before long he was compelled to make his way quietly to Berlin. There he at first moved in the circle of Schlegel, Schleiermacher, and others of the Romantic school, but it was not long before he found a more congenial and officially more influential circle of friends. Obtaining permission to lecture in Berlin, he gathered round him an audience containing most distinguished scholars and statesmen. At Erlangen in 1805 he delivered a number of lectures, including the famous course on *The Nature of the Scholar.*

In 1807, at the conclusion of the war with France, which had interrupted his residence in Berlin, Fichte was chosen to frame for the proposed University of Berlin a constitution which should ensure its efficiency and success—a task peculiarly congenial to him. Unfortunately, a change in the management of the scheme led to the rejection of his remarkable and far-sighted proposals.

With patriotic disregard of the risks he was running, he delivered his *Addresses to the German People* during the winter of 1807–8, while Berlin was occupied by the French, and his services towards the regeneration of Prussia were recognized by his election as first Rector of the University of Berlin in 1810. While in the strenuous service of his Fatherland, he was stricken down by a fever contracted from his wife, who had laboured in the overflowing hospitals for five months, and he died on 27th January 1814.

2. Writings.—The *Kritik aller Offenbarung* appeared in 1792; it was an attempt to carry the principles of Kant's critical method into the investigation of the possibility of revealed religion. Its interest lies in the emphasis which Fichte thus early laid upon the practical reason as the clue to speculative problems. In 1794 it was followed by *Über den Begriff der Wissenschaftslehre*, a tract containing a purely formal sketch of his first Jena lectures, which has unfortunately been frequently used as the most adequate source for a knowledge of Fichte's system. While at Jena, Fichte developed his speculative principle (described below) in a series of works dealing with its theoretical and practical grounds and implications, including *Grundlage der gesammten Wissenschaftslehre* (1794), *Grundlage des Naturrechts* (1796), *Erste und zweite Einleitung in die Wissenschaftslehre* (1797), *Versuch einer neuen Darstellung der Wissenschaftslehre* (1797) which expounds the philosophical system as a whole, and *System der Sittenlehre* (1798). After leaving Jena, Fichte came under influences which resulted in a more popular exposition and a less intellectual idealism; the keen dialectic of the *Wissenschaftslehre* made way for the ethical idealism of *Die Bestimmung des Menschen* (1800), the theoretical socialism of *Der geschlossene Handelsstaat* (1801), the elevated spiritual insight of *Über das Wesen des Gelehrten* (1805), the acute analysis

of current culture and thought of *Grundzüge des gegenwärtigen Zeitalters* (1806), and for the bold reconciliation of life and thought in religion which is found in the *Anweisung zum seligen Leben* (1806). When Prussia was invaded in 1805 by Napoleon, Fichte's patriotism, which had led him to make the unsuccessful appeal to be allowed to accompany the Prussian troops as a preacher of 'fire and sword,' found expression in the *Reden an die Deutschen*—addresses which survey the characteristics of the German people out of which the new State may be built up, and expound the steps to be taken in order to utilize the freedom and vitality of the nation.

(1) *THE JENA PERIOD.*—(*a*) *Wissenschaftslehre.*—Fichte's problem was set for him by the unresolved difficulties of Kant's system. By an analysis of knowledge and an investigation of the result, for knowledge, of the existence of the unity of self-consciousness, Kant attempted to explain experience. But the result of his method seemed to be that two elements, each of which has meaning only as related to the other, are equally necessary for experience, though the relation is a purely negative one.

'What Kant, however, does not perceive, is that . . . these two worlds are essentially relative to each other, so that either, taken apart from the other, becomes an empty abstraction. He has, indeed, proved that existence unrelated to a conscious life is such an abstraction. But it is clear that the pure self, in its universality—as opposed to all the matter of the desires—is equally abstract. To will the self, and only the self, is to will nothing at all. Self-consciousness always implies consciousness of something else than self, and could not exist without it. Self-determination, therefore, though it may be relatively opposed to determination by the not-self, cannot be absolutely opposed to it, for with the not-self the self also would disappear' (E. Caird, *Hegel*, Edinburgh, 1896, p. 124 f.).

Fichte refused to start with any abstract notion. Certainty to him rested on intuition, though he meant by intuition neither the Kantian mode of knowing things-in-themselves nor the consciousness of the Absolute (of Schelling), but what he called in his later writings the free activity of the Ego.

The best-known expression of this starting-point is found in the *Grundlage der Wissenschaftslehre*, where it is reached by a highly artificial method, which cannot be reproduced in brief. The procedure is to assume that any one who considers what happens when he calls himself 'I' will find that he is at the same time both object and subject. But this primitive activity of consciousness (its self-affirmation) is known to the Ego only through reflexion, that is, through limitation. In other words, 'the Ego determines' and 'the Ego is determined.' The only solution of this contradiction is found in the proposition 'the Ego partly determines itself and is partly determined.' From this position the theoretical *Wissenschaftslehre* analyzes the necessary modes of intelligence which are involved in the opposition between non-Ego and Ego. Fichte was quite aware, and held, that this has only formal worth. The practical *Wissenschaftslehre* (*Sittenlehre*) makes an advance. If the Ego is to unite the pure activity of self-affirmation and the limited, determined activity, 'it must be an activity which is at the same time, though not in the same sense, finite; it must be an infinite *striving*. Striving implies opposition. . . . Thus the practical activity of the Ego is the ground of the *Anstoss* [opposition], which renders intelligence possible' (Adamson, 177).

(*b*) *Practical philosophy.*—The *Theory of Natural Right* and the *Moral Phil.* are deductions from the first principles of the *Wissenschaftslehre*, and lay down a series of stages marking the realization of the practical Ego. The Ego, on the principles of the earlier investigation, must affirm itself, be aware of its own activity. It can be so aware only in so far as it is practical, willing. 'The practical Ego is the Ego of original self-consciousness; a rational being immediately perceives itself only in willing; and, were it not practical, would perceive neither itself nor the world—would not be an intelligence at all. Will is in a special sense the essence of reason' (*Werke*, iii. 20 f.; and see Adamson, 181). This striving is a feature of consciousness only to the extent that consciousness is limited, and the Ego is really a system of impulses, or strivings partially but not absolutely opposed.

Fichte examines the implications of the principle that the Ego, to be self-consciousness, must affirm itself as acting freely; and his results are his theory of right or rights. Freedom of action involves the existence of a sphere of action, a world against which the activity is to be directed. Fichte further deduces the existence of a plurality of individuals, and the external world is the means of communication between such free intelligences. Still further, the co-existence of such free persons is possible only if they stand in a relation of right and law (*Recht*) to each other. The theory of right establishes (1) primitive right, the right to be not a mere means but a cause (involving personal freedom and property). To assure this right, there must also be (2) right of coercion, the agreement in a commonweal by mutual contract that violations of the former shall be annulled by its contrary. Hence (3) the political rights of free contract, of legislative and of executive authority. Socialist principles regarding State-control of trade, labour, and money are deduced (cf. the *Geschlossene Handelsstaat*). The system of rights arises from the conflict of the freedom of one subject with that of others; similarly, the conflict of motives in any one person gives rise to the system of duties of Fichte's *Theory of Morals or Duties* (*Sittenlehre*). The pure spring of action, the tendency to freedom for the sake of freedom, finds beside it the instinct of self-preservation, the aim of which is enjoyment, not freedom. Fichte points out that these are not really contradictory; transcendentally, they are both expressions of the fundamental activity of the Ego. Their union is effected when an act materially (by obedience to the natural principle) regards the world of sense, and formally (obeying the pure principle) affirms freedom from the world of sense. But the Ego, so long as it remains a self-conscious Ego, cannot be completely free from limitation, so that the moral end lies in infinity. Moral action is, therefore, a series of acts, no one of which is indifferent; the moral vocation of man is not one definite thing, but a series of vocations, and the moral law is, 'Continually fulfil your vocation.' Conscience is the feeling of harmony in a given case between the empirical and the pure Ego, an assurance immediately given.

(*c*) *Philosophy of religion.*—In his first Essay in the critical style, the *Critique of all Revelation*, Fichte attempted to apply the critical principles to the question of the possibility, the form, and the content of any revelation, thus filling a gap in the Kantian system. The importance of this Essay lies in the stress which he already lays upon the practical side of that system. Within the earlier system of Fichte there was no place for the conception of God as creative, or as personal. Kant had shown the possibility of the existence of Natural Religion, as involved in the necessity of the practical postulates of God and immortality; Revealed Religion, Fichte tried to show, rests upon the morally imperfect condition of those to whom the revelation is made, and any revelation must be in harmony with the moral law. It is of the Divine moral law, not of God, that we read in the treatise which led to Fichte's removal from Jena. Belief in the moral order of the universe is belief in God, and there is no other; only by reason of the necessities of intelligence do we regard this order as substance or person.

(2) *THE BERLIN PERIOD.*—(*a*) *The Nature of Man.*—The harmony which Fichte had tried to establish between cognition and will, by means of the conception of the moral order, received during the Berlin period more elaborate treatment; the *Wissenschaftslehre*, so often taken as Fichte's last word, is merely introductory to the whole of what is contained in the *Popular Works*. The clearest exposition of the later synthesis is found in *Die Bestimmung des Menschen* of 1800 (*Pop. Works*, i. 321 ff.). The three sections of this work—Doubt, Knowledge, and Faith—state the positions of Naturalism, Theoretical Idealism, and Practical (or Ethical) Idealism. Naturalism leaves us with the conflict of natural necessity and freedom, Knowledge is shown to be purely formal; but in the third book the end of existence is declared to be not knowledge, but action.

In the section entitled 'Faith,' Fichte shows that the attempt to analyze the feeling of free activity by reason only, revives the sceptical doubts described in the section entitled 'Doubt.' We must simply accept the impulse to independence, and realize that 'thought is not supreme, but founded on our striving energies.' 'The true dignity of my understanding fills me with

reverence. It is no longer the deceptive mirror which reflects a series of empty pictures, proceeding from nothing and tending to nothing; it is bestowed upon me for a great purpose. Its cultivation for this purposo is entrusted to me; it is placed in my hands, and at my hands it will be required.' 'We do not act because we know, but we know because we are called upon to act. The practical reason is the root of all reason.'

The moral results which follow from this position are clear. 'Not merely to know, but according to thy knowledge to do, is thy vocation.' Fichte would, however, have us remember that others also are busy doing. 'Assume it as already known that they can give a purpose to their own being wholly by themselves, and independently of thee; never interrupt the accomplishment of this purpose, but rather further it to the utmost of thy power.' The vocation of the race is to form itself into one single body, each part of which shall be in intimate contact with every other. All has tended to this end, and much of the way is already passed over. Man has attained to a more comprehensive, more energetic freedom. 'When once every useful discovery made at one end of the earth is at once communicated to all other parts, then, without further interruption, with united strength and equal step, humanity shall move onward to a higher culture, of which we can at present form no conception.' But an even greater Order appears; the Eternal World, in which we are and live even now, the world in which Will is the first link in a chain of consequences that stretches through the whole invisible realms of spirit, rises before ns. God, the Divine Will, is the bond of union between finite wills within that world, and our true life is a life of active endeavour to co-operate with other willing persons, fulfilling our respective vocations while respecting their freedom, guided by conscience, which is the felt harmony between the natnral tendency and the tendency to freedom.

Creative life reveals itself in a different shape in each corner of the universe as the power by which we ourselves were formed. Here it streams as self-creating and self-forming matter through human veins and muscles, and pours out its abundance into the tree, the plant, and the grass. There it leaps and dances as spontaneous activity in the animal, and appears in ever-new forms. 'Everything that lives and moves follows this universal impulse.' Through that which to others seemed a mere dead mass, Fichte saw this life rising in ever-increasing growth, no longer the ever-recurring circle, or the eternally repeated play. 'It is not Death that kills, but the more living Life which, concealed behind the former, bursts forth into new development. Death and Birth are but the struggle of Life with itself to assume a more glorious and congenial form.'

(*b*) *The Way of the Blessed Life* (tr. under that title in the *Popular Works*).—This deals with the ultimate question of the relation of finite spirits to the universe of which they are parts. In the second part of that work, Fichte offers a history of the different stages (distinguishing five) of that reflexion by which the relation is apprehended. The first three stages are those described in *The Nature of Man*, where it is shown that the life of Faith is the acceptance of, and self-sacrifice for, the ideas on which rest art, science, and political life. But man can rise yet higher, for his failure to realize the Divine Will in his own action forces him in upon himself, so that he may comprehend what that is which he loves and after which he strives. Man so lives that 'in the conduct of each individnal there may be manifested purely that form which the Divine nature has assumed in this particular individual; that each individual may recognize God as He is ontwardly manifested in the condnct of all other men; that all others may recognize God as He is manifested in the conduct of this particnlar individual; and that thus God alone may be ever manifested in all outward appearance.' The fifth and last stage is that in which the finite spirit apprehends in thonght the intimate relations in which he and all other finite spirits are bound together in one community of free intelligences, moved and upheld by one purpose.

LITERATURE.—*Werke*, the collected works, 11 vols., edited and arranged by Fichte's son, I. H. Fichte (vols. i.–viii., Bonn, 1845–46, and vols. ix.–xi., 1834–35); *The Popular Works of J. G. Fichte*[4], tr. W. Smith, 2 vols., London, 1889, with a memoir of the author prepared from materials derived from *J. G. Fichte's Leben und literarischer Briefwechsel*[2], by I. H. Fichte, 2 vols., Leipzig, 1862; *The Science of Rights* and *The Science of Knowledge*, tr. A. E. Kroeger, with introd. by W. T. Harris, London, 1889; *On the Nature of the Scholar* and *The Characteristics of the Present Age*, tr. W. Smith, both contained in the *Popular Works* already mentioned; C. C. Everett, *Fichte's Science of Knowledge*, Chicago, 1884; R. Adamson, *Fichte*, London, 1881 (see also his *Development of Modern Philosophy*, Edinb. and Lond. 1908); F. C. A. Schwegler, *Hist. of Phil.*, tr. with a note by J. H. Stirling, Edinburgh, 1867 (see also other Histories of Philosophy, notably those of K. Fischer, Erdmann, and Windelband); T. Carlyle, *On Heroes*, Lect. vi.; A. Lasson, *J. G. Fichte im Verhältniss zu Kirche und Staat*, Berlin, 1863; F. Zimmer, *J. G. Fichte's Religionsphilosophie*, Berlin, 1878.
